

# enumext

ENUMERATE EXERCISE SHEETS

V2.2 2026-06-01<sup>\*</sup>

©2024–2026 by Pablo González L<sup>†</sup>

CTAN: <https://www.ctan.org/pkg/enumext>

 <https://github.com/pablgonz/enumext>

## Abstract

This package provides enumerated list environments compatible with *tagging* PDF for creating “*simple exercise sheets*” along with “*multiple choice questions*”, storing the “*answers*” to these in memory using *multicol* package.

## Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>	5.7	Keys for multicol	11
1.1	Description and usage	2	5.8	Keys for minipage	12
1.2	The concept of left margin	3	5.8.1	The command <code>\miniright</code>	12
1.3	User interface	3	5.8.2	The key <code>mini-right</code>	12
1.3.1	Public counters	3	<b>6</b>	<b>The storage system</b>	12
1.3.2	Public dimension	3	6.1	Keys for storage system	12
1.3.3	Support for multicol	3	6.1.1	Keys for <code>label</code> and <code>ref</code>	13
1.3.4	Support for minipage	4	6.1.2	Keys for wrap and marks	13
1.3.5	The <code>\label</code> and <code>\ref</code> system	4	6.1.3	Keys for debug and checking	14
1.3.6	Support for <code>\footnote</code>	4	6.2	The command <code>\anskey</code>	14
<b>2</b>	<b>The environments provided</b>	<b>5</b>	6.2.1	Keys for <code>\anskey</code>	15
2.1	The environment <code>enumext</code>	5	6.3	The environment <code>anskey*</code>	15
2.2	The environment <code>enumext*</code>	5	6.3.1	Keys for <code>anskey*</code>	15
2.3	The command <code>\item*</code>	5	6.4	The environment <code>keyans</code>	16
2.3.1	Keys for <code>\item*</code>	6	6.4.1	The <code>\item*</code> in <code>keyans</code>	17
2.4	The command <code>\item</code> in <code>enumext*</code>	6	6.5	The environment <code>keyanspic</code>	17
<b>3</b>	<b>The command <code>\setenumext</code></b>	<b>6</b>	6.5.1	Keys for <code>keyanspic</code>	18
<b>4</b>	<b>The command <code>\setenumextmeta</code></b>	<b>6</b>	6.5.2	The command <code>\anspic</code>	18
<b>5</b>	<b>The keyval system</b>	<b>7</b>	6.6	Printing stored content	19

			<b>14</b>	<b>Index of Implementation</b>	<b>152</b>

## Motivation and acknowledgments

Usually, it is enough to use the classic `enumerate` environment to generate “*simple exercise sheets*” or “*multiple choice questions*”, the basic idea behind `enumext` is to cover three points:

1. To have a simple interface to be able to write “*lists of exercises*” with “*answers*”.
2. To have a simple interface for writing “*multiple choice questions*”.
3. To have a simple interface for placing “*columns*” and “*drawings*” or “*tables*”.

This package would not be possible without Phelype Oleinik who has collaborated and adapted a large part of the code and all  $\text{\LaTeX}$  team for their great work and to the different members of the  $\text{\TeX-SX}$  community who have provided great answers and ideas. Here are notes on the main ones:

1. Answer given by Alan Munn in `\topsep`, `\itemsep`, `\partopsep`, `\parsep` - what do they each mean (and what about the bottom)?
2. Answer given by Enrico Gregorio in [Understanding minipages - aligning at top](#)
3. Answer given by Ulrich Diez in [Different mechanics of hyperlink vs. hyperref](#)
4. Answer given by Enrico Gregorio in [Minipage and multicol, vertical alignment](#)

<sup>\*</sup>This file describes a documentation for v2.2, last revised 2026-06-01.

License and Requirements

Permission is granted to copy, distribute and/or modify this software under the terms of the LaTeX Project Public License (lpl), version 1.3 or later (<https://www.latex-project.org/lpl.txt>). The software has the status “maintained”.  
The enumext package loads and requires multicol[3] package, need to have a modern T<sub>E</sub>X distribution such as T<sub>E</sub>X Live or MiK<sub>T</sub>TeX. It has been tested with the standard classes provided by L<sup>A</sup>T<sub>E</sub>X: book, report, article and letter on 10pt, 11pt and 12pt.

The minimum requirement is L<sup>A</sup>T<sub>E</sub>X release 2026-06-01.

1 Introduction

In the L<sup>A</sup>T<sub>E</sub>X world there are many useful packages and classes for creating “lists of exercises”, “worksheets” or “multiple choice questions”, classes like exam[1] and packages like xsim[2] do the job perfectly, but they don’t always fit the basic day to day needs.

In my work (and in the work of many teachers) it is common to use “simple exercise sheets” also known as “informal lists of exercises”, for example:

1. Factor  $x^2 - 2x + 1$

2. Factor  $3x + 3y + 3z$

3. True False

(a)  $\alpha > \delta$

(b) L<sup>A</sup>T<sub>E</sub>Xze is cool?

4. Related to Linux
- (a) You use Linux?

(b) Usually uses the package manager?

(c) Rate the following package and class

i. xsim-exam

ii. xsim

iii. exsheets

Sometimes we are also interested in showing the “answers” along with the questions:

1. Factor  $x^2 - 2x + 1$ 

\* 

$(x - 1)^2$

2. Factor  $3x + 3y + 3z$ 

\* 

$3(x + y + z)$

3. True False

(a)  $\alpha > \delta$ 

\* 

False

(b) L<sup>A</sup>T<sub>E</sub>Xze is cool?

\* 

Very True!

4. Related to Linux
- (a) You use Linux?

\* 

Yes

(b) Usually uses the package manager?

\* 

Yes, dnf

(c) Rate the following package and class

i. xsim-exam

\* 

doesn’t exist for now :(

ii. xsim

\* 

very good

iii. exsheets

\* 

obsolete

Or we are interested in referring to a specific question and its “answer”, for example:

The answer to 3.(b) is “Very True!” and the answer to 4.(c).ii is “very good”.

Or we are interested in printing all the “answers”:

1.  $(x - 1)^2$ 

⌘

2.  $3(x + y + z)$ 

⌘

3. (a) False

(b) Very True!

⌘

4. (a) Yes

⌘
- (b) Yes, dnf

⌘

(c) i. doesn’t exist for now :(

⌘

ii. very good

⌘

iii. obsolete

⌘

Another very common thing to use in my work is “multiple choice questions”, for example:

1. First type of questions

A) value

C) value

B) correct

D) value

2. Second type of questions

I.  $2\alpha + 2\delta = 90^\circ$

II.  $\alpha = \delta$

III.  $\angle EDF = 45^\circ$

A) I only

D) I and III only

B) II only

E) I, II, and III

C) I and II only

★ 3. Third type of questions

(1)  $2\alpha + 2\delta = 90^\circ$

(2)  $\angle EDF = 45^\circ$

A) value

D) value

B) value

E) value

C) value

4. Question with image and label below:

A

A)

B

B)

A

C)

A

D)

E)

5. Question with image on right side:

A) value

B) value

C) value

D) correct

E) value

B
- ©2024–2026 by Pablo González L
- 2 / 168

Where we are interested in the `\label` and a “short note” that we leave as an explanation, and then print them:

1. B)  $x = 5$

2. D)

3. C) some note
- ⌘ 4. E) A duck

⌘ 5. D) “other note”

⌘

The `enumext` package was created and designed to meet these small requirements in the creation of “simple worksheets” and “multiple choice questions”.

- These “simple worksheets” or “multiple choice questions” appear to be easy to obtain using a combination of the `enumerate`, `minipage` and `multicols` environments, but like many things, what “looks simple” is not so simple.

1.1 Description and usage

The `enumext` package defines enumerated environments using the `list` environment provided by  $\text{\TeX}$ , but “does not redefine” any internal commands associated with it such as `\list`, `\endlist` or `\item` outside of the “scope” in which they are defined.

- This package is NOT intended to replace the `enumerate` environment nor replace the powerful `enumitem`[6], the approach is intended to work without hindering either of them.

This package can be used with `xelatex`, `lualatex`, `pdflatex` and the classical `latex`»`dvips`»`ps2pdf` and is present in  $\text{\TeX}$  Live and  $\text{MiK}\text{\TeX}$ , use the package manager to install. For manual installation, download `enumext.zip` and unzip it, run `luatex enumext.ins` and move all files to appropriate locations, then run `mktexlsr`. To produce the documentation run `arara enumext.dtx`.

<code>enumext.sty</code>	»	<code>TDS:tex/latex/enumext/</code>
<code>enumext.pdf</code>	»	<code>TDS:doc/latex/enumext/</code>
<code>README.md</code>	»	<code>TDS:doc/latex/enumext/</code>
<code>enumext.dtx</code>	»	<code>TDS:source/latex/enumext/</code>
<code>enumext.ins</code>	»	<code>TDS:source/latex/enumext/</code>

The package is loaded in the usual way:

```
\usepackage{enumext}
```

1.2 The concept of left margin

There is a direct relationship between the parameters `\leftmargin`, `\itemindent`, `\labelwidth` and `\labelsep` plus an “extra space”, which makes it difficult to obtain the desired *horizontal spaces* in a `list` environment. Usually we don’t want the `list` to go beyond the left margin of the page, but since these four values are related, that causes a problem.

The `enumitem`[6] package adds the `\labelindent` parameter to solve some of these problems. A simplified representation of this in the figure 1.

Figure 1: Representation of horizontal lengths in `enumitem`.

The `enumext` package does NOT provide a user interface to set the values for `\leftmargin` and `\itemindent`, instead it provides the keys `list-offset` and `list-indent` which internally set the values for `\leftmargin` and `\itemindent`. The concepts of `\leftmargin` and `\itemindent` are different in `enumext`. The figure 2 shows the visual representation of idea.

Figure 2: Representation of horizontal lengths concept in `enumext`.

In this way we reduce a *little* the amount of parameters we have to pass. With the default values of keys `list-offset`, `list-indent`, `labelwidth` and `labelsep` the lists will have the (usually) expected output for “simple worksheets”. The figure 3 shows the visual representation.

Figure 3: Default horizontal lengths `list-offset=0pt`, `list-indent=\labelwidth+\labelsep` in `enumext`.

1.3 User interface

The user interface consists of two main list environments `enumext` (vertical) and `enumext*` (horizontal), the environment `anskey*` and the command `\anskey` to “store content” and the environments `keyans`, `keyans*` and `keyanspic` for multiple choice. It also provides the commands `\getkeyans` to print individual stored content, `\printkeyans` to print all stored content, `\foreachkeyans` to print a range of stored content, `\miniright` for `minipage`, `\setenumext` to config [`\key = val`], `\setenumextmeta` to add a “meta-key” and `\resetenumext` to reset counters.

1.3.1 Public counters

The package `enumext` uses the `enumXi`, `enumXii`, `enumXiii`, `enumXiv` counters for the *four* nesting levels of the `enumext` environment, the `enumXv` counter for the `keyans` environment, the `enumXvi` counter for the `keyanspic` environment, the counter `enumXvii` for `enumext*` environment and the counter `enumXviii` for `keyans*` environment.

- If any package defines these *counters* or they are user-defined in the document, the package will return a “fatal error” and abort the load.

1.3.2 Public dimension

The package `enumext` only provides a *single public dimension* `\itemwidth` and is intended for user convenience only and is NOT for internal use as such. The dimension `\itemwidth` is a *rigid length* and contains the “width of the content” of each `\item` regardless of `labelwidth` and `labelsep`.

- If any package defines `\itemwidth` or the user defines `\itemwidth` in the document, the package will overwrite it without warning.

1.3.3 Support for multicol

The package provides direct support for using the `multicol`[3] package. This allows for a two-column output as shown in the figure 4.

Figure 4: Representation of the two column output for a nested level in `enumext` environment.

The “non starred” version of the `multicols` environment is always used together with the `\raggedcolumns` command and is controlled by `columns` and `columns-sep` keys. It can be used in all nesting levels of the environment `enumext` and the environment `keyans` and can together with the `mini-env` key. If you need to force a start a new column `\columnbreak` must be used (see §5.7).

- The `\columnseprule` command is not available as a key and is set to “zero” for the inner levels and the `keyans` environment. If the value of this is set inside the document, it will affect “all environments” that use the `columns` key.

1.3.4 Support for minipage

The package provides direct support for `minipage` environment, this allows you to obtain an output like the one shown in figure 5.

Figure 5: Representation of the `mini-env` output for a nested level `enumext` environment.

The `minipage` environments on the “left side” and “right side” are always used with “aligned on top” [`t`]. It can be used in all nesting levels of the environment `enumext` and the environment `keyans` and is controlled by `mini-env` and `mini-sep` keys. In order to switch from the “left” side `minipage` environment to the “right” side one must use the command `\miniright` (see §5.8).

1.3.5 The \label and \ref system

This package provides a user interface like the `enumitem`[6] package to customize the references which is activated by the `ref` key (§5.1), the standard  $\LaTeX$  `\label` and `\ref` commands work as usual. It also provides an “internal reference” system for the “stored content” by means of the key `save-ref` (§6.1.1) when the key `save-ans` is active (§6.1).

1.3.6 Support for \footnote

The `enumext*` and `keyans*` environments and the `mini-env` key use the `minipage` environment in their implementation but in a transparent way for the user, it is only used for typesetting. The implementation supports `\footnote` and is compatible with `hyperref` and works the same way as if used anywhere in the document.

Unfortunately, if `hyperref` is loaded and `tagged` PDF is not active, it will not produce the “links”, the internal implementation uses `\footnotetext[⟨number⟩]` and `\footnotemark[⟨number⟩]{⟨text⟩}` and “links” for this are not supported by the `hyperref` package.

The best way to solve this if `tagged` PDF is NOT active is to use Jean-François Burnol’s `footnotehyper`[9] package. It will support keeping the “links” if `hyperref` is loaded with the `hyperfootnotes=true` option (default). Load it as follows:

```
\IfDocumentMetadataF
{
  \usepackage{footnotehyper}
  \makesavenoteenv{enumext}
  \makesavenoteenv{enumext*}
}
```

At the moment the `footnotehyper` package v1.1f (2025/11/15) is not compatible with `tagged` PDF.

2 The environments provided

The package `enumext` provides two main list environments, the *vertical* environment `enumext` and the *horizontal* environment `enumext*`.

<code>enumext</code>	<code>\begin{enumext}[⟨keyval list⟩]</code>	<code>\begin{enumext*}[⟨keyval list⟩]</code>
<code>enumext*</code>	<code>\item ⟨item content⟩</code>	<code>\item ⟨item content⟩</code>
	<code>\item[⟨custom⟩] ⟨item content⟩</code>	<code>\item[⟨custom⟩] ⟨item content⟩</code>
	<code>\item*[⟨symbol⟩][⟨offset⟩] ⟨item content⟩</code>	<code>\item*[⟨symbol⟩][⟨offset⟩] ⟨item content⟩</code>
	<code>\end{enumext}</code>	<code>\end{enumext*}</code>

2.1 The environment enumext

The `enumext` is an environment that works in the same way as the standard `enumerate` environment provided by L<sup>A</sup>T<sub>E</sub>X, `\item` and `\item[⟨custom⟩]` commands work in the usual way. The environment can be nested with at most “four levels” and the options can be configured globally using `\setenumext` command and locally using `[⟨key = val⟩]` in the environment.

Example with `columns=2`

1. This text is in the first level.
- A. This text is in the fourth level.
- (a) This text is in the second level.
- X This text is in the first level.
- i. This text is in the third level.
- ★ 2. This text is in the first level.

2.2 The environment enumext\*

The `enumext*` is a *horizontal list environment* similar to the `shortenumerate` or `tasks` environments provided by the `shortlst`[16] and `tasks`[17] packages, `\item` and `\item[⟨custom⟩]` work as usual. The options can be configured globally using `\setenumext` command and locally using `[⟨key = val⟩]` in the environment.

Some considerations to take into account for this environment:

- The environment cannot be nested within itself or in the environment `keyans*`, but it can be nested within `enumext` and vice versa.
- Each “item content” in the environment is placed within a `minipage` environment whose *width* is stored in the dimension `\itemwidth` does NOT include `labelwidth` and `labelsep`, only the *width of the content*.
- You cannot have floating environments like `figure` or `table` or `\marginpar` but `\footnote` with `hyperref` is supported. If you want to activate links “without” `tagged` PDF active you must load `footnotehyper` and `hyperref` packages (see §1.3.6).
- You cannot have any standard list environments like `itemize`, `enumerate`, `description`, `quote`, `quotation`, `verse`, `center`, `flushleft`, `flushright`, `verbatim`, `tabbing`, `trivlist`, `list` and all environments created with `\newtheorem`.

Example with `columns=2`

1. This text is in the first level.
2. This text is in the first level.
- X This text is in the first level.
- ★ 4. This text is in the first level.

2.3 The command \item\*

<code>\item*</code>	<code>\item*[⟨symbol⟩][⟨offset⟩]</code>
---------------------	-----------------------------------------

The `\item*`, `\item*[⟨symbol⟩]` and `\item*[⟨symbol⟩][⟨offset⟩]` works like the numbered `\item`, but places a `⟨symbol⟩` to the “left” of the `⟨label⟩` separated from it by the `⟨offset⟩` set by the the *second optional argument*. The *starred argument* “\*” cannot be separated by spaces ‘`␣`’ from the command, i.e. `\item*` and the *first optional argument* does NOT support *verbatim content*. It can be configured with the keys `item-sym*` and `item-pos*` locally in the environment or globally using `\setenumext` command (§3).

• The behavior of `\item*` in the `enumext` and `enumext*` environments is NOT the same as in the `keyans` and `keyans*` environments.

2.3.1 Keys for `\item*`

`item-sym*` = { $\langle symbol \rangle$ } default: `\textborn`  
Sets the *symbol* to be displayed to the “left” of the box containing the current  $\langle label \rangle$  set by `labelwidth` key for `\item*` in `enumext` and `enumext*`. The *symbol* can be in *text* or *math* mode, for example `item-sym*={\star}`.

`item-pos*` = { $\langle rigid length \rangle$ } default: *by levels*  
Sets the *offset* between the box containing the current  $\langle label \rangle$  defined by `labelwidth` key and the  $\langle symbol \rangle$  set by `item-sym*` key. The default values are set by `labelsep` key at each level. If positive values are passed, it will *offset to the left*; if negative values are passed it will *offset to the right*.

2.4 The command `\item` in `enumext*`

The `\item` command for the `enumext*` environment provides a “first optional argument” `\item( $\langle columns \rangle$ )` which “joins items” between columns. Let’s consider the following examples adapted directly from the `tasks` package:

```
\begin{enumext*}[widest=10,columns=4]
  \item The first
  \item* The second
  \item The third
  \item The fourth
  \item(3)* The fifth item is way too long for this and needs three columns
  \item The sixth
  \item The seventh
  \item(2)[X] The eighth item is way too long for this and needs two columns
    (\the\itemwidth)
  \item The ninth
  \item[Z] The tenth (\the\itemwidth)
\end{enumext*}
```

1. The first
- ★ 2. The second
3. The third
4. The fourth
- ★ 5. The fifth item is way too long for this and needs three columns
6. The sixth
7. The seventh
- X 8. The eighth item is way too long for this and needs two columns (196.17749pt)
9. The ninth
- Z 10. The tenth (89.28171pt)

3 The command `\setenumext`

<code>\setenumext</code>	<code>\setenumext{<math>\langle key = val \rangle</math>}</code>	<code>\setenumext[<math>\langle keyans* \rangle</math>]{<math>\langle key = val \rangle</math>}</code>
	<code>\setenumext[<math>\langle enumext, level \rangle</math>]{<math>\langle key = val \rangle</math>}</code>	<code>\setenumext[<math>\langle print, level \rangle</math>]{<math>\langle key = val \rangle</math>}</code>
	<code>\setenumext[<math>\langle enumext* \rangle</math>]{<math>\langle key = val \rangle</math>}</code>	<code>\setenumext[<math>\langle print, * \rangle</math>]{<math>\langle key = val \rangle</math>}</code>
	<code>\setenumext[<math>\langle keyans \rangle</math>]{<math>\langle key = val \rangle</math>}</code>	<code>\setenumext[<math>\langle print* \rangle</math>]{<math>\langle key = val \rangle</math>}</code>

The command `\setenumext` sets the  $\langle keys \rangle$  on a global basis for environments `enumext`, `enumext*`, `keyans`, `keyans*` and the `\printkeyans` command. It can be used both in the preamble and in the body of the document as many times as desired.

The  $\langle keys \rangle$  set in the *optional argument* of environments and commands have the *highest precedence*, overriding both options passed by `\setenumext`. If the *optional argument* is not passed, the *first level* of the environment `enumext` will be taken by default.

• For security reasons the keys `resume` “with value”, `resume*`, `reset`, `reset*`, `series` and `save-ans` they can NOT be set by this command and are ignored. The key `save-ans` that activate the “storage system” must be passed directly in the *optional argument* of the “first level” of the environment in which they are executed.

4 The command `\setenumextmeta`

<code>\setenumextmeta</code>	<code>\setenumextmeta[<math>\langle 1 \rangle</math>]{<math>\langle key name \rangle</math>}{<math>\langle key-one = val, key-two = val, ... \rangle</math>}</code>
	<code>\setenumextmeta[<math>\langle 2 \rangle</math>]{<math>\langle key name \rangle</math>}{<math>\langle key-one = val, key-two = val, ... \rangle</math>}</code>
	<code>\setenumextmeta[<math>\langle 3 \rangle</math>]{<math>\langle key name \rangle</math>}{<math>\langle key-one = val, key-two = val, ... \rangle</math>}</code>
	<code>\setenumextmeta[<math>\langle 4 \rangle</math>]{<math>\langle key name \rangle</math>}{<math>\langle key-one = val, key-two = val, ... \rangle</math>}</code>
	<code>\setenumextmeta[<math>\langle * \rangle</math>]{<math>\langle key name \rangle</math>}{<math>\langle key-one = val, key-two = val, ... \rangle</math>}</code>
	<code>\setenumextmeta*{<math>\langle key name \rangle</math>}{<math>\langle key-one = val, key-two = val, ... \rangle</math>}</code>

The command `\setenumextmeta` adds a new “meta-key” for the environments `enumext` and `enumext*`, the  $\{ \langle key name \rangle \}$  must be different from those defined by the package. The *optional argument* of the form `[1]`, `[2]`, `[3]`, `[4]` adds a new “meta-key” for levels `1`, `2`, `3` and `4` of the `enumext` environment, the form `[*]` adds a new “meta-key” for the `enumext*` environment. If it is run *without* the *optional argument*, it will add a new “meta-key” for the “first level” of the `enumext` environment.

The *starred argument* ‘\*’ will create the new “meta-key” for the environment `enumext*` and for “all levels” of the environment `enumext`. For example: `\setenumextmeta*{midsep}{topsep=3pt, partopsep=0pt}` will create a new key `midsep` available for all levels of the `enumext` environment and the `enumext*` environment and we can use it like any other key so `\begin{enumext}[midsep]` and `\begin{enumext*}[midsep]` will be valid.

## 5 The keyval system

The `<key = val>` system used by the `enumext` package is implemented using `l3keys` so it must be noted that `<keys>` marked as “value forbidden”, that is `<key>` is different from `<key=>`.

All `<keys>` described in this section are available for the `enumext`, `enumext*`, `keyans` and `keyans*` environments with the exception of the keys `series`, `resume`, `resume*`, `reset` and `reset*` which are only available for the `enumext` and `enumext*` environments; and the keys `mini-right`, `mini-right*` which are only available for the `enumext*` and `keyans*` environments.

All `<keys>` related to vertical or horizontal spacing accept a “skip” or “dim” expression if passed between braces, i.e. you do not need to use `\dimeval` or `\dimexpr` to perform calculations.

- It should be kept in mind that using any `<key>` that sets *rubber lengths* or *rigid lengths* for vertical or horizontal space on a level will influence the vertical and horizontal space for *inners levels* and `keyans`, `keyans*` and `keyanspic` environments.

### 5.1 Keys for label and ref

`mode-box` `<value forbidden>` default: not used

This is a “switch-key” that does not receive an argument and is “only” available for the “first level” of the `enumext` environment and the `enumext*` environment. When this is set the `label`, `font`, `wrap-label` and `wrap-label*` keys are executed within `\makebox` for the `enumext` and `keyans` environments.

- This key is intended for compatibility with tagged PDF and is forcibly “enabled” when `\DocumentMetadata` is present. If you want to get the same document output whether `\DocumentMetadata` is active or not, you must enable this key.
- In the `enumext*` and `keyans*` environments `\makelabel` is redefined using `\makebox` by default. If `enumext` or `keyans` is used in the `enumext*` environment the key must be activated manually.

`label = {<\alph* | \Alph* | \arabic* | \roman* | \Roman*>}` default: by levels

Sets the `<label>` that will be printed at the *current level* and default value for `labelwidth` key. The default value for the first level of the environments `enumext` and `enumext*` is `\arabic*`, for second level are `(\alph*)`, for third level are `\roman*` and for fourth level is `\Alph*`. For `keyans` and `keyans*` environments the default value is `\Alph*`.

- This key is intended to give the basic structure with which the `<label>` will be displayed, and the form in which it is used by standard “label and ref” and the “internal label and ref” system with the `save-ref` key. You cannot use commands with `<label>` as an argument, for example `\emph{<\alph*>}` will return an error. For full customization of how `<label>` is displayed use the `font`, `wrap-label` and/or `wrap-label*` keys.

`labelsep = {<rigid length>}` default: 0.3333em

Sets the *horizontal space* between the box containing the current `<label>` defined by `label` key and the text of an item on the first line. Internally sets the value of `\labelsep` for the current level.

`labelwidth = {<rigid length>}` default: by label

Sets the *width* of the label box containing the current `<label>` set by the `label` key. Internally sets the value of `\labelwidth` for the current level. The default values are calculated by means of the *width* of a box by setting a *value* to the current counter set by `label` key using ‘0’ for `\arabic*`, ‘M’ for `\Alph*`, ‘m’ for `\alph*`, ‘VIII’ for `\Roman*` and ‘viii’ for `\roman*`.

`widest = {<integer | string>}` default: empty

Sets the `labelwidth` key passing the `<integer>` or converting the `<string>` of the form `\Alph`, `\alph`, `\Roman` or `\roman` to a *value* for the current counter defined by `label` key, then calculating the *width* by means of a box. For example `widest={XXIII}` or `widest={23}` are equivalent. This key is useful when the default values of the `labelwidth` key are smaller than those actually used.

`font = {<font commands>}` default: empty

Sets the *font style* for the current `<label>` defined by `label` key. You cannot use commands with an argument, for example `font={\small\textbf{#1}}` will return an error, but `font={\bfseries\small}` it will work. For full customization of how `<label>` is displayed use `wrap-label` and/or `wrap-label*` keys.

`align = {<left | right | center>}` default: left

Sets the *aligned* of `<label>` defined by `label` key on the current level in the label box of width set by `labelwidth`.

`wrap-label = {<code {#1} more code>}` default: empty

Wraps the *current* `<label>` defined by `label` key referenced by `{#1}` after executing the `align` and `font` keys. The `{<code>}` must be passed between braces and it does not modify the value set by the `labelwidth` key and is applied *only* on `\item` and `\item*`. When using it in the `\setenumext` command it is necessary to use the *double* ‘`##1`’. For example `wrap-label={\fbox{#1}}` or you can create a command:

```

\NewDocumentCommand \mywrap { s m }
{
  \IfBooleanTF{#1}
  {\textcolor{red}{\textbf{Q}}\textcolor{blue}{\textbf{.}}\textcolor{gray}{#2}}
  {\textcolor{blue}{\textbf{Q}}\textcolor{red}{\textbf{.}}\textcolor{gray}{#2}}
}

```

and then pass it through the key `wrap-label={\mywrap{#1}}` or `wrap-label={\mywrap*{#1}}`.

`wrap-label* = {⟨code {#1} more code⟩}` default: *empty*

The same as the `wrap-label` key but also applies on `\item[⟨custom⟩]`.

`ref = {⟨code {\alph*|\Alph*|\arabic*|\roman*|\Roman*} more code⟩}` default: *empty*

Modifies the way *cross references* are displayed. The `label` key sets the default form of the *cross references*, by using this key you can define a different format, for example: `ref=\emph{⟨\alph*⟩}` is valid.

Internally it renews the command associated with each counter when it is executed, i.e., in the environment `enumext` the command `\theenumXi` is modified when the key is executed at the first level, `\theenumXii` when it is executed at the second level and `\theenumXiii` together with `\theenumXiv` when it is executed at the third and fourth levels.

- This must be kept in mind, since the values set by the `label` and `ref` keys are not cumulative by levels, so if you have used the `ref` key in the first level and then want to associate the counter with `label` or `ref` in the second level you must use the direct commands, i.e. `\arabic{enumXi}` to indicate the count of the first level instead of using `\theenumXi`.

## 5.2 Keys for penalties

Page breaks in the provided environments are controlled by the following three parameters, which work together to ensure they look good, avoiding unsightly page breaks that could distort the output.

`beginpenalty = {⟨integer⟩}` default: *-51*

Set the *page breaking* penalty for breaking at the beginning of the `enumext`, `enumext*`, `keyans` and `keyans*` environments. Internally sets the value of `\@beginparpenalty`.

`midpenalty = {⟨integer⟩}` default: *-51*

Set the *page breaking* penalty for breaking between items of the `enumext`, `enumext*`, `keyans` and `keyans*` environments. Internally sets the value of `\@itempenalty`.

`endpenalty = {⟨integer⟩}` default: *-51*

Set the *page breaking* penalty for breaking at the end of the `enumext`, `enumext*`, `keyans` and `keyans*` environments. Internally sets the value of `\@endparpenalty`.

- The values passed to these *⟨keys⟩* affect the nested environments in which they were set and cannot be reset.  $\text{\LaTeX}$  default is `-\@lowpenalty`, that is, *-51*. Because it is negative, it somewhat encourages a page break at each spot. Change it with, e.g., `\@beginparpenalty=9999`; a value of *10000* prohibits a page break. Please, refer to your  $\text{\LaTeX}$  or  $\text{\TeX}$  manual about how penalties control page breaks.

## 5.3 Keys for spaces

`show-length = {⟨true|false⟩}` default: *false*

Displays on the terminal the values for *all list parameters* at the current level. For *vertical spaces* show the values of `\topsep`, `\itemsep`, `\parsep` and `\partopsep`. For *horizontal spaces* show the values of `\labelwidth`, `\labelsep`, `\itemindent`, `\listparindent` and `\leftmargin`.

### 5.3.1 Vertical spaces

`topsep = {⟨rubber length|rigid length⟩}` default: *by levels*

Set the *vertical space* added to both the top and bottom of the list. Internally sets the value of `\topsep` for the current level. The default value for the first level of the environments `enumext` and `enumext*` are *8.0pt* plus *2.0pt* minus *4.0pt*, for second level are *4.0pt* plus *2.0pt* minus *1.0pt*, for third and fourth level are *2.0pt* plus *1.0pt* minus *1.0pt*. For `keyans` and `keyans*` environments the default value is *4.0pt* plus *2.0pt* minus *1.0pt*.

`parsep = {⟨rubber length|rigid length⟩}` default: *by levels*

Set the *vertical space* between paragraphs within an item. Internally sets the value of `\parsep` for the current level. The default value for the first level of the environments `enumext` and `enumext*` are *4.0pt* plus *2.0pt* minus *1.0pt*, for second level are *2.0pt* plus *1.0pt* minus *1.0pt*, for third and fourth level are *0pt*. For `keyans` and `keyans*` environments the default value is *2.0pt* plus *1.0pt* minus *1.0pt*.

- In the `enumext*` and `keyans*` environments this value is passed to `\parskip` within the `minipage` environment where “item content” is placed.

`partopsep = {⟨rubber length|rigid length⟩}` default: *by levels*

Set the *vertical space* added, beyond `topsep`, to the “top” and “bottom” of the entire environment if the environment instance is preceded by a “blank line” or `\par` command. Internally sets the value of `\partopsep` for the current level. The default values for first and second level in environment `enumext` are *2.0pt* plus *1.0pt* minus *1.0pt*, for third and fourth level are *1.0pt* minus *1.0pt*. For the `keyans` environment the

default value is  $2.0\text{pt}$  plus  $1.0\text{pt}$  minus  $1.0\text{pt}$ , and for the `keyans*` and `enumext*` environments it is available but *without* effect.

- The value of this parameter also affects the *inner levels* and the environments `keyans`, `keyanspic` and `keyans*`. Caution should be taken with “blank lines” or `\par` command “before” each environment or nested level when formatting the source code of document.  $\TeX$  will enter *vertical mode* and apply this value to the “top” and “bottom” the environment or nested level.

`itemsep` = { *rubber length* | *rigid length* } default: *by levels*

Set the *vertical space* between items, beyond the `parsep`. Internally sets the value of `\itemsep` for the current level. The default value for the first level of the environments `enumext` and `enumext*` are  $4.0\text{pt}$  plus  $2.0\text{pt}$  minus  $1.0\text{pt}$ , for the rest of the levels are  $2.0\text{pt}$  plus  $1.0\text{pt}$  minus  $1.0\text{pt}$ . For `keyans` and `keyans*` environments the default value is  $4.0\text{pt}$  plus  $2.0\text{pt}$  minus  $1.0\text{pt}$ .

- In the `enumext*` and `keyans*` environments this value corresponds to the separation between rows.

`noitemsep` *value forbidden* default: *not used*

This is a “meta-key” that does not receive an argument. Set `itemsep` and `parsep` equal to  $0\text{pt}$  the entire level of environment.

`nosep` *value forbidden* default: *not used*

This is a “meta-key” that does not receive an argument. Sets all keys for vertical spacing equal to  $0\text{pt}$  the entire level of environment.

`base-fix` *value forbidden* default: *not used*

This is a “switch-key” that does not receive an argument available *only* for the “first level” of environment `enumext`. Fix the *baseline* when an environment `enumext` is nested in `enumext*` and there is no material between the `\item` and the start of the environment for example `\item \begin{enumext}` within the environment `enumext*`. Internally sets the keys `topsep`, `above` and `above*` at  $0\text{pt}$ .

- This key is provided as a way to work around this minor issue, but you should be aware that if for some reason you have the `itemindent` key set in the `enumext*` environment it will be lost and you will need to adjust it using the `list-offset` key in the `enumext` environment.

### Extra vertical spaces

- The following *keys* should be used with “caution”, they are intended to be used at the “top” and “bottom” of the environment when the `columns` or `mini-env` keys do not provide adequate *vertical spaces*. The values passed can be *rubber* or *rigid* lengths, the way they are applied is the way you differ, using the star ‘\*’ *keys* applies `\vspace*` so that  $\TeX$  does *not discard* this space at page break.

`above` = { *rubber length* | *rigid length* } default: *not used*

Set the *extra vertical space* added, beyond `topsep`, to the top of the entire level of environment. This key is intended to give a “fine adjustment” of the vertical space “above” the environment without hindering the value of the `topsep` key. The space is added with `\vspace` so is “discordable”.

`above*` = { *rubber length* | *rigid length* } default: *not used*

Set the *extra vertical space* added, beyond `topsep`, to the top of the entire level of environment. This key is intended to give a “fine adjustment” of the vertical space “above” the environment without hindering the value of the `topsep` key. The space is added with `\vspace*` so is “not discordable”.

`below` = { *rubber length* | *rigid length* } default: *not used*

Set the *extra vertical space* space added, beyond `topsep`, to the bottom of the entire level of environment. This key is intended to give a “fine adjustment” of the vertical space on the “below” the environment without hindering the value of the `topsep` key. The space is added with `\vspace` so is “discordable”.

`below*` = { *rubber length* | *rigid length* } default: *not used*

Set the *extra vertical space* space added, beyond `topsep`, to the bottom of the entire level of environment. This key is intended to give a “fine adjustment” of the vertical space on the “below” the environment without hindering the value of the `topsep` key. The space is added with `\vspace*` so is “not discordable”.

### 5.3.2 Horizontal spaces

`list-offset` = { *rigid length* } default:  $0\text{pt}$

Sets the *horizontal translation* of the entire environment level from the left edge of the box defined by the `labelwidth` key. Internally sets the values of `\leftmargin` and `\itemindent` for the current level.

`list-indent` = { *rigid length* } default: `labelwidth + labelsep`

Sets the *indentation* of the whole environment under the box defined by `labelwidth` and `labelsep` keys. Internally sets the value of `\leftmargin` and `\itemindent` for the current level. If `list-indent=0pt` is set in the environments `enumext` and `keyans` the *label* will be part of the text, separated by the value of the `labelsep` key and the *first word*, in simple terms it will look like a “common paragraph”.

- The `enumext*` and `keyans*` environments are implemented using `\makebox` and `minipage` which causes “list indent” to always be equal to the value passed to `labelwidth` plus `labelsep`. Passing a value to this key is equivalent to setting the value for the `list-offset` key.

`itemindent` = {*rigid length*} default: *0pt*

Sets the extra *horizontal indentation*, beyond `labelsep`, of the “*first line*” of each `\item` that is not followed by a “*blank line*” or the `\par` command. This value must be greater than or equal to *0pt* and is applied internally using `\hspace` without modifying the value of `\itemindent`.

- This key is intended for the `enumext*` and `keyans*` environments where, by their implementation, it is not possible to adjust `labelwidth` and `list-indent` without modifying the output. If you use `enumext` or `keyans` and want to get around the *blank line* limitation or the `\par` command followed by `\item` you can modify `labelwidth` and `list-indent` and get the same effect.

`rightmargin` = {*rigid length*} default: *0pt*

Set the *horizontal space* between the right margin of the environment and the right margin of the enclosing environment, the value it takes must be greater than or equal to *0pt*. Internally sets the value of `\rightmargin` for the current level.

`listparindent` = {*rigid length*} default: *0pt*

Sets the *horizontal space* indentation, beyond `list-indent`, for second and subsequent paragraphs within a list item. Internally sets the value of `\listparindent` for the current level.

- In the `enumext*` and `keyans*` environments this value is passed to `\parindent` within the `minipage` environment where “*item content*” is placed.

## 5.4 Keys for add code

The following *keys* should be used with “*caution*”, they are intended to inject `{\code}` into different parts of the defined environments. We must keep in mind that the defined environments are based on the `list` base environment provided by  $\text{\TeX}$  which is defined (simplified) as plain form `\list{\arg one}{\arg two}`. Using the `before*` key does not allow access to the `list` parameters defined by `[\key = val]`.

`before` = {*code*} default: *not used*

Execute `{\code}` “*before*” the environment starts. The `{\code}` must be passed between braces, is executed “*after*” all calculations related to the *list parameters* in the environment and the *keys* sets by `[\key = val]` have been performed, that is, in the *second argument* of the list: `\begin{list}{\arg one}{\arg two}{\code}`.

`before*` = {*code*} default: *not used*

Execute `{\code}` “*before*” the environment starts. The `{\code}` must be passed between braces, is executed “*before*” performing all calculations related to the *list parameters* and the *keys* sets in `[\key = val]` of the environment that is, “*before*” the arguments defining the list environment are executed: `{\code}\begin{list}{\arg one}{\arg two}`.

`first` = {*code*} default: *not used*

Executes `{\code}` when “*starting*” the environment. The `{\code}` must be passed between braces, is executed right “*after*” all *list parameters* are done, after the second argument of list, just before the first occurrence of `\item`: `\begin{list}{\arg one}{\arg two}{\code}\item`.

- Keep in mind that the `{\code}` set in this *key* will affect the entire “*body*” of the environment and therefore the inner levels of the list and the `keyans`, `keyans*` and `keyanspic` environments. It is recommended to set this *key* per level. In the `enumext*` and `keyans*` environments this *key* is executed “*after*” the `listparindent`, `parsep` and `itemindent` *keys* within the `minipage` environment in which the “*item content*” is placed. Making modifications to `\setcounter` in these environments using this *key* will not have the expected effect.

`after` = {*code*} default: *not used*

Execute `{\code}` “*after*” finishing the environment. The `{\code}` must be passed between braces.

## 5.5 Keys for start, series and resume

`start` = {*integer* | *integer expression*} default: *1*

Sets the *start value* of the numbering on the “*current level*”. The `{\integer expression}` must be passed between braces, internally is evaluated and pass to the “*counter*” defined by `label` key on the current level, i.e. it is equivalent to enter `start={\dimeval{100*\value{chapter}}}` or `start={100*\value{chapter}}`.

`start*` = {*integer* | *string*} default: *not used*

Sets the *start value* of the numbering on the “*current level*”. Internally *string* is converted and passed as value to the “*counter*” defined by `label` key on the current level, i.e. it is equivalent to enter `start*=5`, `start*=E` or `start*=v`.

- The *start value* in `enumext` and `keyans` are set in the *second argument* of the `list` environment and “*before*” the execution of the keys `before` and `first`, but in the `enumext*` and `keyans*` it is set much later: `\begin{list}{\arg one}{\arg two}\setcounter`.

- The following *keys* are available only for the `enumext` and `enumext*` environments.

`series` = {*series name*} default: *not used*

Stores the *keys* of the *optional argument* of the “*current level*” of the environment in which it is executed in `{\series name}` which is used as an *argument* in the `resume` key. The *keys* stored in `{\series name}` are NOT cumulative and are overwritten if the same `{\series name}` is used again at the “*same level*” at which the key was executed.

- For security reasons the `series` key will never save in  $\{\langle series\ name\rangle\}$  the  $\langle keys\rangle$  series, `resume`, `resume*`, `reset`, `reset*`, `save-ans`, `save-key`, `start*` and `start`.

`resume` =  $\{\langle series\ name\rangle\}$

default: *not used*

Sets the *start value* and *options* for the “current level” continuing the numbering and *options* of the “same level” as the environment in which the `series`= $\{\langle series\ name\rangle\}$  key was executed, the *start value* will continue numbering according to the last execution of `resume`= $\{\langle series\ name\rangle\}$ . If passed “without value” this will only set *start value* continue the numbering of the “same level” from the last environment and level in which `series`= $\{\langle series\ name\rangle\}$  or `resume`= $\{\langle series\ name\rangle\}$  is NOT present and if the `save-ans` key is active (on the left) it will continue the numbering from the “last” environment in which it was executed. The *start value* can be overwritten using `start` or `start*` keys.

- The `resume` key passed “without value” must be exactly “without value”, i.e. `resume`= cannot be used and if executed before `resume*` it will affect the *start value*.

`resume*`  $\langle value\ forbidden\rangle$

default: *not used*

Sets the *start value* and *options* for the “current level” continuing the numbering and *options* of the “same level” as the last environment and level in which the `series`= $\{\langle series\ name\rangle\}$  or `resume`= $\{\langle series\ name\rangle\}$  keys are NOT present and if the `save-ans` key is active (on the left) it will continue the numbering and *options* from the “last” environment in which it was executed. The *start value* can be overwritten using `start` or `start*` keys.

- When using the key `resume`= $\{\langle series\ name\rangle\}$  or `resume*` you will have hierarchy in the  $\langle keys\rangle$  that are stored in  $\{\langle series\ name\rangle\}$  or in an internal version of  $\{\langle series\ name\rangle\}$  in the case of `resume*`. If you want to *reset* the value of a  $\langle key\rangle$  that is already stored in  $\{\langle series\ name\rangle\}$  or in an internal version of  $\{\langle series\ name\rangle\}$  this must be placed to the *right* of the key `resume`= $\{\langle series\ name\rangle\}$  or `resume*`.

- When the `resume*` key is executed consecutively, it does not rewrite the  $\langle keys\rangle$  stored in the internal version of  $\{\langle series\ name\rangle\}$  and if the environment that precedes it does not have the *optional argument*, it will just continue with the numbering.

## 5.6 Keys for reset

`reset`  $\langle value\ forbidden\rangle$

default: *not used*

Resets the *start value* of the “counters” in the `enumext` and `enumext*` environments along with the “internal counters” used by the `resume without value` and `resume*` keys at the “level” at which it is executed. The *start value* can be overwritten using the `start` or `start*` keys.

`reset*`  $\langle value\ forbidden\rangle$

default: *not used*

Resets the *start value* of the “counters” in the `enumext` and `enumext*` environments along with the “internal counters” used by the `resume without value` and `resume*` keys at the “level” at which it is executed and in the “levels below” it in the case of the `enumext` environment. The *start value* can be overwritten using the `start` or `start*` keys.

- These keys are intended to be used in cases where the `\resetenumext` command does not work, e.g. after an unnumbered chapter. It should preferably be set *only* on the *first level*, although it is available for all levels.

### 5.6.1 The command `\resetenumext`

<code>\resetenumext</code>	<code>\resetenumext[<math>\langle 1\rangle</math>]{<math>\langle some\ counter\rangle</math>}</code>	<code>\resetenumext[<math>\langle 4\rangle</math>]{<math>\langle some\ counter\rangle</math>}</code>
	<code>\resetenumext[<math>\langle 2\rangle</math>]{<math>\langle some\ counter\rangle</math>}</code>	<code>\resetenumext[<math>\langle *\rangle</math>]{<math>\langle some\ counter\rangle</math>}</code>
	<code>\resetenumext[<math>\langle 3\rangle</math>]{<math>\langle some\ counter\rangle</math>}</code>	<code>\resetenumext*{<math>\langle some\ counter\rangle</math>}</code>

The `\resetenumext` command “resets” the *start value* of the “counters” for the `enumext` and `enumext*` environments along with the “internal counters” used by the keys `resume without value` and `resume*` according to the value of  $\{\langle some\ counter\rangle\}$ . For example `\resetenumext{chapter}` will “reset” the numbering of “all levels” of the `enumext` environment for each execution of a “numbered” chapter.

The *optional argument* of the form  $\langle 1\rangle$ ,  $\langle 2\rangle$ ,  $\langle 3\rangle$ ,  $\langle 4\rangle$  “reset” the values for levels 1, 2, 3 and 4 of the `enumext` environment, the form  $\langle *\rangle$  “reset” the values for the `enumext*` environment. If is run *without* the *optional argument*, it will “reset” the values for “all levels” of the `enumext` environment.

The *starred argument* ‘ $\ast$ ’ will “reset” the values for “all levels” of the `enumext` and `enumext*` environments.

## 5.7 Keys for multicol

`columns` =  $\{\langle integer\rangle\}$

default: 1

Set the *number of columns* to be used by the `multicols` environment within the environments `enumext` and `keyans`. The value must be a positive integer less than or equal to 10. In the `enumext*` and `keyans*` environments they correspond to the default number of columns (without joining) and internally adjust the value of `\itemwidth`.

`columns-sep` =  $\{\langle rigid\ length\rangle\}$

default: *by level*

Set the *space between columns* used by the `multicols` environment within the environments `enumext` and `keyans`. Internally sets the value of `\columnsep`, by default its value is equal to the sum of the values set in the keys `labelwidth` and `labelsep` of the current level. In the `enumext*` and `keyans*` environments they correspond to the *space between columns* (without joining) and internally adjust the value of `\itemwidth`.

## 5.8 Keys for minipage

`mini-env = {⟨rigid length⟩}`

default: *not used*

Sets the *width* of the `minipage` environment on the “right side”. This value added to the value set by the `mini-sep` key to determines the *width* of the `minipage` environment on the “left side”, taking `\linewidth` as the maximum reference value.

`mini-sep = {⟨rigid length⟩}`

default: `0.3333em`

Sets the *space between* the `minipage` environment on the “left side” and the `minipage` environment on the “right side”. This separation is applied together with `\hfill`.

### 5.8.1 The command `\miniright`

---

```
\miniright \begin{enumext}[mini-env={⟨rigid length⟩}] ⟨item's before⟩ \item \miniright ⟨content⟩ \end{enumext}
\begin{enumext}[mini-env={⟨rigid length⟩}] ⟨item's before⟩ \item \miniright*⟨content⟩ \end{enumext}
```

---

The `\miniright` command close the `minipage` environment on the “left side” and opens the `minipage` environment on the “right side” by starting it with the `\centering` command. It must be placed “after” the last `\item` of the current environment and “before” starting the material to be placed on the “right side”.

The starred argument “\*” inhibits the use of `\centering` command i.e. the usual  $\TeX$  justification is maintained in the `minipage` on the “right side”.

### 5.8.2 The key `mini-right`

In the *horizontal list environments* `enumext*` and `keyans*` it is not possible to use the `\miniright` command and the `mini-right` key must be used instead.

`mini-right = {⟨content⟩}`

default: *not used*

Set the *content* for the drawing or tabular to be placed in the `minipage` environment on the “right side” by starting it with `\centering`. The `{⟨content⟩}` must be passed between braces.

`mini-right* = {⟨content⟩}`

default: *not used*

Same as above, but *without* starting with `\centering`.

## 6 The storage system

The entire mechanism for “*storing content*” it is activated according to `save-ans` key on the “*first level*” of `enumext` or `enumext*` environments and it is ignored if they are established when they are nested inside each other. Only when this `⟨key⟩` is “*active*” the `\anskey` command and the environments `anskey*`, `keyans`, `keyans*` and `keyanspic` are available.

<pre>\begin{enumext}[save-ans={⟨store name⟩}]   \item Text \anskey{answer}   \item Text     \begin{keyans}       ...     \end{keyans} \end{enumext}</pre>	<pre>\begin{enumext}[save-ans={⟨store name⟩}]   \item Text \anskey{answer}   \item Text     \begin{keyanspic}       ...     \end{keyanspic} \end{enumext}</pre>
-----------------------------------------------------------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------

By executing the key `save-ans={⟨store name⟩}` the entire “*structure*” of the environment (excluding the *first level*) including the *optional argument* passed to the inner levels or the environment nested in it, along with the `⟨content⟩` passed to `\anskey` or `anskey*`, the current `⟨labels⟩` for `\item*` and `\anspic*` in the environments `keyans`, `keyans*` and `keyanspic` will be “*stored*” in a *sequence* `{⟨store name⟩}` and at the same time will be “*stored*” (without the “*structure*” or *optional argument*) in a *prop list* `{⟨store name⟩}`.

For security reasons the *optional argument* of the inner levels or the nested environment are *filtered* by excluding all `⟨keys⟩` related to the “*storage system*” (§6.1) along with the keys `mini-env`, `mini-sep`, `mini-right`, `mini-right*`, `series`, `resume` and `resume*` when storing in *sequence* `{⟨store name⟩}` set by `save-ans` key.

### 6.1 Keys for storage system

The only `⟨keys⟩` available for all levels of the `enumext` environment and the `enumext*` environment are `no-store` and `save-key`, the rest of the `⟨keys⟩` described in this section must be passed directly in the *optional argument* of the “*first level*” of the environment in which the key `save-ans` is executed. The key `save-ans` should NOT be passed with the command `\setenumext`.

`save-ans = {⟨store name⟩}`

default: *not set*

Sets the *name* of the *sequence* and *prop list* in which the `{⟨contents⟩}` will be “*stored*” by `\anskey` and `anskey*` in `enumext` and `enumext*` environments and the current `⟨labels⟩` for `\item*` and `\anspic*` in the environments `keyans`, `keyans*` and `keyanspic`. If the *sequence* or *prop list* `{⟨store name⟩}` does not exist, it will be created globally and will not be *overwritten* if the key is used again.

`save-key = {⟨key list⟩}`

default: *not set*

This key *overrides* the default “*stored keys*” of the *optional argument* of the inner levels or nested environment that will be passed to the *sequence* `{⟨store name⟩}` set by `save-ans` key. The `⟨key list⟩` passed to this key ignores any `⟨keys⟩` in the “*stored structure*” and must be passed between braces. For example, if we execute at a second level:

```

\begin{enumext}[save-ans={\langle store name \rangle}]
  \item Text \anskey{answer}
  \item Text
  \begin{enumext}[nosep, columns=2, save-key={columns=3}]
    ...
  \end{enumext}
\end{enumext}

```

The “stored keys” by default in the sequence  $\{\langle store name \rangle\}$  would be `nosep` and `columns=2`, but using the key `save-key={columns=3}` will overwrite and the “stored key” in the sequence  $\{\langle store name \rangle\}$  are only `columns=3` ignoring all the others.

`save-sep` =  $\{\langle text symbol \rangle\}$  default:  $\{, \}$

Sets the *text symbol* that will separate the current  $\langle label \rangle$  to the *optional argument* passed to the `\item*` and `\anspic*` in the environments `keyans`, `keyans*` and `keyanspic` and storing them in the *sequence* and *prop list*  $\{\langle store name \rangle\}$  set by `save-ans` key. The  $\{\langle text symbol \rangle\}$  must always be passed between braces, whitespace ‘`␣`’ is preserved within the braces and only affects the “stored content” and not what is displayed when using the `show-ans` or `show-pos` keys.

`no-store`  $\langle value forbidden \rangle$  default: *not used*

This is a “switch-key” that does not receive an argument and disables the “storing content” in the *sequence* and *prop list*  $\{\langle store name \rangle\}$  set by `save-ans` key at the entire level or a nested environment in which it runs. This key is intended for use in internal levels or nested `enumext` or `enumext*` environments in which you want to use `enumext` or `enumext*` but “without” using the `\anskey` command or use `anskey*` environment and “without” interfering with the `check-ans` key.

### 6.1.1 Keys for label and ref

`save-ref` =  $\{\langle true | false \rangle\}$  default: *false*

Activates the “internal label and ref” mechanism for referencing “stored content” in *prop list*  $\{\langle store name \rangle\}$  set by `save-ans` key. To reference the location of the “stored content” within the environment you must use `\ref{\langle store name : position \rangle}`, where  $\langle position \rangle$  corresponds to the position occupied by the “stored content” in the *prop list*  $\{\langle store name \rangle\}$  returned by the `show-pos` key. For example `\ref{test:4}` will return `3`. (b) which corresponds to the location of the “stored content” at position `4` in *prop list* `test` within the environment in which the key `save-ans=test` was set.

`mark-ref` =  $\{\langle symbol \rangle\}$  default: `\textreferencemark`

Sets the *symbol* that will be displayed by the `\printkeyans` command only if the `hyperref` package is detected and the `save-ref` key are active. This “symbol” is used as a “link” between the environment in which the `save-ans` key was used and the place where the command is executed.

### 6.1.2 Keys for wrap and marks

The `enumext` package provides a set of  $\langle keys \rangle$  to set and manipulate “symbol marks” associated with “answers” and how they are displayed and stored in the *sequence* and *prop list*.

The  $\langle keys \rangle$  available for the `\anskey` command and the `anskey*` environment can be passed “only” in the *optional argument* in the “first level” of the `enumext` or `enumext*` environment.

The  $\langle keys \rangle$  available for the `keyans` and `keyans*` environments can be passed locally in the *optional argument*, at the “first level” of the `enumext` or `enumext*` environment or via the `\setenumext` command with one minor difference, when  $\langle keys \rangle$  are passed through the “first level” of the `enumext` or `enumext*` environment they are set in “both” environments, but when they are passed using the `\setenumext` command they are set “individually” in each environment.

`show-ans` =  $\{\langle true | false \rangle\}$  default: *false*

Display the *symbol* set by the `mark-ans` key to the left of the *mandatory argument*  $\langle content \rangle$  passed to the `\anskey` command and  $\langle body \rangle$  for the `anskey*` environment using the `wrap-ans` key if set. For `\item*` and `\anspic*` the `keyans`, `keyans*` and `keyanspic` environments it will display the *symbol* set by the `mark-ans*` key to the left of the current  $\langle label \rangle$  and *optional argument*. If the *optional argument* is present in `\item*` or `\anspic*` it will be shown using `wrap-opt` key.

### Keys for \anskey and anskey\*

`mark-ans` =  $\{\langle symbol \rangle\}$  default: `\textasteriskcentered`

Sets the *symbol* to be displayed in the left margin for `\anskey` command and `anskey*` environment when using the key `show-ans`. The “symbol” is placed in a box of width equal to the value of `labelwidth` at the current level, separated by the value of the key `mark-sep` and aligned by the value of the key `mark-pos`. This key is not affected by the keys `font` or `wrap-label` so if you want to apply *styling* you have to do it directly, for example: `mark-ans={\textcolor{red}{\textbf{\textasteriskcentered}}}`.

`mark-pos` =  $\{\langle left | right | center \rangle\}$  default: *left*

Sets the *aligned* of the “symbol” defined by `mark-ans` key for `\anskey` command and `anskey*` environment. The “symbol” is aligned in a box with the same dimensions of the label box defined by `labelwidth` key on the current level and separated by the value of the `mark-sep` key.

`mark-sep = {⟨rigid length⟩}` default: `labelsep`  
 Sets the *horizontal space* between the box containing the “symbol” defined by `mark-ans` key and the *mandatory argument* ⟨*content*⟩ passed to the `\anskey` command and the ⟨*body*⟩ in `anskey*` environment.

`wrap-ans = {⟨code {#1} more code⟩}` default: `\fbox+\parbox{#1}`  
 Wraps the *mandatory argument* ⟨*content*⟩ passed to the `\anskey` and the ⟨*body*⟩ in `anskey*` environment referenced by {#1} when using the `show-ans` or `show-pos` keys. The {⟨*code*⟩} must be passed between braces and only affects how the ⟨*content*⟩ or ⟨*body*⟩ is displayed and NOT the “stored content” in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. If this key is passed using `\setenumext` it is necessary to use double ‘{##1}’.

### Keys for `keyans`, `keyans*` and `keyanspic`

`mark-ans* = {⟨symbol⟩}` default: `\textasteriskcentered`  
 Sets the *symbol* to be displayed in the left margin for `\item*` and `\anspic*` for the `keyans`, `keyans*` and `keyanspic` environments when using the key `show-ans`. The “symbol” is placed in a box of width equal to the value of `labelwidth` of the environment in which it is executed, separated by the value of the key `mark-sep*` and aligned by the value of the key `mark-pos*`. This key is not affected by the keys `font` or `wrap-label` so if you want to apply *styling* you have to do it directly, for example:  
`mark-ans*={\textcolor{red}{\textbf{\textasteriskcentered}}}`.

`mark-pos* = {⟨left | right | center⟩}` default: `left`  
 Sets the *aligned* of the “symbol” defined by `mark-ans*` key for the `keyans`, `keyans*` and `keyanspic` environments. The “symbol” is aligned in a box with the same dimensions of the label box defined by `labelwidth` key of the environment in which it is executed and separated by the value of the `mark-sep*` key.

`mark-sep* = {⟨rigid length⟩}` default: `labelsep`  
 Sets the *horizontal space* between the box containing the “symbol” defined by `mark-ans*` key and the current ⟨*label*⟩ for `\item*` and `\anspic*` in the `keyans`, `keyans*` and `keyanspic` environments.

`wrap-ans* = {⟨code {#1} more code⟩}` default: `not used`  
 Wraps the *current* ⟨*label*⟩ when using the `show-ans` key for `\item*` and `\anspic*` referenced by {#1} in the `keyans`, `keyans*` and `keyanspic` environments after executing the `align` and `font` keys. The {⟨*code*⟩} must be passed between braces and *only* affects how the ⟨*label*⟩ is displayed and NOT the “stored label” in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. This key overwrites the key `wrap-label` and if is passed using `\setenumext` it is necessary to use double ‘{##1}’. For example, if you want the ⟨*label*⟩ to be displayed in red when using `show-ans` you just set `wrap-ans*={\textcolor{red}{#1}}`.

`wrap-opt = {⟨code {#1} more code⟩}` default: `[{#1}]`  
 Wraps the *optional argument* passed to the `\item*` and `\anspic*` referenced by {#1} in the `keyans`, `keyans*` and `keyanspic` environments when using the `show-ans` or `show-pos` keys. The {⟨*code*⟩} must be passed between braces and only affects the current *optional argument* and NOT the “stored content” in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. If this key is passed using `\setenumext` it is necessary to use double ‘{##1}’.

### 6.1.3 Keys for debug and checking

`show-pos = {⟨true | false⟩}` default: `false`  
 Displays the *position* occupied by the “stored content” by `\anskey`, `anskey*`, `\item*` and `\anspic*` in the *prop list* {⟨*store name*⟩} set by `save-ans` key. This position is used by the `\getkeyans` command and by the `\ref` command if the `save-ref` key is active.

`check-ans = {⟨true | false⟩}` default: `false`  
 Enables the *checking answer* mechanism displaying an appropriate message on the terminal. This key works under the logic that each `\item` or `\item*` that does not open an inner level or nested environment contains “only one answer” or “only one execution” of the `\anskey` or `anskey*`. It is intended to be used in conjunction with the `no-store` key.

## 6.2 The command `\anskey`

---

`\anskey` `\anskey[⟨keys⟩]{⟨content⟩}`

The command `\anskey` takes a mandatory non empty argument {⟨*content*⟩} and “stores” it in the *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key. By design the command cannot be nested or passed *verbatim material* in the argument and it is assumed that each *numbered* `\item` or `\item*` within the environment in which it is active it has a “single execution” of `\anskey` unless `\item` or `\item*` open a nested level or use the `no-store` key.

If `save-ref` key are active and the `hyperref`[8] package is detected, `\hyperlink` and `\hypertarget` will be used, otherwise the usual “label and ref” system provided by L<sup>A</sup>T<sub>E</sub>X will be used.

The `\anskey` command is available for all levels of the `enumext` environment and the `enumext*` environment, but is disabled for the `keyans`, `keyans*` and `keyanspic` environments.

### 6.2.1 Keys for `\anskey`

By default the *mandatory argument*  $\langle content \rangle$  passed to `\anskey` when “storing” in the *sequence*  $\{\langle store name \rangle\}$  has the form `\item  $\langle content \rangle$` , the following *keys* allow modifying the way in which it is “stored” in the *sequence*.

`break-col`  $\langle value forbidden \rangle$  default: *not used*

Stores  $\{\langle content \rangle\}$  in the *sequence*  $\{\langle store name \rangle\}$  of the form `\columnbreak \item  $\langle content \rangle$` .

`item-join` =  $\{\langle columns \rangle\}$  default: *not set*

Set the *number of columns* to be used for `\item( $\langle columns \rangle$ )` and stores  $\{\langle content \rangle\}$  in the *sequence*  $\{\langle store name \rangle\}$  of the form `\item( $\langle columns \rangle$ )  $\langle content \rangle$` .

`item-star`  $\langle value forbidden \rangle$  default: *not used*

Stores  $\{\langle content \rangle\}$  in the *sequence*  $\{\langle store name \rangle\}$  of the form `\item*  $\langle content \rangle$` .

`item-sym*` =  $\{\langle symbol \rangle\}$  default: *not set*

Sets the *symbol* for `\item*` when using the key `item-star` and stores  $\{\langle content \rangle\}$  in the *sequence*  $\{\langle store name \rangle\}$  of the form `\item*[ $\langle symbol \rangle$ ]  $\langle content \rangle$` . The *symbol* can be in text or math mode, for example `item-sym*={\ast}` stores `\item*[ $\ast$ ]  $\langle content \rangle$` .

`item-pos*` =  $\{\langle rigid length \rangle\}$  default: *not set*

Sets the *offset* for `\item*` when using the keys `item-star` and `item-sym*` and stores  $\{\langle content \rangle\}$  in the *sequence*  $\{\langle store name \rangle\}$  of the form `\item*[ $\langle symbol \rangle$ ][ $\langle offset \rangle$ ]  $\langle content \rangle$` .

#### Example

```
\begin{enumext}[save-ans=test,show-ans=true]
  \item* Text containing our instructions or questions. \anskey{\first answer}
  \item Text containing our instructions or questions.
    \begin{enumext}
      \item Question.\anskey{\second answer}
    \end{enumext}
  \item Text containing our instructions or questions. \anskey{\third answer}
  \item Text containing our instructions or questions. \anskey{\fourth answer}
\end{enumext}
```

- |                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                        |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>* 1. Text containing our instructions or questions.</p> <p>* <span style="border: 1px solid black; padding: 2px;">first answer</span></p> <p>2. Text containing our instructions or questions.</p> <p>* <span style="border: 1px solid black; padding: 2px;">fourth answer</span></p> |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

## 6.3 The environment `anskey*`

---

`anskey*` `\begin{anskey*}[(key = val)]  $\langle body content \rangle$  \end{anskey*}`

---

The environment `anskey*` takes a mandatory  $\{\langle body content \rangle\}$  and “stores it” in the *sequence* and *prop list*  $\{\langle store name \rangle\}$  set by `save-ans` key. If `save-ref` key are active and the `hyperref`[8] package is detected `\hyperlink` and `\hypertarget` will be used, otherwise the usual “label and ref” system provided by  $\LaTeX$  will be used.

By design the environment cannot be nested but full supports “verbatim material” in the  $\langle body \rangle$  and it is assumed that “each numbered” `\item` or `\item*` within the environment in which it is active it has a “single execution” unless `\item` or `\item*` open a nested level or use the `no-store` key.

The `anskey*` environment is implemented using the new “collect code” c-type argument part of  $\LaTeX$  release 2025-06-01[13]. `\begin{anskey*}` and `\end{anskey*}` must be in different lines and should not appear within verbatim environments or commands. All *keys* must be passed separated by commas and “without separation” of the start of the environment.

Comments ‘%’ or any character after `\begin{anskey*}` or `[(key = val)]` on the same line are NOT supported,  $\LaTeX$  will return an “error” message if this happens. In a similar way comments ‘%’ or any character after `\end{anskey*}` on the same line  $\LaTeX$  will return a “warning” message.

### 6.3.1 Keys for `anskey*`

The `anskey*` environment uses the same *keys* as the `\anskey` command next to the *keys* `write-env`, `overwrite` and `force-eol`. The environment is available for all levels of the `enumext` environment and the `enumext*` environment, but it is disabled for the `keyans`, `keyans*` and `keyanspic` environments.

`write-env` =  $\{\langle file.ext \rangle\}$  default: *not used*

Sets the *name* of the  $\langle external file \rangle$  in which the  $\langle contents \rangle$  of the environment will be written. The  $\langle file.ext \rangle$  will be created in the working directory, relative or absolute paths are not supported. If  $\langle file.ext \rangle$  does not exist, it will be created or overwritten if the `overwrite` key is used.

`overwrite = {\langle true | false \rangle}`

default: *false*

Sets whether the *\file.ext* generated by *write-env* from the *anskey\** environment will be rewritten.

`force-eol = {\langle true | false \rangle}`

default: *false*

Sets if the *last end of line* for the *\stored content* is hidden or not. This key is necessary only if the last line is the closing of some environment defined by the *fancyvrb* package as *\end{Verbatim}* or another environment that does not support a comments ‘%’ after closing *\end{Verbatim}*%.

### Example

```
\begin{enumext}[save-ans=test,show-pos=true,start=5]
  \item* Text containing our instructions or questions.
  \begin{anskey*}[item-star]
    \langle first answer \rangle
  \end{anskey*}

  \item Text containing our instructions or questions.
  \begin{enumext}
    \item Question.
    \begin{anskey*}
      \langle second answer \rangle
    \end{anskey*}
  \end{enumext}

  \item Text containing our instructions or questions.
  \begin{anskey*}
    \langle third answer \rangle
  \end{anskey*}

  \item Text containing our instructions or questions.
  \begin{anskey*}
    \langle fourth answer \rangle
  \end{anskey*}
\end{enumext}
```

★ 5. Text containing our instructions or questions.

[5] First answer with verbatim

6. Text containing our instructions or questions.

(a) Question.

[6] second answer

7. Text containing our instructions or questions.

[7] third answer

8. Text containing our instructions or questions.

[8] fourth answer

## 6.4 The environments *keyans* and *keyans\**

*keyans* `\begin{keyans}[\langle key = val \rangle] \item \item[\langle custom \rangle] \item* \item*[\langle content \rangle] \end{keyans}`

*keyans\** `\begin{keyans*}[\langle key = val \rangle] \item \item[\langle custom \rangle] \item* \item*[\langle content \rangle] \end{keyans*}`

The *keyans* and *keyans\** environments are “*enumerated list*” environments designed for “*multiple choice*” questions activated by the *save-ans* key.

This environments can NOT be nested and must always be at the “*first level*” of the *enumext* environment, the commands *\item* and *\item[\langle custom \rangle]* work in the usual and the command *\item(\langle columns \rangle)* is available for the *keyans\** environment.

- The behavior of *\item\** in *keyans* and *keyans\** environments is NOT the same as in the *enumext* or *enumext\** environments.

```
\begin{enumext}[save-ans=test]
  \item \langle item content \rangle
  \begin{keyans}[\langle key = val \rangle]
    \item \langle item content \rangle
    \item [\langle custom \rangle] \langle item content \rangle
    \item* \langle item content \rangle
    \item*[\langle content \rangle] \langle item content \rangle
  \end{keyans}
\end{enumext}
```

```
\begin{enumext}[save-ans=test]
  \item \langle item content \rangle
  \begin{keyans*}[\langle key = val \rangle]
    \item \langle item content \rangle
    \item [\langle custom \rangle] \langle item content \rangle
    \item* \langle item content \rangle
    \item*[\langle content \rangle] \langle item content \rangle
  \end{keyans*}
\end{enumext}
```

The *\langle keys \rangle* set in the *optional argument* of the environment are the same (almost) as those of the *enumext* and *enumext\** environments and have *higher precedence* than those set by *\setenumext[\langle keyans \rangle]{\langle key = val \rangle}* or *\setenumext[\langle keyans\* \rangle]{\langle key = val \rangle}*. If the *optional argument* is not passed or the *\langle keys \rangle* are not set by *\setenumext*, the default values will be the same as the “*second level*” of the *enumext* environment with the difference in the *\langle label \rangle* which will be set to *label=\Alph\**.

The keys *mark-ans\**, *mark-pos\**, *mark-sep\**, *save-sep*, *wrap-opt*, *wrap-ans\**, *show-ans* and *show-pos* are available for both environments.

6.4.1 The \item\* in keyans and keyans\*

`\item*` `\item*`  
`\item*[\langle content \rangle]`

The `\item*` and `\item*[\langle content \rangle]` command “store” the current `\label` set by `label` key next to the *optional argument* `\langle content \rangle` in *sequence* and *prop list* `\{ \langle store name \rangle \}` set by `save-ans` key in the “first level” of the `enumext` or `enumext*` environments.

The *starred argument* ‘\*’ cannot be separated by spaces ‘ ’ from the command, i.e. `\item*` and the *optional argument* does “NOT” support *verbatim content*. By design it is assumed that the `\item*` will only appear “once” within the environment.

Example

```
\begin{enumext}[save-ans=test,columns=2,show-ans=true]
  \item Text containing a question.

  \begin{keyans*}[nosep,columns=2]
    \item Choice
    \item* Correct choice
    \item Choice
    \item Choice
    \item Choice
  \end{keyans*}

  \item Text containing a question and image.

  \begin{keyans}[nosep,mini-env={0.4\linewidth}]
    \item Choice
    \item Choice
    \item Choice
    \item Choice
    \item*[\note] Correct choice
    \miniright

6.5 The environment keyanspic

`keyanspic` `\begin{keyanspic}[\langle key = val \rangle] \anspic*[\langle content \rangle]{\langle drawing or tabular \rangle} \end{keyanspic}`

The `keyanspic` environment is an “enumerated list” environment activated by the `save-ans` key that has the same configuration for “spacing” and `\label` as the `keyans` environment that uses the `\anspic` command instead of `\item`. It is intended for placing *drawings or tabular* with `\label` centered *above* or *below* in a *single line* or *upper and lower* layout style.

When the `keyanspic` environment is used *without keys* the `\label`s are centered *below* the *drawings or tabular* in a *single line* layout style.

A representation of the output can be seen in the figure 6.

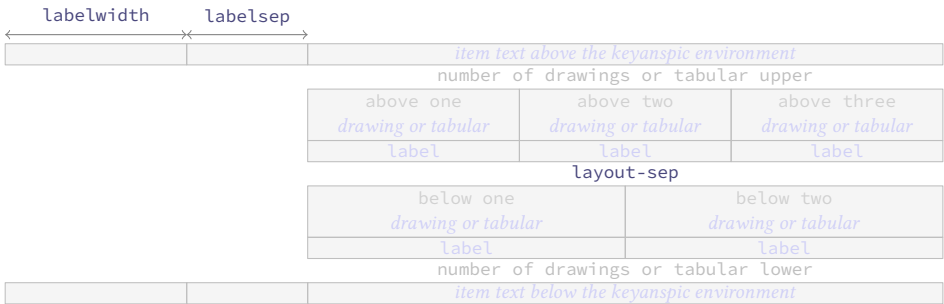

Figure 6: Representation of the `keyanspic` environment with `layout-sty={\langle 3, 2 \rangle}` in `enumext`.

This environment cannot be nested and must *always* be at the “first level” of the `enumext` environment, the `\item` command is disabled and `\keys` cannot be set using `\setenumext`.

### 6.5.1 Keys for keyanspic

`label-pos = {⟨above | below⟩}`

default: *below*

Set the *position* of ⟨*label*⟩ to be centered “above” or “below” *drawings* or *tabular* when the `\anspic` command is executed.

`label-sep = {⟨rubber length | rigid length⟩}`

default: *internal adjustment*

Set the *vertical spacing* between the ⟨*label*⟩ centered “above” or “below” and *drawings* or *tabular* when running the `\anspic` command.

`layout-sty = {⟨n° upper , n° lower⟩}`

default: *not set*

Set the *number of drawings* or *tabular* that will be distributed “upper” and “lower” within the environment when executing the `\anspic` command. The value must be passed in braces and if not set or the ⟨*n° lower*⟩ is omitted the *drawings* or *tabular* will be put on a *single line*.

`layout-sep = {⟨rubber length | rigid length⟩}`

default: *adjusted parsep from keyans*

Set the *vertical separation* between the number of *drawings* or *tabular* placed at the “upper” and “lower” within the environment when executing the `\anspic` command. Internally adjusts the `parsep` value taken from the `keyans` environment.

`layout-top = {⟨rubber length | rigid length⟩}`

default: *adjusted topsep from keyans*

Set the *vertical space* added to both the top and bottom of the environment. Internally adjust the value of `topsep` taken from `keyans` environment.

The keys `mark-ans*`, `mark-pos*`, `mark-sep*`, `save-sep`, `wrap-opt`, `wrap-ans*`, `show-ans` and `show-pos` are available for this environment.

### 6.5.2 The command `\anspic`

---

`\anspic` `\anspic{⟨drawing or tabular⟩}`  
`\anspic*` `\anspic*[⟨content⟩]{⟨drawing or tabular⟩}`

---

The `\anspic` command take three arguments, the *starred argument* ‘`*`’ store the current ⟨*label*⟩ next to the *optional argument* ⟨*content*⟩ in *sequence* and *prop list* {⟨*store name*⟩} set by `save-ans` key.

The *starred argument* ‘`*`’ cannot be separated by spaces ‘`␣`’ from the command, i.e. `\anspic*` and the *optional argument* does “NOT” support *verbatim content*. By design it is assumed that the *starred argument* ‘`*`’ will only appear “once” within the environment.

#### Example

```
\begin{enumext}[save-ans=test,show-ans=true,nosep]
  \item Question with images and labels below.

  \begin{keyanspic}[layout-sty={3,2}]
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic{\includegraphics[scale=0.15]{example-image-b}}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
  \end{keyanspic}

  \item Question with images and labels above.

  \begin{keyanspic}[label-pos=above, layout-sty={3,2},layout-sep=0.25cm]
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic{\includegraphics[scale=0.15]{example-image-b}}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
  \end{keyanspic}

  \item Question with images and labels below on a single line.

  \begin{keyanspic}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic{\includegraphics[scale=0.15]{example-image-b}}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic{\includegraphics[scale=0.15]{example-image-a}}
    \anspic*[note]{\includegraphics[scale=0.15]{example-image-a}}
  \end{keyanspic}

\end{enumext}
```

1. Question with images and labels below.

A)

B)

C)

D)

\* E) [note]

2. Question with images and labels above.

3. Question with images and labels below on a single line.

A)

B)

C)

D)

\* E) [note]

Remember to pass the `alt={description}` key to the `\includegraphics` command when creating a *tagged* PDF.

6.6 Printing stored content

6.6.1 The command `\getkeyans`

`\getkeyans` `\getkeyans{<store name> : <position>}`

The command `\getkeyans` prints the “stored content” in *prop list* `{<store name>}` defined by `save-ans` key in the `<position>` returned by the `show-pos` key.

The “stored content” can only be accessed *after* it is stored, if `{<store name>}` does not exist the command will return an error.

The form taken by the argument `{<store name> : <position>}` is the same as that used to generate the “internal label and ref” system when `save-ref` key are active, so to refer to a “stored content”. For example `\getkeyans{test:4}` will return the “stored content” at position `4` of the environment in which the key `save-ans=test` was set.

6.6.2 The command `\foreachkeyans`

`\foreachkeyans` `\foreachkeyans[<key = val>]{<store name>}`

The command `\foreachkeyans` goes through and executes the command `\getkeyans` on the contents in *prop list* `{<store name>}`. If you pass without options run `\getkeyans` on all contents in *prop list* `{<store name>}`.

Options for command

`sep = {<code>}` default: `{;}`

Establishes the *separation* between “each” `{<content>}` stored in *prop list* `{<store name>}`. For example, you can use `sep={\[\[10pt]}` for vertical separation of stored contents.

`step = {<integer>}` default: `1`

Sets the *step* (increment) applied to the value set by key `start` for “each” `{<content>}` stored in *prop list* `{<store name>}`. The value must be a *positive integer*.

`start = {<integer>}` default: `1`

Sets the *position* of the *prop list* `{<store name>}` from which execution will start. The value must be a *positive integer*.

`stop = {<integer>}` default: `0`

Sets the *position* of the *prop list* `{<store name>}` from which execution will finish. The value must be a *positive integer*.

`before = {⟨code⟩}` default: *empty*  
 Sets the {⟨code⟩} that will be executed ⟨before⟩ each {⟨content⟩} stored in *prop list* {⟨store name⟩}. The {⟨code⟩} must be passed between braces.

`after = {⟨code⟩}` default: *empty*  
 Sets the {⟨code⟩} that will be executed ⟨after⟩ each {⟨content⟩} stored in *prop list* {⟨store name⟩}. The {⟨code⟩} must be passed between braces.

`wrapper = {⟨code #1⟩ more code}` default: *empty*  
 Wraps the {⟨content⟩} stored in *prop list* {⟨store name⟩} referenced by {#1}. The {⟨code⟩} must be passed between braces. For example `\foreachkeyans[wrapper={\makebox[1em][l]{#1}}]{⟨store name⟩}`.

### 6.6.3 The command `\printkeyans`

---

```
\printkeyans {⟨store name⟩}
\printkeyans [⟨keys⟩]{⟨store name⟩}
\printkeyans * [⟨keys⟩]{⟨store name⟩}
```

---

The command `\printkeyans` prints “all stored content” in *sequence* {⟨store name⟩} defined by `save-ans` key placing this inside the `enumext` or `enumext*` environment if the *starred argument* ‘\*’ is used.

The “stored content” can only be accessed *after* it is stored in the *sequence*, if {⟨store name⟩} does not exist the command will return an error.

The *optional argument* allows managing the ⟨keys⟩ in the “first level” of the environment in which the “stored content” of the *sequence* {⟨store name⟩} will be printed, if the *starred argument* ‘\*’ is used it will be `enumext*` otherwise `enumext`.

The default values for the “first level” are the same as the default values for the `enumext` and `enumext*` environments along with the keys `nosep`, `first=\small`, `font=\small` and `columns=2`. For the inner levels of the environment `enumext` saved in the *sequence* {⟨store name⟩} the default values are the same as those established for the second, third and fourth levels plus the keys `nosep`, `first=\small`, `font=\small`. If the environment `enumext*` is saved within the *sequence* {⟨store name⟩} it will have the same default values plus the keys `nosep`, `first=\small`, `font=\small`.

Since the command encapsulates by default the `enumext` environment or the `enumext*` environment, we must take some considerations:

- If we execute `\printkeyans*{⟨store name⟩}` and the *sequence* {⟨store name⟩} already contains any `enumext*` environment an error will be returned as we cannot nest.
- If we execute `\printkeyans*{⟨store name⟩}` and the *sequence* {⟨store name⟩} contains any `enumext` environments, they will start with the ⟨keys⟩ set for the first level unless they are set in the *optional argument* or `save-key` is used to modify it.
- If we execute `\printkeyans{⟨store name⟩}` and the *sequence* {⟨store name⟩} contains any environment `enumext*`, they will start with the ⟨keys⟩ set by default unless they are set in the *optional argument* or `save-key` is used to modify it.

The default values for the “first level” of `\printkeyans` commands and `\printkeyans*` are established using `\setenumext[⟨print , 1⟩]{⟨keys⟩}` and `\setenumext[⟨print*⟩]{⟨keys⟩}`.

If we need to set the ⟨keys⟩ for the environment `enumext` “saved” in the *sequence* {⟨store name⟩} we will use `\setenumext[⟨print , level⟩]{⟨keys⟩}` and if we need to set the ⟨keys⟩ for the environment `enumext*` “saved” in the *sequence* {⟨store name⟩} we will use `\setenumext[⟨print , *⟩]{⟨keys⟩}`.

#### Example

```
\begin{enumext}[save-ans=sample,columns=1,show-pos=true,nosep,save-ref=true]
  \item Factor $3x+3y+3z$. \anskey{$3(x+y+z)$}
  \item True False

  \begin{enumext}[nosep]
    \item \LaTeX2e\ is cool? \anskey{Very True!}
  \end{enumext}

  \item Related to Linux

  \begin{enumext}[nosep]
    \item You use Linux? \anskey{Yes}
    \item Rate the following package and class
      \begin{enumext}[nosep]
        \item \texttt{xsim} \anskey{very good}
        \item \texttt{exsheets} \anskey{obsolete}
      \end{enumext}
    \end{enumext}
\end{enumext}
```

The answer to \ref{sample:4} is \getkeyans{sample:4} and the answers to all the worksheets are as follows:

\printkeyans{sample}

1. Factor  $3x + 3y + 3z$ .

[1]

2. True False

(a) ~~TeX~~ze is cool?

[2]

3. Related to Linux

(a) You use Linux?

[3]

(b) Rate the following package and class

i. `xsim`

[4]

ii. `exsheets`

[5]

The answer to 3.(b).i is very good and the answers to all the worksheets are as follows:

1.  $3(x + y + z)$

2. (a) Very True!

3. (a) Yes

(b) i. very good

ii. obsolete

7 Full examples

Here I will leave as an example some adaptations questions taken from TeX-SX. The examples are attached to this documentation and can be extracted from your PDF viewer or from the command line by running:

```
$ pdfdetach -saveall enumext.pdf
```

and then you can use the excellent arara<sup>1</sup> tool to compile them.

Example 1

Adapted from the response given by Enrico Gregorio in Squares for answer choice options and perfect alignment to mathematical answers.

1. La velocità di  $1,00 \times 10^2$  m/s espressa in km/h è:

A

36 km/h.

B

360 km/h.

C

27,8 km/h.

D

 $3,60 \times 10^8$  km/h.

3. La velocità di  $1,00 \times 10^2$  m/s espressa in km/h è:

A

36 km/h.

B

360 km/h.

C

27,8 km/h.

D

 $3,60 \times 10^8$  km/h.

2. In fisica nucleare si usa l'angstrom (simbolo:  $1 \text{ \AA} = 1 \times 10^{-10}$  m) e il fermi o femtometro ( $1 \text{ fm} = 1 \times 10^{-15}$  m). Qual è la relazione tra queste due unità di misura?

A

 $1 \text{ \AA} = 1 \times 10^5 \text{ fm}.$

B

 $1 \text{ \AA} = 1 \times 10^{-5} \text{ fm}.$

C

 $1 \text{ \AA} = 1 \times 10^{-15} \text{ fm}.$

D

 $1 \text{ \AA} = 1 \times 10^3 \text{ fm}.$

4. In fisica nucleare si usa l'angstrom (simbolo:  $1 \text{ \AA} = 1 \times 10^{-10}$  m) e il fermi o femtometro ( $1 \text{ fm} = 1 \times 10^{-15}$  m). Qual è la relazione tra queste due unità di misura?

A

 $1 \text{ \AA} = 1 \times 10^5 \text{ fm}.$

B

 $1 \text{ \AA} = 1 \times 10^{-5} \text{ fm}.$

C

 $1 \text{ \AA} = 1 \times 10^{-15} \text{ fm}.$

D

 $1 \text{ \AA} = 1 \times 10^3 \text{ fm}.$

1. B

2. A

3. B

4. A

Example 2

Adapted from the response given by Florent Rougon in Multiple choice questions with proposed answers in random order — addition of automatic correction (cross mark).

8 Tagged PDF examples

This section is just to show the compatibility of `enumext` with *tagged* PDF using `lualatex`. The attached files here are just for testing and are intended as examples and, in a way, to simplify the time of Matthew Bertucci (@mbertucci) when he sees this excellent package and adds it to [The LaTeX Tagged PDF repository](#).

To compile the tests with `lualatex-dev` the packages `multicol`, `unicode-math`, `geometry`, `graphicx`, `luamml` and `hyperref` are required along with the line:

```
\DocumentMetadata{lang = en-US, pdfversion = 2.0, pdfstandard = ua-2, tagging=on,}
```

- All examples have been checked using `veraPDF` together with `ngpdf`.
  - The file `enumext-01.tex` contains the basic tests for the `enumext` and `enumext*` environments and the nesting between them plus the use of the `label`, `labelwidth`, `labelsep`, `ref`, `align` and `wrap-label` keys.
  - The file `enumext-02.tex` contains the tests for the `enumext` and `enumext*` environments and the support for `minipage` and `multicols` environments using the keys `columns`, `columns-sep`, `mini-env`, `mini-right` and `\miniright` command.
  - The file `enumext-03.tex` contains the tests for the `enumext` and `keyanspic` environments activated by the `save-ans` key together with the `save-sep` and `save-ref` keys and the `\printkeyans` command.
  - The file `enumext-04.tex` contains the tests for the `\anskey` command and the `anskey*` environment activated by the `save-ans` key along with the `\getkeyans` and `\printkeyans` commands.
  - The file `enumext-05.tex` contains the tests for the environments `keyans`, `keyans*` and `keyanspic` activated by the key `save-ans` together with the keys `no-store` and `show-ans` and the commands `\setenumext`, `\setenumextmeta`, `\printkeyans` and `\foreachkeyans`.
  - The file `enumext-06.tex` contains the tests for the environments `enumext` and `enumext*` for *fake itemize* and *description*.
  - The file `enumext-07.tex` contains the tests for starting the environments with `\setenumext{resume}`, the `\resetenumext` command and the `series`, `resume`, `resume*` and `reset` keys.

9 The way of non-enumerated lists

It is possible to use (or abuse) the `enumext` and `enumext*` environments to mimic *non-enumerated* list environments such as *itemize* and *description*, clearly the *⟨keys⟩* to “store answers”, the `keyans`, `keyans*` and `keyanspic` environments lose their sense and it is not the focus of `enumext` package, but, why not to do it?.

Here I leave as an example other uses of the `enumext` environment that can be helpful for specific purposes. The *trick* to generate these “fake environments” is set `label={}` or `label={⟨some⟩}` and play with the `list-indent`, `list-offset`, `font` and `wrap-label` keys.

Fake itemize environment

Here we set the `label` key using the default settings in  $\text{\TeX}$  for the four levels `\textbullet`, `\textendash`, `\textasteriskcentered` and `\textperiodcentered` together with the `nosep` key to reduce the vertical spaces in the left side example and set the `label` key in *mathematical mode* for the right side as `\ast`, `\diamond`, `\circ` and `\star` for the four levels together with the `nosep` key

- First level item
    - Second level item
      - \* Third level item
        - Fourth level item
  - First level item
- \* First level item
    - ◊ Second level item
      - Third level item
        - ★ Fourth level item
  - \* First level item

Fake description environment

Here we set `label={}` and `list-indent=2.5em`, `font=\bfseries`.

- SomeThing** A short one-line description.

This is an entry *without* a label.

**Something** A short *one-line* description text.

**Something long** A much *longer* description text may take more than one line or more than one paragraph.

    Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

If we add `list-indent=0pt` you get *widest style*:

- SomeThing** A short one-line description.

This is an entry *without* a label.

**Something** A short *one-line* description text.

**Something long** A much *longer* description text may take more than one line or more than one paragraph. Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

- The small space at the beginning of the “*unlabeled entry*” corresponds to `\labelsep` and can be removed using `\hspace{-\labelsep}` at the beginning of the line.
- When *tagged* PDF is active the default `description` style is NOT available due to the redefinition of `\makelabel` for the `align` key which uses `\makebox` in this case, meaning that `\item[⟨content⟩]` will not extend beyond `\labelwidth` which causes overlaps,

Description indented by label

Here we set `label={}` and we will give a convenient value to `labelsep` and `labelwidth`, for example we can take as reference our *longest label* and pass it as value using:

```
\newlength{\descitemwd}
\settowidth{\descitemwd}{\textbf{Something long}}
and then use labelsep=4pt,labelwidth=\descitemwd,font=\bfseries.
```

**SomeThing** A short one-line description.  
This is an entry *without* a label.  
**Something** A short one-line description.  
**Something long** A much longer description. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

The environment can be translated so that the `⟨labels⟩` are on the left margin calculating the value passed to the `list-offset` key, in this case it will be equal to the sum of the values set by the `labelwidth` and `labelsep` keys finally resulting as `list-offset={-\descitemwd - 4pt}`.

**SomeThing** A short one-line description.  
This is an entry *without* a label.  
**Something** A short one-line description.  
**Something long** A much longer description. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

If we add `align=right` it will look like this:

**SomeThing** A short one-line description.  
This is an entry *without* a label.  
**Something** A short one-line description.  
**Something long** A much longer description. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

- At this point we have used `list-offset={-\descitemwd - 4pt}` instead of `list-offset={-\labelwidth - \labelsep}`, this is because the parameters `\labelwidth` and `\labelsep` take the default values, as if we had not set `label`.

Description with multi-line labels

The `label` key does not accept *multiline material*, this is where the `wrap-label` and `wrap-label*` keys comes into play. Unlike the `enumitem` package, the `align` key only supports three options, so what we will do is create a command in the style `\parleft` of `enumitem` that allows us to place *multiline labels* using `\parbox`.

```
\NewDocumentCommand \labelbx { s +m }
{%
  \SuspendTagging{\parbox}%
  \IfBooleanTF{#1}
  {\\strut\smash{\parbox[t]{\labelwidth}{\raggedright{#2}}}}%
  {\\strut\smash{\parbox[t]{\labelwidth}{\raggedleft{#2}}}}%
  \ResumeTagging{\parbox}%
}
```

Now we just need to set `wrap-label*={\labelbx{#1}}`.

**SomeThing** A short one-line description.  
This is an entry *without* a label.  
**Something** A short one-line description.  
**Something long** A much longer description. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.  
Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.  
**SoMeThInG LoNg** A much longer description. Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris.

## Final notes

The original implementation (if you can call it that) of the ideas that led to the creation of `enumext` were some macros using the `enumerate`[5] package for personal use created in early 2003, the code was quite questionable, but functional for these simple requirements.

With the great answers given by Christian Hupfer in [Create a fake label ref using list](#) and the answer given by David Carlisle in [Change the use of label ref by data save in an array \(list\)](#) I managed to create a more solid code than the original version, now using the `l3prop`[11] and `l3seq`[11] modules together with the `hyperref`[8] and `enumitem`[6] packages, which did the job, but with some limitations.

As time went by I took these limitations as a personal challenge which I called “*reinventing the wheel*”, since there were packages and classes that did more or less what I was looking for, but did not fit my simple requirements. This “*reinventing the wheel*” finally ended up becoming `enumext`.

### Why list environments?

The answer is simple, first I love the beauty of its syntax and many of what I had already written used the `enumerate` environment or lists created using the `enumitem` package. In my mind I thought: how complicated could it be to write a package that looked like `enumitem`? It seemed simple enough, of course I didn’t have in mind the mess I was getting into working with `list` environments, `minipage` and adding support for the `multicol` and `hyperref` packages.

Of course, seeing the final result of the experiment “*reinventing the wheel*” I am quite satisfied.

### Why not random questions and other utilities

The “*random*” type questions I love and hate them at the same time, although they simplify a lot the work when creating a multiple choice test, but you lose the beauty of typesetting a document with  $\text{\LaTeX}$ , that is to say the output does not always look as nice as it should, even if they are only alternatives these must follow a certain order when presented either numerical or presentation, that said handling that using *nested lists* is quite complicated so I do not classify to be implemented.

### Why has it taken so long?

One of the setbacks, beyond my laziness, was including compatibility with *tagged* PDF. To be honest, it’s something I never considered at any point, but I firmly believe that being able to create *accessible documents* provides a great opportunity in the world of mathematics education. From my perspective as a *high school* teacher, beyond theorems and deep mathematics, the use of exercise lists is one of the most common things. Being able to open the way to work in parallel with those who have different abilities is really important and I regret not having looked into this in the past. I hope that `enumext` serves this purpose and inspires more users and authors to follow this path.

## 11 Change history

- v2.2 (ctan), 2026-06-01**
  - Update requirement to L<sup>A</sup>T<sub>E</sub>X release 2026-06-01.
  - Move `\setcounter` to `\begin{list}{⟨arg one⟩}{⟨arg two⟩\setcounter}` for `enumext*`.
  - Adjustments in the documentation.
- v2.1 (ctan), 2026-01-15**
  - Fixed bad interaction between `\setenumext` and the `ref` key.
- v2.0 (ctan), 2025-12-02**
  - Update requirement to `multicol` release 2025-10-21.
  - Adjustments in the documentation.
- v1.9 (ctan), 2025-11-01**
  - Update requirement to L<sup>A</sup>T<sub>E</sub>X release 2025-11-01.
  - Move `\setcounter` to `\begin{list}{⟨arg one⟩}{⟨arg two⟩\setcounter}`.
  - Update code for *tagged* PDF.
- v1.8 (ctan), 2025-10-04**
  - Replacing `\scantokens` (primitive) with `\tl_retokenize:n`.
  - Cleanup warnings and details returned by `expltools`.
- v1.7 (ctan), 2025-07-10**
  - Fixed `\setenumext{enumext*}{resume}`.
  - Fixed bad interaction between `\setenumext` and the `resume` key.
  - The behavior of the key `resume*` has been updated and documented.
- v1.6 (ctan), 2025-07-04**
  - Syntax simplification for `\setenumextmeta`.
  - Environments can be started with the key `resume without value`.
  - Add `\resetenumext`, `reset` and `reset*` keys.
  - The `resume`, `resume*` and `series` keys can now be set per level.
  - Fixed bad interaction between `\printkeyans` and the `resume`, `resume*` keys.
- v1.5 (ctan), 2025-06-11**
  - Replacing `\regex_match:` (deprecated) with `\regex_if_match:`.
  - Add keys `beginpenalty`, `midpenalty` and `endpenalty`.
- v1.4 (ctan), 2025-06-09**
  - Improved implementation of the `start` key for *tagged* PDF.
  - Improved implementation of the `ref` key.
  - Fixed the behavior of the `save-sep` key.
  - Fixed the behavior of the `resume*` key.
- v1.3 (ctan), 2025-06-01**
  - Removed dependency on the `scontents` package.
  - The `anskey*` environment has been rewritten using the new `c`-type argument.
- v1.2 (ctan), 2025-03-28**
  - Replace signature (prevent expansion for optional argument).
  - Solve Inconsistent local/global assignment.
- v1.1 (ctan), 2024-11-14**
  - Fixed implementation for `font` and `base-fix` keys.
  - Added new keys for symbol marks.
  - Update and improvements in the internal code.
  - Adjustments in the documentation.
- v1.0 (ctan), 2024-11-01**
  - First public release.

## 13 Implementation

The most recent publicly released version of `enumext` is available at CTAN: <https://www.ctan.org/pkg/enumext>. While general feedback via email is welcomed, specific bugs or feature requests should be reported through the issue tracker: <https://github.com/pablgonz/enumext/issues>.

- The documentation presented here is far from professional, it contains a lot of obvious information that to the eye of a TeXpert are superfluous, but, after so many years developing this project is the only way to remember what does what.

### 13.1 General conventions

Variables containing `i`, `ii`, `iii` and `iv` are associated by level with the `enumext` environment, variables containing `v` are associated with the `keyans` environment, variables containing `vi` are associated with the `keyanspic` environment, variables containing `vii` are associated with the `enumext*` environment and variables containing `viii` are associated with the `keyans*` environment.

To simplify writing and documentation some variables and functions that are common to the different levels of the environments are described using a capital “X”.

The temporary function `\__enumext_tmp:n` is used in different parts of the package code for variable creation or execution of other functions that are grouped into this one.

All variables and functions defined in this package are private and are NOT intended to work or be used by another package or module.

### 13.2 Initial set up

Start the DocStrip guards.

```
1 <{*package>
```

Identify the internal prefix (L<sup>A</sup>T<sub>E</sub>X3 DocStrip convention) for l3doc class.

```
2 <@@=enumext>
```

### 13.3 Declaration of the package

First we will make sure we have a minimum (super updated) version of L<sup>A</sup>T<sub>E</sub>X to work correctly.

```
3 \NeedsTeXFormat{LaTeX2e}[2026-06-01]
```

Now declare the `enumext` package.

```
4 \ProvidesExplPackage {enumext} {2026-06-01} {2.2} {Enumerate exercise sheets}
```

Finally check if the `multicol` package are loaded, if not we load it.

```
5 \hook_gput_code:nnn {begindocument} {enumext}
6 {
7   \IfPackageLoadedTF { multicol }
8   {
9     \msg_info:nnn { enumext } { package-load } { multicol }
10  }
11  {
12    \msg_info:nnn { enumext } { package-not-load } { multicol }
13    \RequirePackage{multicol}[2025-10-21]
14  }
15 }
```

### 13.4 Definition of variables

Variables that do not appear in this section are created by means of `\keys_define:nn` or some function described below.

Integer variables will control the nesting levels of the environments, `anskey*` environment and `\anskey` command.

```
\__enumext_level_int
\__enumext_level_h_int
\__enumext_anskey_level_int
\__enumext_keyans_level_int
\__enumext_keyans_level_h_int
\__enumext_keyans_pic_level_int

16 \int_new:N \__enumext_level_int
17 \int_new:N \__enumext_level_h_int
18 \int_new:N \__enumext_anskey_level_int
19 \int_new:N \__enumext_keyans_level_int
20 \int_new:N \__enumext_keyans_level_h_int
21 \int_new:N \__enumext_keyans_pic_level_int
```

(End of definition for `\__enumext_level_int` and others.)

```

\l__enumext_starred_bool
\g__enumext_starred_bool
  \l__enumext_starred_first_bool
\l__enumext_standar_bool
\g__enumext_standar_bool
  \l__enumext_standar_first_bool
\l__enumext_keyans_env_bool
\g__enumext_start_line_tl
\g__enumext_envir_name_tl
\l__enumext_envir_name_tl

```

Internal variables used by functions `\__enumext_is_not_nested:`, `\__enumext_is_on_first_level:` and `\__enumext_keyans_name_and_start:` (§13.5.1).

```

22 \bool_new:N \l__enumext_starred_bool
23 \bool_new:N \g__enumext_starred_bool
24 \bool_new:N \l__enumext_starred_first_bool
25 \bool_new:N \l__enumext_standar_bool
26 \bool_new:N \g__enumext_standar_bool
27 \bool_new:N \l__enumext_standar_first_bool
28 \bool_new:N \l__enumext_keyans_env_bool
29 \tl_new:N \g__enumext_start_line_tl
30 \tl_new:N \g__enumext_envir_name_tl
31 \tl_new:N \l__enumext_envir_name_tl

```

(End of definition for `\l__enumext_starred_bool` and others.)

```

\l__enumext_counter_i_tl
\l__enumext_counter_ii_tl
\l__enumext_counter_iii_tl
\l__enumext_counter_iv_tl
\l__enumext_counter_v_tl
\l__enumext_counter_vi_tl
\l__enumext_counter_vii_tl
\l__enumext_counter_viii_tl

```

Variables to store the “*name of the counters*” `enumXi`, `enumXii`, `enumXiii` and `enumXiv` for `enumext` environment, `enumXv` for `keyans` environment and `enumXvi` for the `keyanspic` environment. The counters `enumXvii` and `enumXviii` are used by `enumext*` and `keyans*` environments.

The initial values of these variables are set by the function `\__enumext_define_counter:Nn` (§13.11) and then modified by the function `\__enumext_label_style:Nnn` used by `label` key (§13.14).

```

32 \cs_set_protected:Npn \__enumext_tmp:n #1
33 {
34   \tl_new:c { \l__enumext_counter_#1_tl }
35 }
36 \clist_map_inline:nn { i, ii, iii, iv, v, vi, vii, viii } { \__enumext_tmp:n {#1} }

```

(End of definition for `\l__enumext_counter_i_tl` and others.)

```

\l__enumext_ref_key_arg_tl
\l__enumext_ref_the_count_tl
  \l__enumext_renew_counter_X_tl
\l__enumext_the_counter_X_tl

```

Internal variables used by `ref` key (§13.14).

```

37 \tl_new:N \l__enumext_ref_key_arg_tl
38 \tl_new:N \l__enumext_ref_the_count_tl
39 \cs_set_protected:Npn \__enumext_tmp:n #1
40 {
41   \tl_new:c { \l__enumext_renew_counter_#1_tl }
42   \tl_new:c { \l__enumext_the_counter_#1_tl }
43   \tl_set:ce { \l__enumext_the_counter_#1_tl } { \exp_not:c { theenumX#1 } }
44 }

206 }

```

(End of definition for `\__enumext_at_begin_document:n`.)

```

\__enumext_after_env:nn
\__enumext_before_env:nn

```

A internal “hook” functions for execute code `mini-right` and `mini-right*` keys outside the `enumext*` and `keyans*` environments and print check-ans outside the `enumext` and `enumext*` environments.

```

207 \cs_new_protected:Npn \__enumext_after_env:nn #1 #2
208 {
209   \hook_gput_code:nnn {env/#1/after} {enumext} {#2}
210 }
211 \cs_new_protected:Npn \__enumext_before_env:nn #1 #2
212 {
213   \hook_gput_code:nnn {env/#1/before} {enumext} {#2}
214 }

```

(End of definition for `\__enumext_after_env:nn` and `\__enumext_before_env:nn`.)

```
\__enumext_level:
```

Function for check current level in `enumext`.

```

215 \cs_new:Nn \__enumext_level:
216 {
217   \int_to_roman:n { \l__enumext_level_int }
218 }

```

(End of definition for `\__enumext_level:`.)

`\__enumext_if_is_int:nT` A conditional function to determine whether the variable we are passing is an integer used by `start` and `widest` keys. This function is taken directly from the answer given by Henri Menke in [How to test if an expl3 function argument is an integer expression?](#).

```

219 \prg_new_protected_conditional:Npnn \__enumext_if_is_int:n #1 { T, F, TF }
220 {
221   \regex_if_match:nnTF { ^[\+|-]?[\d]+$ } {#1} % $
222   { \prg_return_true: }
223   { \prg_return_false: }
224 }

```

(End of definition for `\__enumext_if_is_int:nT`, `\__enumext_if_is_int:nF`, and `\__enumext_if_is_int:nTF`.)

`\__enumext_show_length:nnn` Internal function used by `show-length` key to show “all lengths” calculated and used in `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```

225 \cs_new:Npn \__enumext_show_length:nnn #1 #2 #3
226 {
227   *~#2
228   \prg_replicate:nn { 14 - \str_count:n {#2} } {~}
229   =~\use:c { #1_use:c } { \__enumext_#2_#3_#1 } \\
230 }

```

(End of definition for `\__enumext_show_length:nnn`.)

`\__enumext_unskip_unkern:` The function `\__enumext_unskip_unkern:` will remove the last `⟨skip⟩` or `⟨kern⟩` at execution time using the values `11` and `12` of `\lastnodetype` to apply `\unskip` or `\unkern` depending on the case.

```

231 \cs_new_protected:Nn \__enumext_unskip_unkern:
232 {
233   \int_case:nnT { \lastnodetype }
234   {
235     { 11 } { \unskip }
236     { 12 } { \unkern }
237   }
238 }

```

(End of definition for `\__enumext_unskip_unkern:`.)

### 13.5.1 Utilities for environments and levels

`\__enumext_is_not_nested:` The function `\__enumext_is_not_nested:` sets the variables `\g__enumext_standar_bool` and `\g__enumext_starred_bool` to “true” only if the environments `enumext` and `enumext*` are NOT nested in each other and saves the environment name in `\l__enumext_envir_name_tl`.

```

239 \cs_new_protected:Nn \__enumext_is_not_nested:
240 {
241   \str_case:en { \@currenvir }
242   {
243     {enumext}
244     {
245       \tl_set:Nn \l__enumext_envir_name_tl { enumext }
246       \bool_lazy_and:nnT
247       { \bool_not_p:n { \g__enumext_standar_bool } }
248       { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
249       {
250         \bool_gset_true:N \g__enumext_standar_bool
251       }
252     }
253     {enumext*}
254     {
255       \tl_set:Nn \l__enumext_envir_name_tl { enumext* }
256       \bool_lazy_and:nnT
257       { \bool_not_p:n { \g__enumext_starred_bool } }
258       { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
259       {
260         \bool_gset_true:N \g__enumext_starred_bool
261       }
262     }
263   }
264 }

```

The function `\__enumext_is_on_first_level:` will sets the variables `\l__enumext_standar_first_bool` (§13.29.1), `\l__enumext_starred_first_bool` (§13.29.1) to “true” only if the environment is not nested and we are in the “first level” of it . We will also save the *start line number* of each environment in the variable `\g__enumext_start_line_tl` and the *name* of each environment in the variable `\g__enumext_envir_name_tl` to use in messages related to the `check-ans` key and `.log` file.

```

265 \cs_new_protected:Nn \__enumext_is_on_first_level:
266 {
267   \bool_lazy_all:nT
268   {
269     { \bool_if_p:N \g__enumext_standar_bool }
270     { \int_compare_p:nNn { \l__enumext_level_int } = { 1 } }
271     { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
272   }
273   {
274     \bool_set_true:N \l__enumext_standar_first_bool
275     \tl_gset:Nn \g__enumext_envir_name_tl { enumext }
276     \tl_gset:Ne \g__enumext_start_line_tl
277       {
278         on~line~\exp_not:V \inputlineno
279       }
280   }
281   \bool_lazy_all:nT
282   {
283     { \bool_if_p:N \g__enumext_starred_bool }
284     { \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
285     { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
286   }
287   {
288     \bool_set_true:N \l__enumext_starred_first_bool
289     \tl_gset:Nn \g__enumext_envir_name_tl { enumext* }
290     \tl_gset:Ne \g__enumext_start_line_tl
291       {
292         on~line~\exp_not:V \inputlineno
293       }
294   }
295 }

```

(End of definition for `\__enumext_is_not_nested:` and `\__enumext_is_on_first_level:`)

`\__enumext_keyans_name_and_start:`

The function `\__enumext_keyans_name_and_start:` will save the start line number and name of the environments `keyans`, `keyans*` and `keyanspic` in the variables `\l__enumext_check_start_line_env_tl` and `\l__enumext_envir_name_tl` to use in the `\__enumext_check_starred_cmd:n` function.

```

296 \cs_new_protected:Nn \__enumext_keyans_name_and_start:
297 {
298   \str_case:en { \@currentenvir }
299   {
300     {keyans}
301     {
302       \tl_set:Nn \l__enumext_envir_name_tl { keyans }
303       \tl_set:Ne \l__enumext_check_start_line_env_tl
304         {
305           in~'keyans'~start~on~line~\exp_not:V \inputlineno
306         }
307     }
308     {keyans*}
309     {
310       \tl_set:Nn \l__enumext_envir_name_tl { keyans* }
311       \tl_set:Ne \l__enumext_check_start_line_env_tl
312         {
313           in~'keyans*'~start~on~line~\exp_not:V \inputlineno
314         }
315     }
316     {keyanspic}
317     {
318       \tl_set:Nn \l__enumext_envir_name_tl { keyanspic }
319       \tl_set:Ne \l__enumext_check_start_line_env_tl
320         {
321           in~'keyanspic'~start~on~line~\exp_not:V \inputlineno
322         }
323     }
324   }

```

```

324     }
325 }

```

(End of definition for `\__enumext_keyans_name_and_start:`)

### 13.5.2 Utilities for log and terminal

The function `\__enumext_reset_global_vars:` will be passed to the function `\__enumext_execute_after_env:` and will return the global variables to their default values after being used.

```

326 \cs_new_protected:Nn \__enumext_reset_global_vars:
327 {
328     \__enumext_reset_global_int:
329     \__enumext_reset_global_bool:
330     \__enumext_reset_global_tl:
331 }
332 \cs_new_protected:Nn \__enumext_reset_global_int:
333 {
334     \int_gzero:N \g__enumext_item_number_int
335     \int_gzero:N \g__enumext_item_anskey_int
336     \int_gzero:N \g__enumext_item_answer_diff_int
337 }
338 \cs_new_protected:Nn \__enumext_reset_global_bool:
339 {
340     \bool_gset_false:N \g__enumext_check_ans_key_bool
341     \bool_gset_false:N \g__enumext_standar_bool
342     \bool_gset_false:N \g__enumext_starred_bool
343 }
344 \cs_new_protected:Nn \__enumext_reset_global_tl:
345 {
346     \tl_gclear:N \g__enumext_store_name_tl
347     \tl_gclear:N \g__enumext_start_line_tl
348     \tl_gclear:N \g__enumext_envir_name_tl
349 }

```

(End of definition for `\__enumext_reset_global_vars:` and others.)

The function `\__enumext_log_global_vars:` will be passed to the function `\__enumext_execute_after_env:` and write to the `.log` file the number of elements saved in the *prop list* and *sequence* created by the `save-ans` key along with the value of the integer variable created for the `resume` key.

```

350 \cs_new_protected:Nn \__enumext_log_global_vars:
351 {
352     \msg_log:nneeee { enumext } { prop-seq-int-hook }
353     { \g__enumext_store_name_tl }
354     { \prop_count:c { g__enumext_ \g__enumext_store_name_tl _prop } }
355     { \seq_count:c { g__enumext_ \g__enumext_store_name_tl _seq } }
356     { \int_use:c { g__enumext_resume_ \g__enumext_store_name_tl _int } }
357 }

```

The function `\__enumext_log_answer_vars:` will be passed to the function `\__enumext_execute_after_env:` and write to the `.log` file the number of items and answers along with the difference between them.

```

358 \cs_new_protected:Nn \__enumext_log_answer_vars:
359 {
360     \msg_log:nneeee { enumext } { item-answer-hook }
361     { \int_use:N \g__enumext_item_number_int }
362     { \int_use:N \g__enumext_item_anskey_int }
363     { \int_eval:n { \g__enumext_item_number_int - \g__enumext_item_anskey_int } }
364 }

```

(End of definition for `\__enumext_log_global_vars:` and `\__enumext_log_answer_vars:`)

## 13.6 Copying list and minipage environments

The `list` environment provided by  $\TeX$  has the following plain form:

```

\list{⟨arg one⟩}{⟨arg two⟩}
  \item[⟨opt⟩]
\endlist

```

And `minipage` environment provided by  $\TeX$  has the following (simplified) plain form:

```

\minipage[⟨pos⟩][⟨height⟩][⟨inner-pos⟩]{⟨width⟩}
  ⟨internal implement⟩
\endminipage

```

As a precaution we copy them using `\__enumext_at_begin_document:n` in case any package redefines the `\list` environment or a related command.

For compatibility with *tagged* PDF we should use `\NewCommandCopy` and not `\cs_new_eq:NN` for `\item`. When *tagged* PDF is active `\item` is redefined using `\ltxcmd` (see `latex-lab-block`[19]).

```
\__enumext_start_list:nn
  \__enumext_stop_list:
  \__enumext_item_std:w
  \__enumext_minipage:w
  \__enumext_endminipage:
```

The functions `\__enumext_start_list:nn` and `\__enumext_stop_list:` correspond to copies of `\list` and `\endlist` from plain definition of `\list` environment, the function `\__enumext_item_std:w` is a copy of the `\item` command.

```
365 \__enumext_at_begin_document:n
366 {
367   \cs_new_eq:NN \__enumext_start_list:nn \list
368   \cs_new_eq:NN \__enumext_stop_list: \endlist
369   \NewCommandCopy \__enumext_item_std:w \item
370 }
```

The functions `\__enumext_minipage:w` and `\__enumext_endminipage:` correspond to copies of `\minipage` and `\endminipage` from plain definition of `\minipage` environment.

```
371 \__enumext_at_begin_document:n
372 {
373   \cs_new_eq:NN \__enumext_minipage:w \minipage
374   \cs_new_eq:NN \__enumext_endminipage: \endminipage
375 }
```

(End of definition for `\__enumext_start_list:nn` and others.)

### 13.7 Compatibility with hyperref and footnotehyper

```
\__enumext_after_hyperref:
  \__enumext_hypertarget:nn
  \__enumext_phantomsection:
```

First we define the necessary rules using “hooks” to determine if the `hyperref` package is loaded.

```
376 \hook_gput_code:nnn { begindocument } { enumext } { \__enumext_after_hyperref: }
377 \hook_gset_rule:nnnn { begindocument } { enumext } { after } { hyperref }
```

The function `\__enumext_after_hyperref:` sets the state of the boolean variable `\l__enumext_hyperref_bool` to “true” if the package is loaded. At this point we will use the public macro `\IfHyperBoolean` to determine if the `hyperfootnotes=true` key is present, if so, we set the state of the boolean variable `\__enumext_footnotes_key_bool` to “true”.

```
378 \cs_new_protected:Nn \__enumext_after_hyperref:
379 {
380   \IfPackageLoadedT { hyperref }
381   {
382     \msg_info:nnn { enumext } { package-load } { hyperref }
383     \bool_set_true:N \l__enumext_hyperref_bool
384     \IfHyperBoolean{hyperfootnotes}
385     {
386       \bool_set_true:N \l__enumext_footnotes_key_bool
387     }
388   }
389 }
```

If the state of the variable `\l__enumext_footnotes_key_bool` is true we will check if the package `footnotehyper` is loaded, in case it is not present, we will set the value of `\l__enumext_footnotes_key_bool` to false and we will redefine `\footnote`.

```
390 \bool_if:NT \l__enumext_footnotes_key_bool
391 {
392   \IfPackageLoadedTF { footnotehyper }
393   {
394     \msg_info:nnn { enumext } { package-load } { footnotehyper }
395   }
396   {
397     \bool_set_false:N \l__enumext_footnotes_key_bool
398   }
399 }
```

The functions `\__enumext_hypertarget:nn` and `\__enumext_phantomsection:` correspond to the internal copies of `\hypertarget` and `\phantomsection`. If the boolean variable `\l__enumext_hyperref_bool` is false the functions `\__enumext_hypertarget:nn` and `\__enumext_phantomsection:` will be disabled.

```
400 \bool_if:NTF \l__enumext_hyperref_bool
401 {
402   \cs_new_eq:NN \__enumext_hypertarget:nn \hypertarget
403   \cs_new_eq:NN \__enumext_phantomsection: \phantomsection
404 }
405 {
406   \cs_new_eq:NN \__enumext_hypertarget:nn \use_none:nn
```

```

407         \cs_new_eq:NN \__enumext_phantomsection: \prg_do_nothing:
408     }
409 }

```

(End of definition for `\__enumext_after_hyperref:`, `\__enumext_hypertarget:nn`, and `\__enumext_phantomsection:`.)

`\__enumext_newlabel:nn` The function `\__enumext_newlabel:nn` write the information to the `.aux` file when using the `save-ref` key. The arguments taken by the function are:

#1: `\l__enumext_newlabel_arg_one_tl`

#2: `\l__enumext_newlabel_arg_two_tl`

🔗 The trick here is to manage the number of arguments passed to `\newlabel{#1}{#2}` according to the presence of the `hyperref` package.

```

410 \cs_new_protected:Npn \__enumext_newlabel:nn #1 #2
411 {
412     \protected@write \@auxout { }
413     {
414         \token_to_str:N \newlabel {#1}
415         {
416             {#2}
417             \bool_if:NT \__enumext_hyperref_bool
418             { { \thepage } {#2} {#1} }
419             { }
420         }
421     }
422     \__enumext_hypertarget:nn {#1} { }
423     \__enumext_phantomsection:
424 }

```

(End of definition for `\__enumext_newlabel:nn`.)

### 13.8 Internal redefining `\footnote` command

To keep the correct numbering of `\footnote` and to make it work correctly in the `enumext*` and `keyans*` environments and `mini-env` key it is necessary to redefine the `\footnote` command. This implementation is adapted from the answer given by Clea F. Rees (@cfr) in [footnotes in boxes compatible with hyperref](#).

`\__enumext_footnotetext:nn` `\__enumext_renew_footnote:` `\__enumext_print_footnote:` `\__enumext_renew_footnote_mini:` `\__enumext_print_footnote_mini:` Redefinition of the `\footnote` command using `\footnotetext` and `\footnotemark` for the `mini-env` key in the `enumext` and `keyans` environments.

```

425 \cs_new_protected:Nn \__enumext_footnotetext:nn
426 {
427     \footnotetext[#1]{#2}
428 }
429 \cs_new_protected:Nn \__enumext_renew_footnote:
430 {
431     \RenewDocumentCommand \footnote { o +m }
432     {
433         \tl_if_novalue:nTF {##1}
434         {
435             \stepcounter{footnote}
436             \int_gset_eq:Nc \g__enumext_footnote_standar_int { c@footnote }
437         }
438         {
439             \int_gset:Nn \g__enumext_footnote_standar_int { ##1 }
440         }
441         \footnotemark [ \g__enumext_footnote_standar_int ]
442         \seq_gput_right:Nn \g__enumext_footnote_standar_arg_seq { ##2 }
443         \seq_gput_right:NV
444             \g__enumext_footnote_standar_int_seq \g__enumext_footnote_standar_int
445     }
446 }
447 \cs_new_protected:Nn \__enumext_print_footnote:
448 {
449     \seq_if_empty:NF \g__enumext_footnote_standar_int_seq
450     {
451         \seq_map_pairwise_function:NNN
452             \g__enumext_footnote_standar_int_seq
453             \g__enumext_footnote_standar_arg_seq
454             \__enumext_footnotetext:nn
455     }
456     \seq_gclear:N \g__enumext_footnote_standar_arg_seq
457     \seq_gclear:N \g__enumext_footnote_standar_int_seq
458 }

```

The `enumext*` and `keyans*` environments are implemented using `minipage` so we must also redefine `\footnote` to keep these numbering as if it were part of the document.

```

459 \cs_new_protected:Nn \__enumext_renew_footnote_mini:
460 {
461   \RenewDocumentCommand \footnote { o +m }
462   {
463     \tl_if_novalue:nTF {##1}
464     {
465       \stepcounter{footnote}
466       \int_gset_eq:Nc \g__enumext_footnote_starred_int { c@footnote }
467     }
468     {
469       \int_gset:Nn \g__enumext_footnote_starred_int { ##1 }
470     }
471     \footnotemark [ \g__enumext_footnote_starred_int ]
472     \seq_gput_right:Nn \g__enumext_footnote_starred_arg_seq { ##2 }
473     \seq_gput_right:NV
474       \g__enumext_footnote_starred_int_seq \g__enumext_footnote_starred_int
475   }
476 }
477 \cs_new_protected:Nn \__enumext_print_footnote_mini:
478 {

544     }
545   }
546 }

```

In `enumext*` and `keyans*` environments we need to use “hooks” to print `\footnote` with support for *tagged* PDF.

```

547 \__enumext_after_env:nn { enumext* }
548 {
549   \__enumext_print_footnote_starred:
550 }
551 \__enumext_after_env:nn { keyans* }
552 {
553   \__enumext_print_footnote_starred:
554 }

```

(End of definition for `\__enumext_renew_footnote_standar:` and others.)

### 13.9 The internal minipage environment

```

\__enumext_internal_mini_page:
__enumext_mini_env*

```

The function `\__enumext_internal_mini_page:` creates a internal `__enumext_mini_page` environment (*custom version* of `minipage`) setting the `\if@minipage` switch to “false” to allow spaces at the “above” of the environment, plus we will add `\skip_vertical:N \c_zero_skip` to maintain alignment on “top” in the first part and `\skip_vertical:N \c_zero_skip` in the second part to allow spaces “below”. This environment will be used internally by the `mini-env` key, it is NOT documented in the user interface and is for internal use only. Within this environment we redefine `\footnote` to make them look the same as if they were elsewhere in the document. This implementation is adapted from the answer given by Max Chernoff (@MaxChernoff) in [Customize minipage to support spaces below it](#).

- This function is passed to the function `\__enumext_safe_exec:` in the `enumext` environment definition (§13.42) and `\__enumext_safe_exec_vii:` in the `enumext*` environment definition (§13.47).

```

555 \cs_new_protected:Nn \__enumext_internal_mini_page:
556 {
557   \int_compare:nNnT { \l__enumext_level_int } = { 0 }
558   {
559     \DeclareDocumentEnvironment{__enumext_mini_page}{ m }
560     {
561       \__enumext_renew_footnote_standar:
562       \__enumext_minipage:w [ t ] { ##1 }
563       \legacy_if_gset_false:n { @minipage }
564       \skip_vertical:N \c_zero_skip
565     }
566     {
567       \skip_vertical:N \c_zero_skip
568       \__enumext_endminipage:
569       \__enumext_print_footnote_standar:
570     }
571   }

```

```
572 }
```

(End of definition for `\__enumext_internal_mini_page:` and `\__enumext_mini_env*`.)

### 13.10 Definition of public dimension

The package `enumext` only provides a single public dimension `\itemwidth` and is intended for user convenience only and is not for internal use as such. This dimension is set in all environments and is only used by the `wrap-ans` key at its default value.

```
573 \dim_zero_new:N \itemwidth
```

### 13.11 Definition of counters

To create the necessary “counters” we must first make sure that they are not already defined by the user or a package such as `enumitem`, otherwise a error will be returned and the package loading will be aborted. The arguments taken by the function are:

- #1:** A token list `\__enumext_counter_X_tl` for “store” the counter’s name.  
**#2:** The counter’s name.

```
enumXi
enumXii
enumXiii
enumXiv
enumXv
enumXvi
enumXvii
enumXviii
574 \cs_new_protected:Npn \__enumext_define_counter:Nn #1 #2
575 {
576   \cs_if_exist:cTF { c@ #2 }
577   { \msg_fatal:nnn { enumext } { counters }{ #2 } }
578   {
579     \tl_set:Nn #1 { #2 }
580     \newcounter { #2 }
581   }
582 }
```

The counters created here are `enumXi`, `enumXii`, `enumXiii` and `enumXiv` for `enumext` environment, `enumXv` for `keyans` environment, `enumXvi` for `keyanspic` environment, `enumXvii` for `enumext*` and `enumXviii` for the `keyans*` environments.

```
583 \__enumext_define_counter:Nn \__enumext_counter_i_tl { enumXi }
584 \__enumext_define_counter:Nn \__enumext_counter_ii_tl { enumXii }
585 \__enumext_define_counter:Nn \__enumext_counter_iii_tl { enumXiii }
586 \__enumext_define_counter:Nn \__enumext_counter_iv_tl { enumXiv }
587 \__enumext_define_counter:Nn \__enumext_counter_v_tl { enumXv }
588 \__enumext_define_counter:Nn \__enumext_counter_vi_tl { enumXvi }
589 \__enumext_define_counter:Nn \__enumext_counter_vii_tl { enumXvii }
590 \__enumext_define_counter:Nn \__enumext_counter_viii_tl { enumXviii }
```

(End of definition for `\__enumext_define_counter:Nn` and others.)

In version 1.6 the command `\resetenumext` (§13.27) was added which internally uses `\counterwithin*` so for its correct operation, we will create “real counters” instead of the “integer variables” for the keys `resume` and `resume*`.

```
\c@__enumext_resume_i_int
\c@__enumext_resume_ii_int
\c@__enumext_resume_iii_int
\c@__enumext_resume_iv_int
\c@__enumext_resume_vii_int
591 \cs_set_protected:Npn \__enumext_tmp:n #1
592 {
593   \cs_if_exist:cTF { c@ __enumext_resume_#1_int }
594   { \msg_fatal:nne { enumext } { counters }{ __enumext_resume_#1_int } }
595   {
596     \newcounter { __enumext_resume_#1_int }
597   }
598 }
599 \clist_map_inline:nn {i,ii,iii,iv,vii} { \__enumext_tmp:n {#1} }
```

(End of definition for `\c@__enumext_resume_i_int` and others.)

### 13.12 Definition of labels

This part of the code is inspired by the `enumitem` package. The idea is to be able to access the counters using `\arabic*`, `\Alph*`, `\alph*`, `\Roman*` and `\roman*` to use them in the `label` key.

- Direct support for this is provided since  $\text{\LaTeX}$  release 2025-06-01[13], but we will keep the original implementation so as not to hinder the internal “label and ref” system.

These `\counters` will be used as default `\labels` if the `label` key is not used for the different levels of the `enumext`, `enumext*`, `keyans` and `keyans*` environments, so it is necessary to get a default value for `labelwidth` from these `\labels` at the same time.

```
600 \cs_new_protected:Npn \__enumext_register_default_label_wd:Nn #1 #2
601 {
602   \tl_const:cn { c__enumext_widest_ \cs_to_str:N #1 _tl } {#2}
603   \tl_gput_right:Nn \g__enumext_counter_styles_tl {#1}
```

```

604   }
605   \__enumext_register_default_label_wd:Nn \arabic { 0 }
606   \__enumext_register_default_label_wd:Nn \Alph   { M }
607   \__enumext_register_default_label_wd:Nn \alph   { m }
608   \__enumext_register_default_label_wd:Nn \Roman  { VIII }
609   \__enumext_register_default_label_wd:Nn \roman  { viii }

```

(End of definition for \\_\_enumext\_register\_default\_label\_wd:Nn.)

```

\__enumext_label_width_by_box:Nn
\__enumext_label_width_by_box:cv

```

The function \\_\_enumext\_label\_width\_by\_box:Nn set the default \labelwidth using a box width if no \labelwidth key is passed.

```

610 \cs_new_protected:Npn \__enumext_label_width_by_box:Nn #1 #2
611 {
612   \hbox_set:Nn \l__enumext_label_width_by_box {#2}
613   \dim_set:Nn #1 { \box_wd:N \l__enumext_label_width_by_box }
614 }
615 \cs_generate_variant:Nn \__enumext_label_width_by_box:Nn { cv }

```

(End of definition for \\_\_enumext\_label\_width\_by\_box:Nn.)

```

\__enumext_label_style:Nnn
\__enumext_label_style:cvn

```

The function \\_\_enumext\_label\_style:Nnn is used by the \label key to creates the variables containing the *<label style>* and will allow to use \arabic\*, \Alph\*, \alph\*, \Roman\* and \roman\* as arguments. It loops through the defined counter styles in \g\_\_enumext\_counter\_styles\_tl (\arabic, \alph, \Alph, \roman and \Roman) for example, looking for \roman\* and replacing that by \roman{<counter>}, and doing the same for the \g\_\_enumext\_widest\_label\_tl to keep both in sync.

```

616 \cs_new_protected:Npn \__enumext_label_style:Nnn #1 #2 #3
617 {
618   \tl_clear_new:N #1
619   \tl_put_right:Ne #1 { \tl_trim_spaces:n {#3} }
620   \tl_gset_eq:NN \g__enumext_widest_label_tl #1
621   \tl_map_inline:Nn \g__enumext_counter_styles_tl
622   {
623     \tl_replace_all:Nne #1 { ##1* } { \exp_not:N ##1 {#2} }
624     \tl_greplace_all:Nne \g__enumext_widest_label_tl { ##1* }
625     { \tl_use:c { c__enumext_widest_ \cs_to_str:N ##1 _tl } }
626   }
627   \__enumext_label_width_by_box:Nn \l__enumext_current_widest_dim
628   { \tl_use:N \g__enumext_widest_label_tl }
629   \tl_set_eq:cN { the #2 } #1
630 }
631 \cs_generate_variant:Nn \__enumext_label_style:Nnn { cvn }

```

(End of definition for \\_\_enumext\_label\_style:Nnn.)

### 13.13 Setting keys associated with label

When *tagged* PDF is active \makelabel is redefined using \makebox to work correctly (§13.37). From the user side it is convenient to have a key that allows using this redefinition with \makebox without having \IfDocumentMetadataTF active.

mode-box

We define the key `mode-box` only for the “first level” of `enumext` and `enumext*` environments.

```

632 \cs_set_protected:Npn \__enumext_tmp:n #1
633 {
634   \keys_define:nn { enumext / #1 }
635   {
636     mode-box .bool_set:N = \l__enumext_mode_box_bool,
637     mode-box .initial:n = false,
638     mode-box .value_forbidden:n = true,
639   }
640 }
641 \clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {#1} }

```

(End of definition for mode-box.)

```

font
labelsep
labelwidth
wrap-label
wrap-label*

```

Definition of keys `font`, `labelsep`, `labelwidth`, `wrap-label` and `wrap-label*` keys for `enumext` and `keyans` environments.

```

642 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
643 {
644   \keys_define:nn { enumext / #1 }
645   {
646     font .tl_set:c = { \__enumext_label_font_style_#2_tl },

```

```

647     font .value_required:n = true,
648     labelsep .dim_set:c = { l__enumext_labelsep_#2_dim },
649     labelsep .initial:n = {0.3333em},
650     labelsep .value_required:n = true,
651     labelwidth .dim_set:c = { l__enumext_labelwidth_#2_dim },
652     labelwidth .value_required:n = true,
653     wrap-label .cs_set_protected:cp = { __enumext_wrapper_label_#2:n } ##1,
654     wrap-label .initial:n = {##1},
655     wrap-label .value_required:n = true,
656     wrap-label* .code:n = {
657         \bool_set_true:c { l__enumext_wrap_label_opt_#2_bool }
658         \keys_set:nn { enumext / #1 } { wrap-label = {##1} }
659     },
660     wrap-label* .value_required:n = true,
661 }
662 }
663 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for font and others.)

align The align key is implemented differently for “starred” and “non starred” environments. For compatibility with tagged PDF we must set \l\_\_enumext\_align\_label\_pos\_X\_str.

```

664 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
665 {
666     \keys_define:nn { enumext / #1 }
667     {
668         align .choice:,
669         align / left .code:n =
670             {
671                 \tl_clear:c { l__enumext_label_fill_left_#2_tl }
672                 \tl_set:cn { l__enumext_label_fill_right_#2_tl } { \hfill }
673                 \str_set:cn { l__enumext_align_label_pos_#2_str } { l }
674             },
675         align / right .code:n =
676             {
677                 \tl_set:cn { l__enumext_label_fill_left_#2_tl } { \hfill }
678                 \tl_clear:c { l__enumext_label_fill_right_#2_tl }
679                 \str_set:cn { l__enumext_align_label_pos_#2_str } { r }
680             },
681         align / center .code:n =
682             {
683                 \tl_set:cn { l__enumext_label_fill_left_#2_tl } { \hfill }
684                 \tl_set:cn { l__enumext_label_fill_right_#2_tl } { \hfill }
685                 \str_set:cn { l__enumext_align_label_pos_#2_str } { c }
686             },
687         align / unknown .code:n =
688             \msg_error:nneee { enumext } { unknown-choice }
689             { align } { left,~right,~ center } { \exp_not:n {##1} },
690         align .initial:n = left,
691         align .value_required:n = true,
692     }
693 }
694 \clist_map_inline:nn
695 {
696     {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {keyans}{v}
697 }
698 { \__enumext_tmp:nn #1 }
699 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
700 {
701     \keys_define:nn { enumext / #1 }
702     {
703         align .choice:,
704         align / left .code:n = \str_set:cn { l__enumext_align_label_#2_str } { l },
705         align / right .code:n = \str_set:cn { l__enumext_align_label_#2_str } { r },
706         align / center .code:n = \str_set:cn { l__enumext_align_label_#2_str } { c },
707         align / unknown .code:n =
708             \msg_error:nneee { enumext } { unknown-choice }
709             { align } { left,~right,~ center } { \exp_not:n {##1} },
710         align .initial:n = left,
711         align .value_required:n = true,

```

```

712     }
713   }
714   \clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }

```

(End of definition for `align`.)

### 13.14 Setting label and ref keys

The implementation of the keys `label` and `ref` are part of the core of the package `enumext`, here the default values for `<label>`, the value of the variables `\l__enumext_label_X_tl`, the default values for `\labelwidth` and the “*label and ref*” system.

#### 13.14.1 Define and set label and ref keys for enumext environment

Here we set the default `<labels>` of the *four levels* of `enumext` environment, along with the default values for `labelwidth`, `widest` and `ref` keys.

```

label
ref
\__enumext_label_i_tl 715 \cs_set_protected:Npn \__enumext_tmp:nnn #1 #2 #3
\__enumext_label_ii_tl 716 {
\__enumext_label_iii_tl 717   \keys_define:nn { enumext / #1 }
\__enumext_label_iv_tl 718   {
719     label .code:n = {
720       \__enumext_label_style:cvn { \__enumext_label_#2_tl }
721       { \__enumext_counter_#2_tl } {##1}
722       \dim_set_eq:cN { \__enumext_labelwidth_#2_dim }
723       \__enumext_current_widest_dim
724     },
725     label .initial:n = #3,
726     label .value_required:n = true,
727     ref .code:n = \__enumext_standar_ref:nn {#2} {##1},
728     ref .value_required:n = true,
729   }
730 }
731 \__enumext_tmp:nnn { level-1 } { i } { \arabic*. }
732 \__enumext_tmp:nnn { level-2 } { ii } { (\alph*. ) }
733 \__enumext_tmp:nnn { level-3 } { iii } { \roman*. }
734 \__enumext_tmp:nnn { level-4 } { iv } { \Alph*. }

```

(End of definition for `label` and others.)

`\__enumext_standar_ref:nn` The `\__enumext_standar_ref:nn` function will first pass the key *argument* `ref` to the variable `\l__enumext_ref_key_arg_tl` and analyze its state, if it is not *empty* it will set a copy of of the *current counter style* save in `\l__enumext_the_counter_X_tl` to `\l__enumext_ref_the_count_tl` and then set the variable `\l__enumext_renew_counter_X_tl` which will modify `\theenumX`.

```

735 \cs_new_protected:Npn \__enumext_standar_ref:nn #1 #2
736 {
737   \tl_set:Nn \l__enumext_ref_key_arg_tl {#2}
738   \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
739   {
740     \msg_error:nnn { enumext } { key-ref-empty } { enumext }
741   }
742   {
743     \tl_set_eq:Nc \l__enumext_ref_the_count_tl { \__enumext_the_counter_#1_tl }
744     \tl_set:ce { \__enumext_renew_counter_#1_tl }
745     {
746       \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl }
747       { \exp_not:V \l__enumext_ref_key_arg_tl }
748     }
749   }
750 }

```

Finally the function `\__enumext_standar_ref:` will execute the modification for the reference system in the second argument of the environment definition `enumext`.

```

751 \cs_new_protected:Npn \__enumext_standar_ref:
752 {
753   \tl_if_empty:cF { \__enumext_renew_counter_ \__enumext_level: _tl }
754   {
755     \tl_use:c { \__enumext_renew_counter_ \__enumext_level: _tl }
756   }
757 }

```

(End of definition for `\__enumext_standar_ref:nn` and `\__enumext_standar_ref:`.)

### 13.14.2 Define and set label and ref keys for enumext\* and keyans\* environments

Here we set the default  $\langle labels \rangle$  for `enumext*` and `keyans*` environments, along with the default value for `labelwidth` key and `ref` key.

```

label
ref
\l__enumext_label_vii_tl 758 \cs_set_protected:Npn \l__enumext_tmp:nnn #1 #2 #3
\l__enumext_label_viii_tl 759 {
760   \keys_define:nn { enumext / #1 }
761   {
762     label .code:n = {
763       \__enumext_label_style:cvn { \l__enumext_label_#2_tl }
764       { \l__enumext_counter_#2_tl } {##1}
765       \dim_set_eq:cN { \l__enumext_labelwidth_#2_dim }
766       \l__enumext_current_widest_dim
767     },
768     label .initial:n = #3,
769     label .value_required:n = true,
770     ref .code:n = \l__enumext_starred_ref:n {##1},
771     ref .value_required:n = true,
772   }
773 }
774 \l__enumext_tmp:nnn { enumext* } { vii } { \arabic*.}
775 \l__enumext_tmp:nnn { keyans* } { viii } { \Alph*.}

```

(End of definition for `label` and others.)

The implementation of `\l__enumext_starred_ref:n` is the same as that used for the environment `enumext`.

```

776 \cs_new_protected:Npn \l__enumext_starred_ref:n #1
777 {
778   \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
779   \int_compare:nNnT { \l__enumext_level_h_int } = { 1 }
780   {
781     \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
782     {
783       \msg_error:nnn { enumext } { key-ref-empty } { enumext* }
784     }
785     {
786       \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_vii_tl
787       \tl_set:Ne \l__enumext_renew_counter_vii_tl
788       {
789         \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl } { \exp_not:V
790       }
791     }
792   }
793   \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
794   {
795     \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
796     {
797       \msg_error:nnn { enumext } { key-ref-empty } { keyans* }
798     }
799     {
800       \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_viii_tl
801       \tl_set:Ne \l__enumext_renew_counter_viii_tl
802       {
803         \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl } { \exp_not:V
804       }
805     }
806   }
807 }

```

Finally the function `\l__enumext_starred_ref:` will execute the modification for the reference system in the second argument of the `enumext*` and `keyans*` environment definition.

```

808 \cs_new_protected:Npn \l__enumext_starred_ref:
809 {
810   \int_compare:nNnT { \l__enumext_level_h_int } = { 1 }
811   {
812     \tl_if_empty:NF \l__enumext_renew_counter_vii_tl
813     {
814       \tl_use:N \l__enumext_renew_counter_vii_tl
815     }
816   }
817   \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
818   {

```

```

819         \tl_if_empty:NF \l__enumext_renew_counter_viii_tl
820         {
821             \tl_use:N \l__enumext_renew_counter_viii_tl
822         }
823     }
824 }

```

(End of definition for `\__enumext_starred_ref:n` and `\__enumext_starred_ref:.`)

### 13.14.3 Define and set `label` and `ref` keys for `keyans` and `keyanspic` environments

Here we set the default `<label>` for `keyans` and `keyanspic` environment, along with the default value for `labelwidth` if it has not been established and `ref` key. The `keyanspic` environment use the same `<label>` as the `keyans` environment.

```

\l__enumext_label_v_tl
\l__enumext_label_vi_tl
825 \keys_define:nn { enumext / keyans }
826 {
827     label .code:n = {
828         \__enumext_label_style:cnv { \l__enumext_label_v_tl }
829         { \l__enumext_counter_v_tl } {#1}
830         \__enumext_label_style:cnv { \l__enumext_label_vi_tl }
831         { \l__enumext_counter_vi_tl } {#1}
832         \dim_set_eq:NN
833         \l__enumext_labelwidth_v_dim \l__enumext_current_widest_dim
834     },
835     label .initial:n = \Alph*,
836     label .value_required:n = true,
837     ref .code:n = \__enumext_keyans_ref:n {#1},
838     ref .value_required:n = true,
839 }

```

(End of definition for `label` and others.)

The implementation of `\__enumext_keyans_ref:n` is the same as that used for the environment `enumext`.

```

\__enumext_keyans_ref:n
\__enumext_keyans_ref:
840 \cs_new_protected:Npn \__enumext_keyans_ref:n #1
841 {
842     \tl_set:Nn \l__enumext_ref_key_arg_tl {#1}
843     \tl_if_empty:NTF \l__enumext_ref_key_arg_tl
844     {
845         \msg_error:nnn { enumext } { key-ref-empty } { keyans }
846     }
847     {
848         \tl_set_eq:NN \l__enumext_ref_the_count_tl \l__enumext_the_counter_v_tl
849         \tl_put_right:Ne \l__enumext_renew_counter_v_tl
850         {
851             \exp_not:N \renewcommand { \exp_not:V \l__enumext_ref_the_count_tl } { \exp_not:V \l__enumext_the_counter_v_tl }
852         }
853     }
854 }

```

Finally the function `\__enumext_keyans_ref:` will execute the modification for the reference system in the second argument of the `keyans*` environment definition.

```

855 \cs_new_protected:Nn \__enumext_keyans_ref:
856 {
857     \tl_if_empty:NF \l__enumext_renew_counter_v_tl
858     {
859         \tl_use:N \l__enumext_renew_counter_v_tl
860     }
861 }

```

(End of definition for `\__enumext_keyans_ref:n` and `\__enumext_keyans_ref:.`)

### 13.15 Setting `start`, `start*` and `widest` keys

The function `\__enumext_start_from:NNn` used by `start` and `start*` keys take three arguments:

```

\__enumext_start_from:ccn #1: \l__enumext_label_X_tl
\__enumext_start_from:cce #2: \l__enumext_start_X_int
\__enumext_start_from:cce #3: <integer or string>

```

The first argument of this function are the “*counter style*” set by `label` key, the second argument is returned by the function, the third argument can be an `<integer>` or `<string>` of the form `\Alph`, `\alph`, `\Roman` or `\roman`. This effectively allows `start*=A` or `start=1` to be used.

- In version 1.6 it is allowed to pass the `resume` key *without value* by means of the command `\setenumext`, for the correct operation of this we must set the boolean variable `\l__enumext_resume_count_bool` set by the `resume` key *without value* to “false” (§13.26). This is necessary to be able to “reset” the *start value* by means of the `start` or `start*` keys.

```

862 \cs_new_protected:Npn \__enumext_start_from:NNn #1 #2 #3
863 {
864   \bool_set_false:N \l__enumext_resume_count_bool
865   \__enumext_if_is_int:nTF { #3 }
866   {
867     \int_set:Nn #2 {#3}
868   }
869   {
870     \regex_if_match:nVT { \c{Alph} | \c{alph} } #1
871     { \int_set:Nn #2 { \int_from_alph:n {#3} } }
872     \regex_if_match:nVT { \c{Roman} | \c{roman} } #1
873     { \int_set:Nn #2 { \int_from_roman:n {#3} } }
874   }
875 }
876 \cs_generate_variant:Nn \__enumext_start_from:NNn { ccn, cce }

```

(End of definition for `\__enumext_start_from:NNn`.)

```

\__enumext_widest_from:nNNn
\__enumext_widest_from:nccn

```

The function `\__enumext_widest_from:nNNn` used by the `widest` key take four arguments:

- #1: The counter associated with the environment level
- #2: `\l__enumext_label_X_tl`
- #3: `\l__enumext_labelwidth_X_dim`
- #4: *integer or string*

The second and third arguments of this function are the values set by `label` and `labelwidth` keys, the four argument can be an *integer* or *string* of the form `\Alph`, `\alph`, `\Roman` or `\roman`. The value of the four argument is set temporarily for the identified counter in this point (level), then the value is expanded into a “box” and the “width” of the “box” is returned.

```

877 \cs_new_protected:Npn \__enumext_widest_from:nNNn #1 #2 #3 #4
878 {
879   \__enumext_if_is_int:nTF {#4}
880   {
881     \setcounter{enumX#1} { #4 }
882   }
883   {
884     \regex_if_match:nVT { \c{Alph} | \c{alph} } #2
885     { \setcounter{enumX#1} { \int_from_alph:n {#4} } }
886     \regex_if_match:nVT { \c{Alph} | \c{alph} } #2
887     { \setcounter{enumX#1} { \int_from_roman:n {#4} } }
888   }
889   \__enumext_label_width_by_box:cv
890   { \l__enumext_labelwidth_#1_dim } { \l__enumext_label_#1_tl }
891 }
892 \cs_generate_variant:Nn \__enumext_widest_from:nNNn { nccn }

```

(End of definition for `\__enumext_widest_from:nNNn`.)

Now define and set `start*`, `start` and `widest` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

`start*`

`widest`

```

893 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
894 {
895   \keys_define:nn { enumext / #1 }
896   {
897     start* .code:n = {
898       \__enumext_start_from:ccn
899       { \l__enumext_label_#2_tl }
900       { \l__enumext_start_#2_int } {##1}
901     },
902     start* .value_required:n = true,
903     start .code:n = {
904       \__enumext_start_from:cce
905       { \l__enumext_label_#2_tl }
906       { \l__enumext_start_#2_int } { \int_eval:n {##1} }
907     },
908     start .initial:n = 1,
909     start .value_required:n = true,
910     widest .code:n = {

```

```

911             \__enumext_widest_from:nccn {#2}
912             { \__enumext_label_#2_tl }
913             { \__enumext_labelwidth_#2_dim } {##1}
914         },
915         widest .value_required:n = true,
916     }
917 }
918 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for `start`, `start*`, and `widest`.)

### 13.16 Setting keys for penaltys

The three parameters `\@beginparpenalty`, `\@itempenalty` and `\@endparpenalty` work together to ensure that list environments look good, avoiding unsightly page breaks that can break the flow of the `list`, so it's a good idea to have a `<keys>` to access these.

```

919 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
920 {
921     \keys_define:nn { enumext / #1 }
922     {
923         beginpenalty .int_set:c = { \__enumext_beginparpenalty_#2_int },
924         beginpenalty .initial:n = -51,
925         beginpenalty .value_required:n = true,
926         midpenalty .int_set:c = { \__enumext_itempenalty_#2_int },
927         midpenalty .initial:n = -51,
928         midpenalty .value_required:n = true,
929         endpenalty .int_set:c = { \__enumext_endparpenalty_#2_int },
930         endpenalty .initial:n = -51,
931         endpenalty .value_required:n = true,
932     }
933 }
934 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for `beginpenalty`, `midpenalty`, and `endpenalty`.)

### 13.17 Setting keys for vertical spaces

Define and set `topsep`, `partopsep`, `parsep`, `itemsep`, `noitemsep` and `nosep` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```

935 \cs_set_protected:Npn \__enumext_tmp:nnnnnn #1 #2 #3 #4 #5 #6
936 {
937     \keys_define:nn { enumext / #1 }
938     {
939         topsep .skip_set:c = { \__enumext_topsep_#2_skip },
940         topsep .initial:n = {#3},
941         topsep .value_required:n = true,
942         partopsep .skip_set:c = { \__enumext_partopsep_#2_skip },
943         partopsep .initial:n = {#4},
944         partopsep .value_required:n = true,
945         parsep .skip_set:c = { \__enumext_parsep_#2_skip },
946         parsep .initial:n = {#5},
947         parsep .value_required:n = true,
948         itemsep .skip_set:c = { \__enumext_itemsep_#2_skip },
949         itemsep .initial:n = {#6},
950         itemsep .value_required:n = true,
951         noitemsep .meta:n = { itemsep = 0pt, parsep = 0pt },
952         noitemsep .value_forbidden:n = true,
953         nosepp .meta:n = {
954             itemsep = 0pt, parsep = 0pt,
955             topsep = 0pt, partopsep = 0pt,
956         },
957         nosepp .value_forbidden:n = true,
958     }
959 }

```

Now we set the values based on standard `article` class in `10pt`.

```

960 \__enumext_tmp:nnnnnn { level-1 } { i } { 8.0pt plus 2.0pt minus 4.0pt }
961 { 2.0pt plus 1.0pt minus 1.0pt } { 4.0pt plus 2.0pt minus 1.0pt }
962 { 4.0pt plus 2.0pt minus 1.0pt }
963 \__enumext_tmp:nnnnnn { level-2 } { ii } { 4.0pt plus 2.0pt minus 1.0pt }
964 { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
965 { 2.0pt plus 1.0pt minus 1.0pt }

```

```

966 \__enumext_tmp:nnnnnn { level-3 } { iii } { 2.0pt plus 1.0pt minus 1.0pt }
967 { 1.0pt minus 1.0pt } { 0pt } { 2.0pt plus 1.0pt minus 1.0pt }
968 \__enumext_tmp:nnnnnn { level-4 } { iv } { 2.0pt plus 1.0pt minus 1.0pt }
969 { 1.0pt minus 1.0pt } { 0pt } { 2.0pt plus 1.0pt minus 1.0pt }
970 \__enumext_tmp:nnnnnn { keyans } { v } { 4.0pt plus 2.0pt minus 1.0pt }
971 { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
972 { 2.0pt plus 1.0pt minus 1.0pt }
973 \__enumext_tmp:nnnnnn { enumext* } { vii } { 8.0pt plus 2.0pt minus 4.0pt }
974 { 2.0pt plus 1.0pt minus 1.0pt } { 4.0pt plus 2.0pt minus 1.0pt }
975 { 4.0pt plus 2.0pt minus 1.0pt }
976 \__enumext_tmp:nnnnnn { keyans* } { viii } { 4.0pt plus 2.0pt minus 1.0pt }
977 { 2.0pt plus 1.0pt minus 1.0pt } { 2.0pt plus 1.0pt minus 1.0pt }
978 { 2.0pt plus 1.0pt minus 1.0pt }

```

(End of definition for *topsep* and others.)

### 13.18 Setting base-fix key

When nesting starting right after `\item` (without material between them) there is a problem with the alignment of the *baseline* between the two environments. One way to get around this problem is to place `\mode_leave_vertical:` apply `\vspace{-\baselineskip}` and set `\topsep=0pt` for the “first level” of the nested `enumext` environment.

`base-fix` We define the key `base-fix` only for the “first level” of `enumext` environment.

```

\__enumext_nested_base_line_fix:
979 \keys_define:nn { enumext / level-1 }
980 {
981   base-fix .bool_set:N = \__enumext_base_line_fix_bool,
982   base-fix .initial:n = false,
983   base-fix .value_forbidden:n = true,
984 }

```

The function `\__enumext_nested_base_line_fix:` passed to the `\__enumext_parse_keys:n` function in the definition of the `enumext` environment (§13.42) will be responsible for applying the *baseline correction* and adjusting the `\keys` for the `enumext` environment and the `\printkeyans` with *starred argument* ‘\*’ (§13.50).

We will first implement the function code from the user side of the `base-fix` key, that is, only the user knows when it is necessary to apply it within the document in which case the variable `\__enumext_print_keyans_star_bool` set by the `\printkeyans` command is false and the variable `\__enumext_base_line_fix_bool` is true.

We set the values of the keys `topsep`, `above` and `above*` for the “first level” of `enumext` environment equal to `0pt` and finally set the variable `\__enumext_base_line_fix_bool` to false.

```

985 \cs_new_protected:Nn \__enumext_nested_base_line_fix:
986 {
987   \bool_lazy_all:nT
988   {
989     { \bool_if_p:N \__enumext_starred_first_bool }
990     { \bool_if_p:N \__enumext_base_line_fix_bool }
991     { \bool_not_p:n { \__enumext_print_keyans_star_bool } }
992   }
993   {
994     \mode_leave_vertical:
995     \vspace { -\dim_eval:n { \baselineskip + \parsep } }
996     \keys_set:nn { enumext / level-1 }
997     {
998       topsep = 0pt, above = 0pt, above* = 0pt,
999     }
1000   }

```

When we are running the `\printkeyans` command with the *starred argument* ‘\*’ the variable `\__enumext_print_keyans_star_bool` is true and we can run a simplified version of `\vspace` using `\skip_vertical:n`.

```

1001 \bool_lazy_and:nnT
1002 { \bool_if_p:N \__enumext_starred_first_bool }
1003 { \bool_if_p:N \__enumext_print_keyans_star_bool }
1004 {
1005   \mode_leave_vertical:
1006   \skip_vertical:n { -\baselineskip }
1007   \skip_vertical:N \c_zero_skip
1008   \keys_set:nn { enumext / level-1 }
1009   {
1010     topsep = 0pt, above = 0pt, above* = 0pt,

```

```

1011     }
1012   }
1013   \bool_set_false:N \__enumext_base_line_fix_bool
1014 }

```

(End of definition for `base-fix` and `\__enumext_nested_base_line_fix:`.)

### 13.19 Setting keys for horizontal spaces

Define and set `itemindent`, `rightmargin`, `listparindent`, `list-offset` and `list-indent` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```

1015 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1016 {
1017   \keys_define:nn { enumext / #1 }
1018   {
1019     itemindent .dim_set:c = { l__enumext_fake_item_indent_#2_dim },
1020     itemindent .value_required:n = true,
1021     rightmargin .dim_set:c = { l__enumext_rightmargin_#2_dim },
1022     rightmargin .value_required:n = true,
1023     listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
1024     listparindent .value_required:n = true,
1025     list-offset .dim_set:c = { l__enumext_listoffset_#2_dim },
1026     list-offset .value_required:n = true,
1027     list-indent .code:n =
1028       \bool_set_true:c { l__enumext_leftmargin_tmp_#2_bool }
1029       \dim_set:cn { l__enumext_leftmargin_tmp_#2_dim } {##1},
1030     list-indent .value_required:n = true,
1031   }
1032 }
1033 \clist_map_inline:nn
1034 {
1035   {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {keyans}{v}
1036 }
1037 { \__enumext_tmp:nn #1 }

```

(End of definition for `itemindent` and others.)

For `enumext*` and `keyans*` environments the situation is a bit different, the `list-indent` key behaves like the `list-offset` key.

```

1038 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1039 {
1040   \keys_define:nn { enumext / #1 }
1041   {
1042     itemindent .dim_set:c = { l__enumext_fake_item_indent_#2_dim },
1043     itemindent .value_required:n = true,
1044     rightmargin .dim_set:c = { l__enumext_rightmargin_#2_dim },
1045     rightmargin .value_required:n = true,
1046     listparindent .dim_set:c = { l__enumext_listparindent_#2_dim },
1047     listparindent .value_required:n = true,
1048     list-offset .dim_set:c = { l__enumext_listoffset_#2_dim },
1049     list-offset .value_required:n = true,
1050     list-indent .meta:n = { list-offset = ##1 },
1051     list-indent .value_required:n = true,
1052   }
1053 }
1054 \clist_map_inline:nn
1055 {
1056   {enumext*}{vii}, {keyans*}{viii}
1057 }
1058 { \__enumext_tmp:nn #1 }

```

#### 13.19.1 Functions for setting the fake `itemindent`

The `itemindent` key does not set the value of `\itemindent`, it only sets the value of the *horizontal space* applied using `\skip_horizontal:N`. We will store this value in the variable and only apply it when it is greater than `\opt`. Here I will need to place `\mode_leave_vertical:` and the plain TeX macro `\ignorespaces` to avoid unwanted extra space when using the `itemindent` key.

```

1059 \cs_set_protected:Nn \__enumext_fake_item_indent:
1060 {
1061   \dim_compare:nNt
1062   { \dim_use:c { l__enumext_fake_item_indent_ \__enumext_level: _dim } }
1063   >
1064   { \c_zero_dim }

```

```

1065     {
1066       \tl_set:ce { l__enumext_fake_item_indent_ \__enumext_level: _tl }
1067       {
1068         \exp_not:N \mode_leave_vertical:
1069         \exp_not:n { \skip_horizontal:n }
1070         { \dim_use:c { l__enumext_fake_item_indent_ \__enumext_level: _dim } }
1071         \exp_not:N \ignorespaces
1072       }
1073     }
1074   }
1075   \cs_set_protected:Nn \__enumext_keyans_fake_item_indent:
1076   {
1077     \dim_compare:nNnT
1078     { \l__enumext_fake_item_indent_v_dim } > { \c_zero_dim }
1079     {
1080       \tl_set:Ne \l__enumext_fake_item_indent_v_tl
1081       {
1082         \exp_not:N \mode_leave_vertical:
1083         \exp_not:N \skip_horizontal:N \l__enumext_fake_item_indent_v_dim
1084         \exp_not:N \ignorespaces
1085       }
1086     }
1087   }
1088   \cs_set_protected:Nn \__enumext_fake_item_indent_vii:
1089   {
1090     \dim_compare:nNnT
1091     { \l__enumext_fake_item_indent_vii_dim } > { \c_zero_dim }
1092     {
1093       \tl_set:Ne \l__enumext_fake_item_indent_vii_tl
1094       {
1095         \exp_not:N \skip_horizontal:N \l__enumext_fake_item_indent_vii_dim
1096         \exp_not:N \ignorespaces
1097       }
1098     }
1099   }
1100   \cs_set_protected:Nn \__enumext_fake_item_indent_viii:
1101   {
1102     \dim_compare:nNnT
1103     { \l__enumext_fake_item_indent_viii_dim } > { \c_zero_dim }
1104     {
1105       \tl_set:Ne \l__enumext_fake_item_indent_viii_tl
1106       {
1107         \exp_not:N \skip_horizontal:N \l__enumext_fake_item_indent_viii_dim
1108         \exp_not:N \ignorespaces
1109       }
1110     }
1111   }

```

(End of definition for `\__enumext_fake_item_indent:` and others.)

### 13.20 Setting show-length key

show-length

Define and set `show-length` key for `enumext`, `enumext*`, `keyans` and `keyans*` environments. The function sets the boolean variable `\l__enumext_show_length_X_bool` used in the definition of all environments to “true” and calls the function `\__enumext_show_length:nnn` which prints all the values of the “vertical” and “horizontal” parameters calculated and used.

```

1112 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1113 {
1114   \keys_define:nn { enumext / #1 }
1115   {
1116     show-length .bool_set:c = { l__enumext_show_length_#2_bool },
1117     show-length .initial:n = false,
1118   }
1119 }
1120 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for `show-length`.)

### 13.21 Setting before, after and first keys

before  
before\*  
after  
first

Define and set `before`, `before*`, `after` and `first` keys for `enumext`, `enumext*`, `keyans` and `keyans*` environments.

```

1121 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1122 {
1123   \keys_define:nn { enumext / #1 }
1124   {
1125     before .tl_set:c = { l__enumext_before_no_starred_key_#2_tl },
1126     before .value_required:n = true,
1127     before* .tl_set:c = { l__enumext_before_starred_key_#2_tl },
1128     before* .value_required:n = true,
1129     after .tl_set:c = { l__enumext_after_stop_list_#2_tl },
1130     after .value_required:n = true,
1131     first .tl_set:c = { l__enumext_after_list_args_#2_tl },
1132     first .value_required:n = true,
1133   }
1134 }
1135 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for *before* and others.)

### 13.21.1 Functions for before, after and first keys in enumext

The function `\__enumext_before_args_exec:` executes the `{\code}` set by the `before*` key “before” the `enumext` environment is started. The `{\code}` is executed “without” knowing any definition of the `{\arg two}` of the list: `{\code}\list{\arg one}{\arg two}`.

```

1136 \cs_new_protected:Nn \__enumext_before_args_exec:
1137 {
1138   \tl_use:c { l__enumext_before_starred_key_ \__enumext_level: _tl }
1139 }

```

The function `\__enumext_before_keys_exec:` executes the `{\code}` set by the `before` key “before” the `enumext` environment is started in *second argument* of the list. The `{\code}` is executed “knowing” all definition and values provides by `\keys: \list{\arg one}{\arg two}{\code}`

```

1140 \cs_new_protected:Nn \__enumext_before_keys_exec:
1141 {
1142   \tl_use:c { l__enumext_before_no_starred_key_ \__enumext_level: _tl }
1143 }

```

The function `\__enumext_after_stop_list:` executes the `{\code}` set by the `after` key “after” the `enumext` environment has finished: `\endlist{\code}`.

```

1144 \cs_new_protected:Nn \__enumext_after_stop_list:
1145 {
1146   \tl_use:c { l__enumext_after_stop_list_ \__enumext_level: _tl }
1147 }

```

The function `\__enumext_after_args_exec:` executes the `{\code}` set by the `first` key after the end of the second argument of the list defining the `enumext` environment, just before the first occurrence of `\item: \list{\arg one}{\arg two}{\code}\item.`

```

1148 \cs_new_protected:Nn \__enumext_after_args_exec:
1149 {
1150   \tl_use:c { l__enumext_after_list_args_ \__enumext_level: _tl }
1151 }

```

(End of definition for `\__enumext_before_args_exec:` and others.)

### 13.21.2 Functions for before, after and first keys in keyans

Same implementation as the one used in the `enumext` environment.

```

\__enumext_before_args_exec_v:
\__enumext_before_keys_exec_v:
\__enumext_after_stop_list_v:
\__enumext_after_args_exec_v:
1152 \cs_new_protected:Nn \__enumext_before_args_exec_v:
1153 {
1154   \tl_use:N \l__enumext_before_starred_key_v_tl
1155 }
1156 \cs_new_protected:Nn \__enumext_before_keys_exec_v:
1157 {
1158   \tl_use:N \l__enumext_before_no_starred_key_v_tl
1159 }
1160 \cs_new_protected:Nn \__enumext_after_stop_list_v:
1161 {
1162   \tl_use:N \l__enumext_after_stop_list_v_tl
1163 }
1164 \cs_new_protected:Nn \__enumext_after_args_exec_v:
1165 {
1166   \tl_use:N \l__enumext_after_list_args_v_tl
1167 }

```

(End of definition for `\__enumext_before_args_exec_v:` and others.)

### 13.21.3 Functions for before, after and first keys in enumext\* and keyans\*

```
\__enumext_before_args_exec_vii:
\__enumext_before_keys_exec_vii
\__enumext_after_stop_list_vii:
\__enumext_after_args_exec_vii:
```

Same implementation as the one used in the [enumext](#) environment.

```
1168 \cs_new_protected:Nn \__enumext_before_args_exec_vii:
1169 {
1170   \tl_use:N \l__enumext_before_starred_key_vii_tl
1171 }
1172 \cs_new_protected:Nn \__enumext_before_args_exec_viii:
1173 {
1174   \tl_use:N \l__enumext_before_starred_key_viii_tl
1175 }
1176 \cs_new_protected:Nn \__enumext_before_keys_exec_vii:
1177 {
1178   \tl_use:N \l__enumext_before_no_starred_key_vii_tl
1179 }
1180 \cs_new_protected:Nn \__enumext_before_keys_exec_viii:
1181 {
1182   \tl_use:N \l__enumext_before_no_starred_key_viii_tl
1183 }
1184 \cs_new_protected:Nn \__enumext_after_stop_list_vii:
1185 {
1186   \tl_use:N \l__enumext_after_stop_list_vii_tl
1187 }
1188 \cs_new_protected:Nn \__enumext_after_stop_list_viii:
1189 {
1190   \tl_use:N \l__enumext_after_stop_list_viii_tl
1191 }
1192 \cs_new_protected:Nn \__enumext_after_args_exec_vii:
1193 {
1194   \tl_use:N \l__enumext_after_list_args_vii_tl
1195 }
1196 \cs_new_protected:Nn \__enumext_after_args_exec_viii:
1197 {
1198   \tl_use:N \l__enumext_after_list_args_viii_tl
1199 }
```

(End of definition for \\_\_enumext\_before\_args\_exec\_vii: and others.)

### 13.22 Setting keys for multicol and minipage

```
mini-env
mini-sep
columns-sep
columns
```

The default value of the `columns-sep` key is handled by the state of the boolean variable `\l__enumext_columns_sep_X_bool` which is handled in the internal definition of the [enumext](#) and [keyans](#) environments. Define and set `mini-env`, `mini-sep`, `columns-sep` and `columns` keys for [enumext](#), [enumext\\*](#), [keyans](#) and [keyans\\*](#) environments.

```
1200 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1201 {
1202   \keys_define:nn { enumext / #1 }
1203   {
1204     mini-env .dim_set:c = { l__enumext_minipage_right_#2_dim },
1205     mini-env .value_required:n = true,
1206     mini-sep .dim_set:c = { l__enumext_minipage_hsep_#2_dim },
1207     mini-sep .initial:n = 0.3333em,
1208     mini-sep .value_required:n = true,
1209     columns-sep .dim_set:c = { l__enumext_columns_sep_#2_dim },
1210     columns-sep .value_required:n = true,
1211     columns .int_set:c = { l__enumext_columns_#2_int },
1212     columns .initial:n = 1,
1213     columns .value_required:n = true,
1214   }
1215 }
1216 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }
```

For [enumext\\*](#) and [keyans\\*](#) environments the situation is a bit different, the command `\miniright` is not available, so we will add the keys `mini-right` and `mini-right*` to implement support for [minipage](#) environment.

```
1217 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1218 {
1219   \keys_define:nn { enumext / #1 }
1220   {
1221     mini-right .tl_gset:c = { g__enumext_miniright_code_#2_tl },
1222     mini-right .value_required:n = true,
1223     mini-right* .code:n = {
```

```

1224         \bool_gset_true:c { g__enumext_minipage_center_#2_bool }
1225         \keys_set:nn { enumext / #1 } { mini-right = {##1} }
1226     },
1227     mini-right* .value_required:n = true,
1228 }
1229 }
1230 \clist_map_inline:nn { {enumext*}{vii}, {keyans*}{viii} } { \__enumext_tmp:nn #1 }

```

(End of definition for `mini-env` and others.)

### 13.23 Adjustment of vertical spaces for multicols

When nesting a “list environment” inside the `multicols` environment, the values of the “vertical spaces” are lost, basically the `multicols` environment takes control over them. Graphically, this can be seen in figure 7.

Figure 7: Representation of the vertical space in `multicols` for a nested level.

To keep the desired spaces *above* and *below* in the “list environment” (`\topsep` + `[\partopsep]`) it is necessary to “adjust” the spaces added by the `multicols` environment. The most appropriate option in this case is to use a “context sensitive” vertical space with `\addvspace`.

❗ I should make it clear that the implementation here is a “bit questionable”. At first glance doing `\multicolsep=\topsep` seemed right, but the results were not always as expected. An almost *imperceptible* detail is that in some cases the `\itemsep` values of are “stretched”, possibly due to the use of `\raggedcolumns` and this affects the lower space when closing the environment, which is “smaller” than expected. My attempts to find the correct values using `\showoutput` and `\showboxdepth` absolutely failed.

#### 13.23.1 Adjustment of vertical spaces for multicols in enumext

`\__enumext_multi_set_vskip:` The function `\__enumext_multi_set_vskip:` will take care of determining the “adjusted spaces” that we will apply “above” and “below” the `multicols` environment in `enumext`.

We will set the default values taking into account that  $\TeX$  is in *horizontal mode*, then we will make the settings for the *vertical mode* in which `\partopsep` comes into play.

Set the values of `\l__enumext_multicols_above_X_skip` and `\l__enumext_multicols_below_X_skip` equal to the value of `\topsep` in the *current level*.

```

1231 \cs_new_protected:Nn \__enumext_multi_set_vskip:
1232 {
1233     \skip_set:cn { l__enumext_multicols_above_ \__enumext_level: _skip }
1234     {
1235         \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
1236     }
1237     \skip_set:cn { l__enumext_multicols_below_ \__enumext_level: _skip }
1238     {
1239         \skip_use:c { l__enumext_topsep_ \__enumext_level: _skip }
1240     }
1241     \__enumext_add_pre_parsep:
1242 }

```

(End of definition for `\__enumext_multi_set_vskip:`.)

`\__enumext_add_pre_parsep:` The function `\__enumext_add_pre_parsep:` “adjusted” the value of `\l__enumext_multicols_above_X_skip` detecting the value of `\parsep` from the previous level. This is necessary since `\parsep` from the previous level affects the *vertical spaces*.

```

1243 \cs_new_protected:Nn \__enumext_add_pre_parsep:
1244 {
1245     \int_case:nn { \l__enumext_level_int }
1246     {
1247         { 2 }{
1248             \skip_if_eq:nnF { \l__enumext_parsep_i_skip } { \c_zero_skip }
1249             {
1250                 \skip_add:Nn \l__enumext_multicols_above_ii_skip
1251                 {
1252                     \l__enumext_parsep_i_skip
1253                 }
1254             }
1255         }
1256         { 3 }{

```

```

1257         \skip_if_eq:nnF { \l__enumext_parsep_ii_skip } { \c_zero_skip }
1258         {
1259             \skip_add:Nn \l__enumext_multicols_above_iii_skip
1260             {
1261                 \l__enumext_parsep_ii_skip
1262             }
1263         }
1264     }
1265 { 4 }{
1266     \skip_if_eq:nnF { \l__enumext_parsep_iii_skip } { \c_zero_skip }
1267     {
1268         \skip_add:Nn \l__enumext_multicols_above_iv_skip
1269         {
1270             \l__enumext_parsep_iii_skip
1271         }
1272     }
1273 }
1274 }
1275 }

```

(End of definition for `\__enumext_add_pre_parsep:`)

`\__enumext_multi_addvspace:` The function `\__enumext_multi_addvspace:` will apply the spaces set using `\addvspace` “above” the `multicols` environment in `enumext`, taking into account whether  $\text{\TeX}$  is in  $\langle horizontal\ mode \rangle$  or  $\langle vertical\ mode \rangle$ .

```

### 13.24 Adjustment of vertical spaces for minipage

When nesting a “list environment” within the `minipage` environment, the values of the “vertical spaces” are lost. Graphically it can be seen like in the figure 8.

Figure 8: Representation of the `minipage` spacing adjustment for a nested level.

Since we want to keep the “left” and “right” environments “aligned on top”, preserving the `\baselineskip` and keep the desired “spaces” (`\topsep` + `[\partopsep]`) it is necessary to “adjust” the “vertical spaces” for `minipage` environments.

Here there are several complications that we must circumvent, the `minipage` environment eliminates the “top” spaces, the `multicols` environment can be nested in the `minipage` environment, the “top” and “bottom” spaces are affected when `topsep=0pt` and to this is added the `\partopsep` parameter that comes into action according to whether  $\TeX$  is in *horizontal mode* or *vertical mode*. Depending on these cases, small adjustments must be made using `\vspace` and `\addvspace` to obtain the “desired vertical spacing”.

- Again I must make clear that the implementation here is a “bit questionable”, but hunting the spaces (glue) produced by the `minipage` environment is quite complicated, even more if `multicols` is nested. The setting of the values was more “trial and error” (approx to `\strutbox`), using the help of the `lua-visual-debug`[15] package, again my attempts to find the correct values using `\showoutput` and `\showboxdepth` absolutely failed.

#### 13.24.1 Adjustment of vertical spaces for minipage in enumext

```

\__enumext_minipage_set_skip:
\__enumext_minipage_add_space:

```

The function `\__enumext_minipage_set_skip:` will take care of determining the “adjust” spaces that we will apply “above” and “below” the `\__enumext_mini_page` environment in `enumext`.

First we will set the value of `\l__enumext_minipage_right_skip` equal to `\topsep`, then we will see if  $\TeX$  is in *vertical mode* and we will add `\partopsep`, followed by that we set the value of `\l__enumext_minipage_after_skip`.

```

1321 \cs_new_protected:Nn \__enumext_minipage_set_skip:
1322 {
1323     \skip_set:Nn \l__enumext_minipage_right_skip
1324     {
1325         \skip_use:c { \l__enumext_topsep_ \__enumext_level: _skip }
1326     }
1327     \mode_if_vertical:T
1328     {
1329         \skip_add:Nn \l__enumext_minipage_right_skip
1330         {
1331             \skip_use:c { \l__enumext_partopsep_ \__enumext_level: _skip }
1332         }
1333     }
1334     \skip_set_eq:NN \l__enumext_minipage_after_skip \l__enumext_minipage_right_skip

```

We will adjust the values `\l__enumext_multicols_above_X_skip` and `\l__enumext_multicols_below_X_skip` and call the function `\__enumext_pre_itemsep_skip:`.

```

1335     \skip_set_eq:cN
1336     { \l__enumext_multicols_above_ \__enumext_level: _skip } \l__enumext_minipage_right_skip
1337     \skip_set_eq:cN
1338     { \l__enumext_multicols_below_ \__enumext_level: _skip } \l__enumext_minipage_right_skip
1339     \__enumext_pre_itemsep_skip:

```

If the environment `multicols` is active, we set `\topskip=0pt` and then we make `\multicolsep` have the same value as `\l__enumext_multicols_above_X_skip`.

```

1340     \int_compare:nNnT
1341     { \int_use:c { \l__enumext_columns_ \__enumext_level: _int } } > { 1 }
1342     {
1343         \skip_zero:N \topskip
1344         \skip_set_eq:Nc \multicolsep { \l__enumext_multicols_above_ \__enumext_level: _skip }

```

```

1345     }
1346 }

```

The function `\__enumext_minipage_add_space:` will apply the spaces on the “*left side*” using `\addvspace` “*above*” the `\__enumext_minipage` environment, taking into account whether  $\TeX$  is in  $\langle horizontal mode \rangle$  or  $\langle vertical mode \rangle$ . Here we use the plain  $\TeX$  macro `\nointerlineskip` to prevent baseline “*glue*” being added between the next pair of boxes in a *vertical list*. For the latter we will make some adjustments since the `\partopsep` parameter comes into play and this affects the *vertical spacing*.

```

1347 \cs_new_protected:Nn \__enumext_minipage_add_space:
1348 {
1349   \__enumext_minipage_set_skip:
1350   \__enumext_unskip_unkern:

`\__enumext_mini_addvspace_vii:`  
`\__enumext_mini_addvspace_viii:`

The functions `\__enumext_mini_addvspace_vii:` and `\__enumext_mini_addvspace_viii:` will apply the vertical space “only above” the `\__enumext_mini_page` environment on the *left side* when the `mini-right` key is active in the `enumext*` and `keyans*` environments.

Here we will NOT take into account whether  $\text{\TeX}$  is in  $\langle\text{horizontal mode}\rangle$  or  $\langle\text{vertical mode}\rangle$ , since `\partopsep` is equal to `0pt` in both environments.

```

1629 \cs_new_protected:Nn \__enumext_mini_addvspace_vii:
1630 {
1631     \__enumext_mini_set_vskip_vii:
1632     \par\nopagebreak

1638     \par\nopagebreak
1639     \addvspace { \l__enumext_minipage_left_skip }
1640 }

```

(End of definition for `\__enumext_mini_addvspace_vii:` and `\__enumext_mini_addvspace_viii:`)

### 13.24.4 The command `\miniright`

The command `\miniright` will close the `\__enumext_mini_page` environment on the “left side”, open the `\__enumext_mini_page` environment on the “right side” adding the *adjusted vertical space*. By default we will add `\centering` when starting the “right side” environment. The *starred argument* ‘`*`’ inhibits the use of `\centering` command i.e. the usual  $\text{\TeX}$  justification is maintained in the `\__enumext_mini_page` on the “right side”.

`\miniright`

First we will perform some checks to prevent the command from being executed outside the `enumext` environment or somewhere inappropriate then we will call the internal functions to execute it in the `enumext` and `keyans` environments.

```

1641 \NewDocumentCommand \miniright { s }
1642 {
1643     \int_compare:nNt { \l__enumext_keyans_pic_level_int } = { 1 }
1644     {
1645         \msg_error:nnn { enumext } { wrong-miniright-place }
1646     }
1647     % outside
1648     \bool_lazy_and:nnT
1649     { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
1650     { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }

```

```

1651     {
1652       \msg_error:nnn { enumext } { wrong-miniright-place }
1653     }
1654   % starred env
1655   \bool_lazy_and:nnT
1656   { \bool_if_p:N \g__enumext_starred_bool }
1657   { \bool_not_p:n { \l__enumext_standar_bool } }
1658   {
1659     \msg_error:nnn { enumext } { wrong-miniright-starred }
1660   }
1661   % exec
1662   \int_compare:nNnTF { \l__enumext_keyans_level_int } = { 1 }
1663   {
1664     \__enumext_keyans_mini_right_cmd:n {#1}
1665   }
1666   { \__enumext_mini_right_cmd:n {#1} }
1667 }

```

(End of definition for `\miniright`. This function is documented on page 12.)

`\__enumext_mini_right_cmd:n`

The function `\__enumext_mini_right_cmd:n` takes as argument the *starred* ‘`*`’ of the `\miniright` command in the `enumext` environment. We check if the `mini-env` key is active via the variable `\l__enumext_minipage_right_X_dim`, if so we close the `multicols` environment with the `\__enumext_mini_page` environment on the “left side”, then we open the `\__enumext_mini_page` environment on the “right side”, apply our adjusted “vertical spaces”, followed by adding the `\centering` command when the *starred argument* ‘`*`’ is not present and set zero `\g__enumext_minipage_stat_int`, otherwise we return an error.

```

1668 \cs_new_protected:Npn \__enumext_mini_right_cmd:n #1
1669 {
1670   \dim_compare:nNnTF

1722 }
1723 }

```

(End of definition for \\_\_enumext\_keyans\_mini\_right\_cmd:n.)

### 13.25 Setting above and below keys

While having controlled the *vertical spaces* within the `enumext` and `keyans` environments when using the `columns` or `mini-env` keys, sometimes the “vertical spaces above” or “vertical spaces below” the environments are not as expected and it is necessary to be able to apply a “fine correction” to these. As I have not been able to correct these *glitches*, the best option is to leave a couple of *keys* dedicated to this purpose, in this case it is best to use `\vspace` or `\vspace*` when convenient.

Define `above`, `above*`, `below` and `below*` keys for `enumext` and `keyans` environments.

```

1724 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
1725 {
1726     \keys_define:nn { enumext / #1 }
1727     {
1728         above .skip_set:c = { \__enumext_vspace_above_#2_skip },
1729         above .value_required:n = true,
1730         above* .code:n      = \bool_set_true:c { \__enumext_vspace_a_star_#2_bool }
1731                             \keys_set:nn { enumext / #1 } { above = {##1} },
1732         above* .value_required:n = true,
1733         below .skip_set:c = { \__enumext_vspace_below_#2_skip },
1734         below .value_required:n = true,
1735         below* .code:n      = \bool_set_true:c { \__enumext_vspace_b_star_#2_bool }
1736                             \keys_set:nn { enumext / #1 } { below = {##1} },
1737         below* .value_required:n = true,
1738     }
1739 }
1740 \clist_map_inline:Nn \c__enumext_all_envs_clist { \__enumext_tmp:nn #1 }

```

(End of definition for `above` and others.)

#### 13.25.1 Functions for above and below keys in enumext

`\__enumext_vspace_above:` The function `\__enumext_vspace_above:` apply the *vertical space above* the `enumext` environment set by the `above*` and `above` keys.

```

1741 \cs_new_protected:Nn \__enumext_vspace_above:
1742 {
1743     \skip_if_eq:nnF
1744     { \skip_use:c { \__enumext_vspace_above_ \__enumext_level: _skip } } { \c_zero_skip }
1745     {
1746         \bool_if:cTF { \__enumext_vspace_a_star_ \__enumext_level: _bool }
1747         {
1748             \vspace*{ \skip_use:c { \__enumext_vspace_above_ \__enumext_level: _skip } }
1749         }
1750         {
1751             \vspace { \skip_use:c { \__enumext_vspace_above_ \__enumext_level: _skip } }
1752         }
1753     }
1754 }

```

(End of definition for `\__enumext_vspace_above:`.)

`\__enumext_vspace_below:` The function `\__enumext_vspace_below:` apply the *vertical space below* the `enumext` environment set by the *below\** and *below* keys.

```

1755 \cs_new_protected:Nn \__enumext_vspace_below:
1756 {
1757   \skip_if_eq:nnF
1758   { \skip_use:c { \l__enumext_vspace_below_ \__enumext_level: _skip } } { \c_zero_skip }
1759   {
1760     \bool_if:cTF { \l__enumext_vspace_b_star_ \__enumext_level: _bool }
1761     {
1762       \vspace*{ \skip_use:c { \l__enumext_vspace_below_ \__enumext_level: _skip } }
1763     }
1764     {
1765       \vspace { \skip_use:c { \l__enumext_vspace_below_ \__enumext_level: _skip } }
1766     }
1767   }
1768 }

```

(End of definition for `\__enumext_vspace_below:`.)

### 13.25.2 Functions for above and below keys in keyans

`\__enumext_vspace_above_v:` The function `\__enumext_vspace_above_v:` apply the *vertical space above* the `keyans` environment set by the *above* and *above\** keys.

```

1769 \cs_new_protected:Nn \__enumext_vspace_above_v:
1770 {
1771   \skip_if_eq:nnF { \l__enumext_vspace_above_v_skip } { \c_zero_skip }
1772   {

### 13.26 Setting series, resume and resume\* keys

The `series` key is responsible for the whole process of the `resume` and `resume*` keys. The idea behind this is to be able to absorb the *⟨keys⟩* passed to the *optional argument* of the environments `enumext` and `enumext*`, but, discarding some specific *⟨keys⟩*.

We define the keys `series`, `resume` and `resume*` for the “all levels” of `enumext` and `enumext*`. Here we do not need to make sure that `\printkeyans` is not running otherwise the *start value* of the environments would be increased when using `resume` or `resume*` keys.

In version 1.6 it is allowed to pass the key `resume without value` by means of the command `\setenumext`, for the correct operation of this we must set the boolean variable `\l__enumext_resume_count_bool` set by the key `resume without value` to “true” to be later processed by the function `\l__enumext_parse_series:n` in the definition of the environments `enumext` and `enumext*`.

```

1835 \cs_set_protected:Npn \l__enumext_tmp:n #1 #2

### 13.26.1 Internal function to save counter and integer values

The `\__enumext_standar_save_counter:` and `\__enumext_starred_save_counter:` functions will save the last counter value to `\g__enumext_series_⟨series name⟩_int` if the `series={⟨series name⟩}` key has been passed, to `\c@__enumext_resume_X_int` if it has passed the key `resume without value` and the key `series` is not active, in `\g__enumext_series_⟨series name⟩_X_int` if the key `resume={⟨series name⟩}` has been passed and in `\g__enumext_series_⟨store name⟩_X_int` if the key has been passed `save-ans={⟨store name⟩}`.

🔗 The variables `\l__enumext_series_name_str` and `\l__enumext_series_name_tl` contain the same `{⟨series name⟩}` but are executed at different moments, the integer variable with `\l__enumext_series_name_str` sets the value when execute `series={⟨series name⟩}` and the integer variable with `\l__enumext_series_name_tl` sets the subsequent values when use `resume={⟨series name⟩}`. This function is passed to the `enumext` environment definition (§13.42) and the `enumext*` environment definition (§13.47).

### 13.26.2 Internal function for resume counters

\\_\_enumext\_resume\_counter:

The \\_\_enumext\_resume\_counter: function is executed by the `resume*` key and `resume` key *without value*, only the “counters” for the “levels” of the environments in which it is executed will be set. If the `save-ans` key is active it will set the “counter” according to the value of the integer variable created by that key.

```

1962 \cs_new_protected:Nn \__enumext_resume_counter:

### 13.26.3 Internal functions for series key

```

\__enumext_filter_series:n
  \__enumext_filter_series_key:n
  \__enumext_filter_series_pair:nn

```

The function `\__enumext_filter_series:n` will be in charge of filtering the *⟨keys⟩* we want to store where *#1* represents the *optional argument* passed to the environment. This implementation is adapted directly from the code provided by Jonathan P. Spratte (@Skillmon) in [chat-Tex-SX](#)

```

2011 \cs_new:Npn \__enumext_filter_series:n #1
2012 {
2013     \use:e
2014     {
2015         \keyval_parse:NNn
2016         \__enumext_filter_series_key:n
2017         \__enumext_filter_series_pair:nn {#1}
2018     }
2019 }

```

The function `\__enumext_filter_series_key:n` will be responsible for filtering the *⟨keys⟩* that are passed “without value” by excluding the `resume`, `resume*`, `reset`, `reset*` and `base-fix` keys.

```

2020 \cs_new:Npn \__enumext_filter_series_key:n #1
2021 {
2022     \str_case:nnF {#1}
2023     {
2024         { resume } {} { resume* } {} { reset } {} { reset* } {} { base-fix } {}
2025     }
2026     { , { \exp_not:n {#1} } }
2027 }

```

The function `\__enumext_filter_series_pair:nn` will be responsible for filtering the *⟨keys⟩* that are passed “with value” by excluding the `series`, `resume`, `start`, `start*`, `save-ans` and `save-key` keys.

```

2028 \cs_new:Npn \__enumext_filter_series_pair:nn #1#2
2029 {
2030     \str_case:nnF {#1}
2031     {
2032         { series } {} { resume } {} { start } {}
2033         { start* } {} { save-ans } {} { save-key } {}

```

```

2034     }
2035     { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
2036 }

```

(End of definition for `\__enumext_filter_series:n`, `\__enumext_filter_series_key:n`, and `\__enumext_filter_series_pair:nn`.)

`\__enumext_save_last_keys:n` The function `\__enumext_save_last_keys:n` will be in charge of saving the filtering (*keys*) when the keys `series={⟨series name⟩}` or `resume={⟨series name⟩}` or `resume*` are NOT active and will save them in the variable `\g__enumext_resume_last_keys_X_tl` for the `enumext` environment and in the variable `\g__enumext_resume_last_keys_vii_tl` for the `enumext*` environment.

- The boolean variable `\__enumext_resume_series_X_bool` is set to “true” by the key `resume={⟨series name⟩}`, the boolean variable `\__enumext_resume_star_key_X_bool` is set to “true” by the key `resume*`, in this case we need to make sure both variables are set to “false” so that they don’t override the default filtered (*keys*).

```

2037 \cs_new_protected:Npn \__enumext_save_last_keys:n #1
2038 {
2039   \int_compare:nNtT { \__enumext_level_int } > { 0 }
2040   {
2041     \bool_if:cF { \__enumext_resume_series_ \__enumext_level: _bool }
2042     {
2043       \bool_if:cF { \__enumext_resume_star_key_ \__enumext_level: _bool }
2044       {
2045         \tl_gclear:c { g__enumext_resume_last_keys_ \__enumext_level: _tl }
2046         \tl_gset:ce
2047           { g__enumext_resume_last_keys_ \__enumext_level: _tl }
2048           { \__enumext_filter_series:n {#1} }
2049       }
2050     }
2051   }
2052   \int_compare:nNtT { \__enumext_level_h_int } = { 1 }
2053   {
2054     \bool_if:NF \__enumext_resume_series_vii_bool
2055     {
2056       \tl_gclear:N \g__enumext_resume_last_keys_vii_tl
2057       \tl_gset:Ne \g__enumext_resume_last_keys_vii_tl { \__enumext_filter_series:n {#1} }
2058     }
2059   }
2060 }

```

The `\__enumext_resume_last_counter:` function will be in charge of setting the “counters” when the keys `series={⟨series name⟩}` or `resume={⟨series name⟩}` are NOT active and the `resume` key is being used *without value* either in the *optional argument* of the environments or through the `\setenumext` command.

- The boolean variable `\__enumext_resume_count_bool` is set to “true” by the keys `resume without value` and `resume*`, and set to “false” by the keys `start` and `start*` (§13.15).

```

2061 \cs_new_protected:Nn \__enumext_resume_last_counter:
2062 {
2063   \bool_lazy_and:nnT
2064     { \bool_if_p:N \__enumext_resume_count_bool }
2065     { \tl_if_empty_p:N \__enumext_series_name_tl }
2066   {
2067     \__enumext_resume_counter:
2068   }
2069 }

```

(End of definition for `\__enumext_save_last_keys:n` and `\__enumext_resume_last_counter:`.)

`\__enumext_parse_series:n` The `\__enumext_parse_series:n` function handled by the `series` key will be responsible for *storing* the *filtered* (*keys*) from the *optional arguments* of the `enumext` and `enumext*` environments for the `resume` and `resume*` keys. If the `series` key is NOT active it will call the `\__enumext_save_last_keys:n` function to *store* the *filtered* (*keys*) that will be used by the `resume*` key and then the `\__enumext_resume_last_counter:` function used by the `resume` key *without value* if it is active, otherwise *store* the *filtered* (*keys*) in the global variable `\g__enumext_series_⟨series name⟩_X_tl` along with the creation of the integer variable `\g__enumext_series_⟨series name⟩_X_int` used by the `resume` key *with value*.

- This function is passed to the function `\__enumext_parse_keys:n` in the `enumext` environment definition (§13.42) and to the function `\__enumext_parse_keys_vii:n` in the `enumext*` environment definition (§13.47).

### 13.26.4 Internal functions for resume key with value

\\_\_enumext\_resume:n

The function \\_\_enumext\_resume:n will handle the *argument*  $\langle series\ name \rangle$  passed to the `resume` key in `enumext` and `enumext*` environments. First we will check if the global variable `\g__enumext_series_<series name>_X_tl` exists, if so we will call the function `\__enumext_resume_series:n` and pass the  $\langle keys \rangle$  stored in `\g__enumext_series_<series name>_X_tl` to the environments, otherwise we will return an error.

```

2228         {
2229             \__enumext_resume_counter:
2230             \keys_set:nV { enumext / enumext* } \g__enumext_resume_last_keys_vii_tl
2231         }
2232     }
2233 }

```

(End of definition for `\__enumext_resume_star:.`)

### 13.27 The `\resetenumext` command

Sometimes it is necessary to be able to reset the “counters” of the environments according to some value, for example `\chapter`. Since we use “internal counters” for the `resume` and `resume*` keys which set the *start value*, but are not accessible by the user, it is to provide a public command for this. This implementation is an adaptation of the answers given by Clea F. Rees (@cfr) and Jonathan P. Spratte (@Skillmon) in [Correct implementation of optional argument \(comma-separated\) in expl3](#).

`\resetenumext`

The `\resetenumext` command “resets” the *start value* of the “counters” for the `enumext` and `enumext*` environments along with the “internal counters” used by the keys `resume without value` and `resume*` according to the value of `{<some counter>}`.

```

2234 \NewDocumentCommand \resetenumext { s o m }
2235 {
2236     \bool_if:nTF {#1}
2237     {
2238         \__enumext_reset_count_resume_all:n {#3}
2239     }
2240     {
2241         \tl_if_novalue:nTF {#2}
2242         {
2243             \__enumext_reset_count_resume_levels:n {#3}
2244         }
2245         {

```

```

2246         \str_if_eq:nnTF {#2} { * }
2247         { \__enumext_starred_reset:n {#3} }
2248         {
2249             \bool_lazy_and:nnTF
2250             { \int_compare_p:nNn {#2} > 0 }

2284     {
2285         \__enumext_reset_count_resume:nn { ##1 } { #1 }
2286     }
2287 }

```

(End of definition for `\resetenumext` and others. This function is documented on page 11.)

### 13.28 The reset and reset\* keys

The `\resetenumext` command does not work, for example, after an unnumbered chapter, so it is preferable to provide a pair of *keys* that adjust the internal variables if necessary.

```

reset We define the keys reset and reset* for the “all levels” of enumext and enumext*.
reset*
2288 \cs_set_protected:Npn \__enumext_tmp:n #1
2289 {
2290     \keys_define:nn { enumext / #1 }
2291     {
2292         reset .code:n = \__enumext_standard_reset_key:,
2293         reset .value_forbidden:n = true,
2294         reset* .code:n = \__enumext_standard_reset_key_star:,
2295         reset* .value_forbidden:n = true,
2296     }
2297 }
2298 \clist_map_inline:nn {level-1, level-2, level-3, level-4} { \__enumext_tmp:n {#1} }
2299 \keys_define:nn { enumext / enumext* }
2300 {
2301     reset .code:n = \__enumext_starred_reset_key:,
2302     reset .value_forbidden:n = true,
2303     reset* .code:n = \__enumext_starred_reset_key:,
2304     reset* .value_forbidden:n = true,
2305 }

```

(End of definition for `reset` and `reset*`.)

### 13.28.1 Internal functions for reset and reset\* keys

The function `\__enumext_standard_reset_key:` will be handled by the `reset` key and will “reset” the counter `\c@__enumext_resume_X_int` to “zero” according to the *level* at which it is executed within the `enumext` environment.

```

2306 \cs_new_protected:Nn \__enumext_standard_reset_key:
2307 {
2308   \int_compare:nNtT { \__enumext_level_int } > { 0 }
2309   {
2310     \int_if_exist:cT { c@__enumext_resume_ \int_to_roman:n { \__enumext_level_int } _int }
2311     {
2312       \int_gzero:c { c@__enumext_resume_ \int_to_roman:n { \__enumext_level_int } _int }
2313     }
2314   }
2315 }

```

The function `\__enumext_standard_reset_key_star:` will be handled by the `reset*` key and will “reset” the counters `\c@__enumext_resume_X_int` to “zero” from the *level* at which it is executed within the `enumext` environment to the *lower levels*.

```

2316 \cs_new_protected:Nn \__enumext_standard_reset_key_star:
2317 {
2318   \cs_set:Npn \__enumext_tmp:n ##1
2319   {
2320     \int_if_exist:cT { c@__enumext_resume_ \int_to_roman:n {##1} _int }
2321     {
2322       \int_gzero:c { c@__enumext_resume_ \int_to_roman:n {##1} _int }
2323     }
2324   }
2325   \int_compare:nNtT { \__enumext_level_int } > { 0 }
2326   {
2327     \int_step_function:nnN { \__enumext_level_int } { 4 } \__enumext_tmp:n
2328   }
2329 }

```

The function `\__enumext_starred_reset_key:` will be handled by `reset` keys and `reset*` will “reset” the counter `\c@__enumext_resume_vii_int` to “zero” when executed in the `enumext*` environment.

```

2330 \cs_new_protected:Nn \__enumext_starred_reset_key:
2331 {
2332   \int_gzero:c { c@__enumext_resume_vii_int }
2333 }

```

(End of definition for `\__enumext_standard_reset_key:`, `\__enumext_standard_reset_key_star:`, and `\__enumext_starred_reset_key:`.)

## 13.29 Setting save-ans, check-ans and no-store keys

The key `save-ans` is directly associated with the keys `check-ans`, `no-store`, `resume` and `resume*`, this will activate the entire “storage system” in the `enumext` package.

### 13.29.1 Setting save-ans key

`save-ans` We define the keys `save-ans` only for the “first level” of `enumext` and `enumext*`.

```

2334 \cs_set_protected:Npn \__enumext_tmp:n #1
2335 {
2336   \keys_define:nn { enumext / #1 }
2337   {
2338     save-ans .code:n = \__enumext_storing_set:n {##1},
2339     save-ans .value_required:n = true,
2340   }
2341 }
2342 \clist_map_inline:nn { level-1, enumext* } { \__enumext_tmp:n {##1} }

```

(End of definition for `save-ans`.)

### 13.29.2 Internal functions for save-ans key

The functions `\__enumext_start_save_ans_msg:` and `\__enumext_stop_save_ans_msg:` will display in the terminal and .log file the environment in which the `save-ans` key was executed along with the line at the beginning and end of it. The function `\__enumext_start_save_ans_msg:` will be passed to `\__enumext_storing_set:n` and the function `\__enumext_stop_save_ans_msg:` will be passed to the function `\__enumext_execute_after_env:`.

```

2343 \cs_new_protected:Nn \__enumext_start_save_ans_msg:
2344 {
2345   \msg_term:nnVV { enumext } { save-ans-log }

```

```

2346     \g__enumext_envir_name_tl \l__enumext_store_name_tl
2347   }
2348   \cs_new_protected:Nn \__enumext_stop_save_ans_msg:
2349   {
2350     \msg_term:nnVV { enumext } { save-ans-log-hook }
2351     \g__enumext_envir_name_tl \g__enumext_store_name_tl
2352   }

```

(End of definition for \\_\_enumext\_start\_save\_ans\_msg: and \\_\_enumext\_stop\_save\_ans\_msg:.)

\\_\_enumext\_storing\_set:n  
 \\_\_enumext\_storing\_exec:

The function \\_\_enumext\_storing\_set:n first pass the value of the `save-ans` key to the variable \l\_\_enumext\_store\_name\_tl which will contain the {<store name>} of the *sequence* and *prop list* we will use. If \l\_\_enumext\_store\_name\_tl is *empty* we return an error message, otherwise will return the appropriate message \\_\_enumext\_start\_save\_ans\_msg: and proceed to execute the function \\_\_enumext\_storing\_exec: for `enumext` and `enumext*` environments.

```

2353   \cs_new_protected:Npn \__enumext_storing_set:n #1
2354   {
2355     \tl_set:Nx \l__enumext_store_name_tl {#1}
2356     \tl_if_empty:NTF \l__enumext_store_name_tl
2357     {
2358       \bool_lazy_or:nnT
2359       { \l__enumext_standar_first_bool } { \l__enumext_starred_first_bool }
2360       {
2361         \msg_error:nnV { enumext } { save-ans-empty } \g__enumext_envir_name_tl
2362       }
2363     }
2364     {
2365       \bool_lazy_or:nnT
2366       { \l__enumext_standar_first_bool } { \l__enumext_starred_first_bool }
2367       {
2368         \__enumext_start_save_ans_msg:
2369         \__enumext_storing_exec:
2370       }
2371     }
2372   }

```

The function \\_\_enumext\_storing\_exec: will set to true the variable \l\_\_enumext\_store\_active\_bool which activates the use of the `\anskey` command and the `anskey*`, `keyans`, `keyans*` and `keyanspic` environments and will set to “true” the variable \l\_\_enumext\_check\_answers\_bool used for internal checking answers mechanism set by the `check-ans` and `no-store` keys, copy {<store name>} into the variable \g\_\_enumext\_store\_name\_tl.

```

2373   \cs_new_protected:Nn \__enumext_storing_exec:
2374   {
2375     \bool_set_true:N \l__enumext_store_active_bool
2376     \bool_set_true:N \l__enumext_check_answers_bool
2377     \tl_gset:NV \g__enumext_store_name_tl \l__enumext_store_name_tl

```

The *prop list* \g\_\_enumext\_series\_<store name>\_prop and the *sequence* \g\_\_enumext\_series\_<store name>\_seq will be created globally to “store content” in case they do not exist together with the integer variable \g\_\_enumext\_series\_<store name>\_int used by the keys `resume` and `resume*`.

```

2378     \prop_if_exist:cF { g__enumext_ \l__enumext_store_name_tl _prop }
2379     {
2380       \msg_log:nnV { enumext } { store-prop } \l__enumext_store_name_tl
2381       \prop_new:c { g__enumext_ \l__enumext_store_name_tl _prop }
2382     }
2383     \seq_if_exist:cF { g__enumext_ \l__enumext_store_name_tl _seq }
2384     {
2385       \msg_log:nnV { enumext } { store-seq } \l__enumext_store_name_tl
2386       \seq_new:c { g__enumext_ \l__enumext_store_name_tl _seq }
2387     }
2388     \int_if_exist:cF { g__enumext_resume_ \l__enumext_store_name_tl _int }
2389     {
2390       \msg_log:nnV { enumext } { store-int } \l__enumext_store_name_tl
2391       \int_new:c { g__enumext_resume_ \l__enumext_store_name_tl _int }
2392     }
2393   }

```

(End of definition for \\_\_enumext\_storing\_set:n and \\_\_enumext\_storing\_exec:.)

### 13.29.3 The check answer mechanism

The internal mechanism for “checking answers” follows this logic:

If the line begins with `\item` or `\item*` and does NOT *open a nested environment*, each `\item` or `\item*` must contain a *single* execution of the `\anskey` command, i.e. the counter of the executions of the `\anskey` command must be equal to the counter associated with the sum of executions of `\item` and `\item*`.

If the line begins with `\item` or `\item*` and *opens a nested environment* each `\item` or `\item*` in the nested environment must have a *single* execution of the `\anskey` command and the counter associated to the sum of `\item` and `\item*` executions must decrementing by “one” to maintain equality.

In order for the mechanism for the check-answer to work (not counting `keyans`, `keyans*` and `keyanspic`) we need:

1. We must keep track of the total number of `\item` and `\item*` (enumerated) that appear within the environment including the nested levels.
2. We must keep track of the total number of `\item` and `\item*` (enumerated) that appear per level of nesting.
3. Keeping track of the number of times the environment nests.

The integer variable associated to the sum of each `\item` and `\item*` in the environment `\g__enumext_item_number_int` must match the integer variable `\g__enumext_item_anskey_int` associated to the execution of the command `\anskey`. We analyze the cases:

- a) If the list only has one level the number of `\item` + `\item*` = `\anskey`
- b) If the list has *nested levels*, for each level of nesting we need to decrementing by one (for the `\item` or `\item*` that opens the nest) so that the account remains the same.

With `keyans`, `keyans*` and `keyanspic` it is enough to increase in one the integer of `\anskey`. The integers created must be global if they are not lost in the interior levels of nesting and to execute the test we will use a “hook” function after closing the *first level* of the environment.

### 13.29.4 Setting check-ans and no-store keys

Now we define the keys `check-ans` and `no-store` for all levels of `enumext` and `enumext*` environments.

```

check-ans 2394 \cs_set_protected:Npn \__enumext_tmp:n #1
no-store   2395 {
            2396   \keys_define:nn { enumext / #1 }
            2397   {
            2398     check-ans .bool_set:N = \__enumext_check_ans_key_bool,
            2399     check-ans .initial:n = false,
            2400     check-ans .value_required:n = true,
            2401     no-store .code:n = {
            2402               \bool_set_false:N \__enumext_check_answers_bool
            2403               \bool_set_false:N \__enumext_check_ans_key_bool
            2404             },
            2405     no-store .value_forbidden:n = true,
            2406   }
            2407 }
            2408 \clist_map_inline:nn
            2409 {
            2410   level-1, level-2, level-3, level-4, enumext*
            2411 }
            2412 { \__enumext_tmp:n {#1} }
```

(End of definition for `check-ans` and `no-store`.)

### 13.29.5 Set-up check answer mechanism

The function `\__enumext_check_ans_active:` will first check the state of the variable `\l__enumext_store_name_tl`, that is, the `save-ans` key is active, if so it will check the state of the variable `\l__enumext_check_answers_bool` handled by the key `no-store` and will execute the function `\__enumext_check_ans_level:` only if “true”, i.e. the key `no-store` is not active.

```

2413 \cs_new_protected:Nn \__enumext_check_ans_active:
2414 {
2415   \tl_if_empty:NF \l__enumext_store_name_tl
2416   {
2417     \bool_if:NT \l__enumext_check_answers_bool
2418     {
2419       \__enumext_check_ans_level:
2420     }
2421   }
2422 }
```

The function `\__enumext_check_ans_level:` will decrement by “one” the value of the variable `\g__enumext_item_number_int` which keeps track of the executions of `\item` and `\item*` for each level of nesting of the environment `enumext`, taking into account whether it is nested within `enumext*` or the opposite and set `\l__enumext_item_number_bool` to “false”.

```

2423 \cs_new_protected:Nn \__enumext_check_ans_level:
2424 {
2425   \int_case:nn { \l__enumext_level_int }
2426   {
2427     { 1 }{
2428       \bool_lazy_all:nT
2429       {
2430         { \bool_if_p:N \g__enumext_starred_bool }
2431         { \int_compare_p:nNn { \l__enumext_level_h_int } = { 1 } }
2432       }
2433       {
2434         \int_gdecr:N \g__enumext_item_number_int
2435         \bool_set_false:N \l__enumext_item_number_bool
2436       }
2437     }
2438     { 2 }{
2439       \int_gdecr:N \g__enumext_item_number_int
2440       \bool_set_false:N \l__enumext_item_number_bool
2441     }
2442     { 3 }{
2443       \int_gdecr:N \g__enumext_item_number_int
2444       \bool_set_false:N \l__enumext_item_number_bool
2445     }
2446     { 4 }{
2447       \int_gdecr:N \g__enumext_item_number_int
2448       \bool_set_false:N \l__enumext_item_number_bool
2449     }
2450   }

```

We should only execute this if `enumext*` is nested in the “first level” of `enumext`, for the rest of the cases the value of `\g__enumext_item_number_int` is already decreased.

```

2451   \int_case:nn { \l__enumext_level_h_int }
2452   {
2453     { 1 }{
2454       \bool_lazy_all:nT
2455       {
2456         { \bool_if_p:N \g__enumext_standar_bool }
2457         { \int_compare_p:nNn { \l__enumext_level_int } = { 1 } }
2458       }
2459       {
2460         \int_gdecr:N \g__enumext_item_number_int
2461         \bool_set_false:N \l__enumext_item_number_bool
2462       }
2463     }
2464   }
2465 }

```

(End of definition for `\__enumext_check_ans_active:` and `\__enumext_check_ans_level:`)

`\__enumext_check_ans_key_hook:`

The function `\__enumext_check_ans_key_hook:` will *export* the status of the local variable `\l__enumext_check_ans_key_bool` to the global variable `\g__enumext_check_ans_key_bool` only if the key `check-ans` is active.

```

2466 \cs_new_protected:Nn \__enumext_check_ans_key_hook:
2467 {
2468   \bool_lazy_and:nnT
2469   { \bool_if_p:N \l__enumext_check_ans_key_bool }
2470   { \bool_if_p:N \g__enumext_standar_bool }
2471   {
2472     \bool_gset_true:N \g__enumext_check_ans_key_bool
2473   }
2474   \bool_lazy_and:nnT
2475   { \bool_if_p:N \l__enumext_check_ans_key_bool }
2476   { \bool_if_p:N \g__enumext_starred_bool }
2477   {
2478     \bool_gset_true:N \g__enumext_check_ans_key_bool
2479   }
2480 }

```

(End of definition for `\__enumext_check_ans_key_hook:`.)

`\__enumext_item_answer_diff:` The function `\__enumext_item_answer_diff:` will set the value of the variable `\g__enumext_item_answer_diff_int` which is used by the functions `\__enumext_check_ans_show:` for the key `save-ans` and by the function `\__enumext_check_ans_log:` by the internal “*check answer*” mechanism. This function will be passed to the function `\__enumext_execute_after_env:`.

```
2481 \cs_new_protected:Nn \__enumext_item_answer_diff:
2482 {
2483   \int_gset:Nn \g__enumext_item_answer_diff_int
2484   {
2485     \int_sign:n { \g__enumext_item_number_int - \g__enumext_item_anskey_int }
2486   }
2487 }
```

(End of definition for `\__enumext_item_answer_diff:`.)

`\__enumext_check_ans_show:` The function `\__enumext_check_ans_show:` will be executed within the function `\__enumext_execute_after_env:` when the key `check-ans` is active, that is, when `\g__enumext_check_ans_key_bool` is “*true*” and will return the appropriate message according to the value of `\g__enumext_item_answer_diff_int` set by the function `\__enumext_item_answer_diff:`.

```
2488 \cs_new_protected:Nn \__enumext_check_ans_show:
2489 {
2490   \int_case:nn { \g__enumext_item_answer_diff_int }
2491   {
2492     { -1 } { \__enumext_check_ans_msg_less: }
2493     { 0 } { \__enumext_check_ans_msg_same_ok: }
2494     { 1 } { \__enumext_check_ans_msg_greater: }
2495   }
2496 }
2497 \cs_new_protected:Nn \__enumext_check_ans_msg_less:
2498 {
2499   \msg_warning:nnee { enumext } { item-less-answer } { \g__enumext_store_name_tl }
2500   { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2501 }
2502 \cs_new_protected:Nn \__enumext_check_ans_msg_same_ok:
2503 {
2504   \msg_term:nnee { enumext } { items-same-answer } { \g__enumext_store_name_tl }
2505   { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2506 }
2507 \cs_new_protected:Nn \__enumext_check_ans_msg_greater:
2508 {
2509   \msg_warning:nnee { enumext } { item-greater-answer } { \g__enumext_store_name_tl }
2510   { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2511 }
```

(End of definition for `\__enumext_check_ans_show:` and others.)

`\__enumext_check_ans_log:` The function `\__enumext_check_ans_log:` will be executed within the function `\__enumext_execute_after_env:` when the key `check-ans` is not active, that is, when `\g__enumext_check_ans_key_bool` is “*false*” and write in the log the appropriate message according to the value of `\g__enumext_item_answer_diff_int` set by the function `\__enumext_item_answer_diff:`.

```
2512 \cs_new_protected:Nn \__enumext_check_ans_log:
2513 {
2514   \int_case:nn { \g__enumext_item_answer_diff_int }
2515   {
2516     { -1 } { \__enumext_check_ans_log_msg_less: }
2517     { 0 } { \__enumext_check_ans_log_msg_same_ok: }
2518     { 1 } { \__enumext_check_ans_log_msg_greater: }
2519   }
2520 }
2521 \cs_new_protected:Nn \__enumext_check_ans_log_msg_less:
2522 {
2523   \msg_log:nnee { enumext } { item-less-answer } { \g__enumext_store_name_tl }
2524   { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2525 }
2526 \cs_new_protected:Nn \__enumext_check_ans_log_msg_same_ok:
2527 {
2528   \msg_log:nnee { enumext } { items-same-answer } { \g__enumext_store_name_tl }
2529   { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2530 }
```

```

2531 \cs_new_protected:Nn \__enumext_check_ans_log_msg_greater:
2532 {
2533   \msg_log:nneee { enumext } { item-greater-answer } { \g__enumext_store_name_tl }
2534   { \g__enumext_envir_name_tl } { \g__enumext_start_line_tl }
2535 }

```

(End of definition for \\_\_enumext\_check\_ans\_log: and others.)

### 13.29.6 Check for \item\* and \anspic\* commands

\\_\_enumext\_check\_starred\_cmd:n

The function \\_\_enumext\_check\_starred\_cmd:n performs an *extra check* for the `keyans`, `keyans*` and `keyanspic` environments. Unlike the *check* executed by `check-ans` key this one is not controlled by any key, it is intended to prevent the forgetting of `\item*` or `\anspic*` in these environments.

```

2536 \cs_new_protected:Npn \__enumext_check_starred_cmd:n #1
2537 {
2538   \int_compare:nNnT
2539     { \g__enumext_check_starred_cmd_int } = { 0 }
2540     {
2541       \msg_warning:nnnV
2542         { enumext } { missing-starred }{ #1 } \l__enumext_check_start_line_env_tl
2543     }
2544   \int_compare:nNnT
2545     { \g__enumext_check_starred_cmd_int } > { 1 }
2546     {
2547       \msg_warning:nnnV
2548         { enumext } { many-starred }{ #1 } \l__enumext_check_start_line_env_tl
2549     }
2550   \int_gzero:N \g__enumext_check_starred_cmd_int
2551   \tl_clear:N \l__enumext_check_start_line_env_tl
2552 }

```

(End of definition for \\_\_enumext\_check\_starred\_cmd:n.)

## 13.30 Keys and functions associated with storage

### 13.30.1 Keys for marks, wrap and show

The `enumext` package provides a set of *(keys)* for manipulating “symbol marks” associated with “answers” and how they are displayed and stored in the *sequence* and *prop list* as well as an internal “label and ref” system.

mark-ans\*  
mark-pos\*  
mark-sep\*  
wrap-ans\*  
wrap-opt  
save-sep  
show-ans  
show-pos

For the `keyans` and `keyans*` environments we will only add the keys `mark-ans*`, `mark-pos*`, `mark-sep*`, `wrap-ans*`, `wrap-opt`, `save-sep`, `show-ans` and `show-pos`.

```

2553 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
2554 {
2555   \keys_define:nn { enumext / #1 }
2556   {
2557     mark-ans* .tl_set:c = { \l__enumext_mark_answer_sym_#2_tl },
2558     mark-ans* .initial:n = \textasteriskcentered,
2559     mark-ans* .value_required:n = true,
2560     mark-pos* .choice:,
2561     mark-pos* / left .code:n = \str_set:cn { \l__enumext_mark_position_#2_str } { l },
2562     mark-pos* / right .code:n = \str_set:cn { \l__enumext_mark_position_#2_str } { r },
2563     mark-pos* / center .code:n = \str_set:cn { \l__enumext_mark_position_#2_str } { c },
2564     mark-pos* / unknown .code:n =
2565       \msg_error:nneee { enumext } { unknown-choice }

```

(End of definition for *mark-ref* and others.)

### 13.30.2 Storing structure of the environments

The idea behind “*storing structure*” in the *sequence* is to have a copy of the *structure of the environment* in which the key `save-ans` is being executed so we must capture the *optional argument* passed to the levels of the environment in which it is executed and “*storing*” this in the *sequence*.

```

\__enumext_store_active_keys:n
\__enumext_store_active_keys_vii:n

```

The functions `\__enumext_store_active_keys:n` and `\__enumext_store_active_keys_vii:n` will be responsible for the “*storing keys*” filtered from the *optional argument* of the environment in which the key `save-ans` is executed and the levels within this for the `enumext` and `enumext*` environments. We will execute this function only if the variable `\l__enumext_store_save_key_X_bool` is false, that is, the key `store-key` is not active, establishing the variable `\l__enumext_store_save_key_X_tl` with the filtered *keys*.

```

2658 \cs_new_protected:Npn \__enumext_store_active_keys:n #1
2659 {
2660     \bool_if:cF { \l__enumext_store_save_key_ \__enumext_level: _bool }
2661     {
2662         \tl_clear:c { \l__enumext_store_save_key_ \__enumext_level: _tl }
2663         \tl_set:ce
2664             { \l__enumext_store_save_key_ \__enumext_level: _tl }
2665             { \__enumext_filter_save_key:n {#1} }
2666     }
2667 }
2668 \cs_new_protected:Npn \__enumext_store_active_keys_vii:n #1
2669 {
2670     \bool_if:NF \l__enumext_store_save_key_vii_bool
2671     {
2672         \tl_clear:N \l__enumext_store_save_key_vii_tl
2673         \tl_set:Ne \l__enumext_store_save_key_vii_tl { \__enumext_filter_save_key:n {#1} }
2674     }
2675 }

```

(End of definition for `\__enumext_store_active_keys:n` and `\__enumext_store_active_keys_vii:n`.)

### 13.30.3 Setting save-key key

Since this “*storing structure*” in the *sequence* established by the `save-ans` key when executing `\anskey` or `anskey*`, we will not be able to modify it. The best thing here is to have a key that allows you to modify the *optional argument* of the “*storing structure*” in the *sequence*.

`save-key` The values set by this key passed in the *optional argument* of the `enumext` and `enumext*` environments will override the values of the `\l__enumext_store_save_key_X_tl` variable set by the functions `\__enumext_store_active_keys:n` and `\__enumext_store_active_keys_vii:n`. Now define the key `save-key` for all levels of `enumext` and `enumext*` environments.

```

2676 \cs_set_protected:Npn \__enumext_tmp:n #1
2677 {
2678     \keys_define:nn { enumext / enumext* }
2679     {
2680         save-key .code:n = \__enumext_parse_save_key_vii:n {##1},
2681         save-key .value_required:n = true,
2682     }
2683     \keys_define:nn { enumext / #1 }
2684     {
2685         save-key .code:n = \__enumext_parse_save_key:n {##1},
2686         save-key .value_required:n = true,
2687     }
2688 }
2689 \clist_map_inline:nn { level-1, level-2, level-3, level-4 } { \__enumext_tmp:n {#1} }

```

(End of definition for *save-key*.)

```

__enumext_parse_save_key:n
  __enumext_parse_save_key_vii:n

```

The functions `__enumext_parse_save_key:n` and `__enumext_parse_save_key_vii:n` will be responsible for “*storing keys*” in the variable `l__enumext_store_save_key_X_tl` for `enumext` and `enumext*`.

```

2690 \cs_new_protected:Npn __enumext_parse_save_key:n #1
2691 {
2692   \bool_set_true:c { l__enumext_store_save_key_ __enumext_level: _bool }
2693   \tl_clear:c { l__enumext_save_key_ __enumext_level: _tl }
2694   \tl_set:ce
2695     { l__enumext_store_save_key_ __enumext_level: _tl }
2696     { __enumext_filter_save_key:n {#1} }
2697 }
2698 \cs_new_protected:Npn __enumext_parse_save_key_vii:n #1
2699 {
2700   \bool_set_true:N \l__enumext_store_save_key_vii_bool
2701   \tl_clear:N \l__enumext_store_save_key_vii_tl
2702   \tl_set:Ne \l__enumext_store_save_key_vii_tl { __enumext_filter_save_key:n {#1} }
2703 }

```

(End of definition for `__enumext_parse_save_key:n` and `__enumext_parse_save_key_vii:n`.)

### 13.30.4 Internal functions to store optional arguments

```

__enumext_filter_save_key:n
  __enumext_filter_save_key_key:n
  __enumext_filter_save_key_pair:nn

```

The function `__enumext_filter_save_key:n` will be in charge of “*filtering keys*” we want to *stored in sequence* where `{#1}` represents the *optional argument* passed to the environment.

```

2704 \cs_new:Npn __enumext_filter_save_key:n #1
2705 {
2706   \use:e
2707   {
2708     \keyval_parse:NNn
2709       __enumext_filter_save_key_key:n
2710       __enumext_filter_save_key_pair:nn {#1}
2711   }
2712 }

```

The function `__enumext_filter_save_key_key:n` will be responsible for “*filtering keys*” that are passed “*without value*” by excluding the `resume`, `resume*`, `reset`, `reset*`, `no-store` and `base-fix` keys.

```

2713 \cs_new:Npn __enumext_filter_save_key_key:n #1
2714 {
2715   \str_case:nnF {#1}
2716   {
2717     { resume } {} { resume* } {} { reset } {} { reset* } {} { no-store } {} { base-fix } {}
2718   }
2719   { , { \exp_not:n {#1} } }
2720 }

```

The function `__enumext_filter_save_key_pair:nn` will be responsible for “*filtering keys*” that are passed “*with value*” by excluding the `series`, `resume`, `save-ans`, `save-ref`, `save-key`, `check-ans`, `show-ans`, `save-pos`, `mark-ans`, `mark-pos`, `mark-sep`, `wrap-ans`, `mark-ans*`, `mark-pos*`, `mark-sep*`, `wrap-ans*`, `wrap-opt`, `save-sep`, `mark-ref`, `mini-env`, `mini-sep`, `mini-right` and `mini-right*` keys.

```

2721 \cs_new:Npn __enumext_filter_save_key_pair:nn #1#2
2722 {
2723   \str_case:nnF {#1}
2724   {
2725     { series } {} { resume } {} { save-ans } {} { save-ref } {}
2726     { save-key } {} { check-ans } {} { show-ans } {} { show-pos } {}
2727     { mark-ans } {} { mark-pos } {} { mark-sep } {} { wrap-ans } {}
2728     { mark-ans* } {} { mark-pos* } {} { mark-sep* } {} { wrap-ans* } {}
2729     { wrap-opt } {} { save-sep } {} { mark-ref } {} { mini-env } {}
2730     { mini-sep } {} { mini-right } {} { mini-right* } {}
2731   }
2732   { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
2733 }

```

(End of definition for `__enumext_filter_save_key:n`, `__enumext_filter_save_key_key:n`, and `__enumext_filter_save_key_pair:nn`.)

### 13.30.5 Function for storing content in prop list

```

__enumext_store_addto_prop:n
__enumext_store_addto_prop:V

```

The function `__enumext_store_addto_prop:n` stores the `{\content}` in *prop list* defined by `save-ans` key. The “*stored content*” is retrieved by means of the `\getkeyans` command.

The form in which the `{\content}` is “*stored*” in the *prop list* is `{\position}{\content}`. This function is used by `\anskey` in `enumext` and `enumext*` environments, `\item*` in `keyans` and `keyans*` environments and `\anspic*` in `keyanspic` environment.

```

2734 \cs_new_protected:Npn __enumext_store_addto_prop:n #1

```

```

2735 {
2736   \prop_gput_if_not_in:cen { g__enumext_ \l__enumext_store_name_tl _prop }
2737   {
2738     \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } + 1 }
2739   }
2740   { #1 }
2741 }
2742 \cs_generate_variant:Nn \__enumext_store_addto_prop:n { V }

```

(End of definition for `\__enumext_store_addto_prop:n`.)

### 13.30.6 Function for storing content in sequence

The function `\__enumext_store_addto_seq:n` stores the  $\{\langle content \rangle\}$  in *sequence* defined by `save-ans` key. This function is used by `\anskey` in `enumext`, `\item*` in `keyans` and `\anspic` in `keyanspic`.

The form in which the  $\{\langle content \rangle\}$  is stored in *sequence* is in a internal `enumext` or `enumext*` environments with the “*same structure*” in which the command was executed.

The “*stored content*” is retrieved by means of the `\printkeyans` command.

```

2743 \cs_new_protected:Npn \__enumext_store_addto_seq:n #1
2744 {
2745   \seq_gput_right:cn { g__enumext_ \l__enumext_store_name_tl _seq } { #1 }
2746 }
2747 \cs_generate_variant:Nn \__enumext_store_addto_seq:n { v, V }

```

(End of definition for `\__enumext_store_addto_seq:n`.)

### 13.30.7 Functions for storing structure in the sequence

The “*storing structure*” is handled by the functions `\__enumext_store_level_open:` and `\__enumext_store_level_close:` which are executed per level within the `enumext` environment.

```

2748 \cs_new_protected:Nn \__enumext_store_level_open:
2749 {
2750   \bool_if:NT \l__enumext_check_answers_bool
2751   {
2752     \tl_if_empty:cTF { l__enumext_store_save_key_ \__enumext_level: _tl }
2753     {
2754       \__enumext_store_addto_seq:n
2755       {
2756         \item \begin{enumext}
2757       }
2758     }
2759     {
2760       \tl_put_left:cn { l__enumext_store_save_key_ \__enumext_level: _tl }
2761       {
2762         \item \begin{enumext} [
2763       }
2764       \tl_put_right:cn { l__enumext_store_save_key_ \__enumext_level: _tl }
2765       {
2766         ]
2767       }
2768       \__enumext_store_addto_seq:v { l__enumext_store_save_key_ \__enumext_level: _tl }
2769     }
2770   }
2771 }
2772 \cs_new_protected:Nn \__enumext_store_level_close:
2773 {
2774   \bool_if:NT \l__enumext_check_answers_bool
2775   {
2776     \__enumext_store_addto_seq:n { \end{enumext} }
2777   }
2778 }

```

(End of definition for `\__enumext_store_level_open:` and `\__enumext_store_level_close:.`)

The “*storing structure*” is handled by the functions `\__enumext_store_level_open_vii:` and `\__enumext_store_level_close_vii:` which are executed in the `enumext*` environment.

```

2779 \cs_new_protected:Nn \__enumext_store_level_open_vii:
2780 {
2781   \bool_if:NT \l__enumext_check_answers_bool
2782   {
2783     \tl_if_empty:NTF \l__enumext_store_save_key_vii_tl
2784     {

```

```

2785         \__enumext_store_addto_seq:n
2786         {
2787             \item \begin{enumext*}
2788         }
2789     }
2790     {
2791         \tl_put_left:Nn \l__enumext_store_save_key_vii_tl
2792         {
2793             \item \begin{enumext*}[
2794             ]
2795             \tl_put_right:Nn \l__enumext_store_save_key_vii_tl
2796             {
2797                 ]
2798             }
2799             \__enumext_store_addto_seq:V \l__enumext_store_save_key_vii_tl
2800         }
2801     }
2802 }
2803 \cs_new_protected:Nn \__enumext_store_level_close_vii:
2804 {
2805     \bool_if:NT \l__enumext_check_answers_bool
2806     {
2807         \__enumext_store_addto_seq:n { \end{enumext*} }
2808     }
2809 }

```

(End of definition for \\_\_enumext\_store\_level\_open\_vii: and \\_\_enumext\_store\_level\_close\_vii:.)

### 13.30.8 Function for show marks and position

```

\__enumext_print_keyans_box:NN
\__enumext_print_keyans_box:cc

```

The function \\_\_enumext\_print\_keyans\_box:NN print a box in the left margin with \l\_\_enumext\_mark\_answer\_sym\_tl used by the `wrap-ans`, `show-ans` and `show-pos` keys. The function takes two arguments:

**#1:** \l\_\_enumext\_labelwidth\_X\_dim  
**#2:** \l\_\_enumext\_labelsep\_X\_dim

```

2810 \cs_new_protected:Nn \__enumext_print_keyans_box:NN
2811 {
2812     \mode_leave_vertical:
2813     \skip_horizontal:n { -\dim_use:N #2 }
2814     \hbox_overlap_left:n
2815     {
2816         \makebox[ \dim_use:N #1 ][ \l__enumext_mark_position_str ]
2817         {
2818             \tl_use:N \l__enumext_mark_answer_sym_tl
2819         }
2820     }
2821     \skip_horizontal:n { \dim_use:N #2 }
2822 }
2823 \cs_generate_variant:Nn \__enumext_print_keyans_box:NN { cc }

```

(End of definition for \\_\_enumext\_print\_keyans\_box:NN.)

### 13.31 The internal label and ref

The function \\_\_enumext\_store\_internal\_ref: handles the “*internal label and ref*” system used by the `save-ref` and `mark-ref` keys for \anskey will allow to execute \ref{<store name : position>} and will return 1.(a).i.A.

```

\__enumext_store_internal_ref:

```

First we will remove the dots “.” from the current <labels>, we do not want to get double dots in our references, then we will place this in the variable \l\_\_enumext\_newlabel\_arg\_two\_tl.

```

2824 \cs_new_protected:Nn \__enumext_store_internal_ref:
2825 {
2826     \cs_set_protected:Npn \__enumext_tmp:n ##1
2827     {
2828         \tl_set_eq:cc { \l__enumext_label_copy_##1_tl } { \l__enumext_label_##1_tl }
2829         \tl_reverse:c { \l__enumext_label_copy_##1_tl }
2830         \tl_remove_once:cn { \l__enumext_label_copy_##1_tl } { . }
2831         \tl_reverse:c { \l__enumext_label_copy_##1_tl }
2832     }
2833     \clist_map_inline:nn { i, ii, iii, iv, vii } { \__enumext_tmp:n {##1} }
2834     \cs_set:Npn \__enumext_tmp:n ##1
2835     { . \tl_use:c { \l__enumext_label_copy_ \int_to_roman:n {##1} _tl } }

```

Here we need to analyse the cases where the environment is started with `enumext*` and if `\anskey` or `anskey*` is running alone in it or if it is running in a nested `enumext` environment within the starting environment.

```

2836 \bool_lazy_all:nT
2837 {
2838   { \bool_if_p:N \g__enumext_starred_bool }
2839   { \int_compare_p:nNn { \l__enumext_level_int } = { 0 } }
2840 }
2841 {
2842   \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2843   { \tl_use:N \l__enumext_label_copy_vii_tl }
2844 }
2845 \bool_lazy_all:nT
2846 {
2847   { \bool_not_p:n { \g__enumext_standar_bool } }
2848   { \bool_if_p:N \l__enumext_standar_bool }
2849   { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2850 }
2851 {
2852   \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2853   {
2854     \tl_use:N \l__enumext_label_copy_vii_tl
2855     \int_step_function:nnN { 1 } { \l__enumext_level_int } \__enumext_tmp:n
2856   }
2857 }

```

If started with `enumext` and if `\anskey` or `anskey*` is running alone in it or if it is running in a nested `enumext*` environment within the starting environment.

```

2858 \bool_lazy_all:nT
2859 {
2860   { \bool_if_p:N \g__enumext_standar_bool }
2861   { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2862   { \int_compare_p:nNn { \l__enumext_level_h_int } = { 0 } }
2863 }
2864 {
2865   \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2866   {
2867     \tl_use:N \l__enumext_label_copy_i_tl
2868     \int_step_function:nnN { 2 } { \l__enumext_level_int } \__enumext_tmp:n
2869   }
2870 }
2871 \cs_set:Npn \__enumext_tmp:n ##1
2872 { \tl_use:c { l__enumext_label_copy_ \int_to_roman:n {##1} _tl } . }
2873 \bool_lazy_all:nT
2874 {
2875   { \bool_if_p:N \g__enumext_standar_bool }
2876   { \bool_if_p:N \l__enumext_starred_bool }
2877   { \int_compare_p:nNn { \l__enumext_level_int } > { 0 } }
2878 }
2879 {
2880   \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
2881   {
2882     \int_step_function:nnN { 1 } { \l__enumext_level_int } \__enumext_tmp:n
2883     \tl_use:N \l__enumext_label_copy_vii_tl
2884   }
2885 }

```

Now we set the variable `\l__enumext_newlabel_arg_one_tl` which will contain  $\langle \textit{store name} : \textit{position} \rangle$ .

```

2886 \tl_put_right:Ne \l__enumext_newlabel_arg_one_tl
2887 {
2888   \l__enumext_store_name_tl \c_colon_str
2889   \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } }
2890 }

```

Now execute the function `\__enumext_newlabel:nn` and save the result in the variable `\l__enumext_write_aux_file_tl` and finally we write in the `.aux` file.

```

2891 \tl_put_right:Ne \l__enumext_write_aux_file_tl
2892 {
2893   \__enumext_newlabel:nn
2894   { \exp_not:V \l__enumext_newlabel_arg_one_tl }
2895   { \l__enumext_newlabel_arg_two_tl }
2896 }
2897 \l__enumext_write_aux_file_tl

```

```
2898 }
```

(End of definition for `\__enumext_store_internal_ref:`)

### 13.32 Common functions for `\anskey` and `anskey*` environment

```
\__enumext_store_anskey_arg:n
```

The internal function `\__enumext_store_anskey_arg:n` first we pass the  $\langle \textit{argument} \rangle$  to the *prop list*, then checks the state of the variable `\l__enumext_store_ref_key_bool` handled by the *save-ref* key and will call the function `\__enumext_store_internal_ref:` for the “*internal label and ref*” system. Followed by this if the *show-ans* or *show-pos* keys are active we will show the “*wrapped*”  $\langle \textit{argument} \rangle$ .

```
2899 \cs_new_protected:Npn \__enumext_store_anskey_arg:n #1
2900 {
2901   \int_gincr:N \g__enumext_item_anskey_int
2902   \__enumext_store_addto_prop:n {#1}
2903   \bool_if:NT \l__enumext_store_ref_key_bool
2904   {
2905     \__enumext_store_internal_ref:
2906   }
2907   \__enumext_anskey_show_wrap_left:n { #1 }
```

Now we start processing the  $[\langle \textit{key} = \textit{val} \rangle]$  passed to the command to build our `\item` in the variable `\l__enumext_store_anskey_arg_tl` which we will “*store*” in the *sequence*. First we clear the variable `\l__enumext_store_anskey_arg_tl` and process the  $\langle \textit{keys} \rangle$ , if the *break-col* key is present and the command is running under *enumext* (not in *enumext\**) we will add `\columnbreak` and then `\item`.

```
2908   \tl_clear:N \l__enumext_store_anskey_arg_tl
2909   \bool_lazy_and:nnT
2910   { \bool_if_p:N \l__enumext_store_columns_break_bool }
2911   { \bool_not_p:n { \l__enumext_starred_bool } }
2912   {
2913     \tl_put_left:Nn \l__enumext_store_anskey_arg_tl { \columnbreak }
2914   }
2915   \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { \item }
```

If the *item-join* key is present and the command is running under *enumext\** we will add  $\langle \textit{number} \rangle$  to `\l__enumext_store_anskey_arg_tl`.

```
2916   \bool_lazy_and:nnT
2917   { \bool_not_p:n { \l__enumext_starred_bool } }
2918   { \int_compare_p:nNn { \l__enumext_store_item_join_int } > { 1 } }
2919   {
2920     \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2921     {
2922       ( \exp_not:V \l__enumext_store_item_join_int )
2923     }
2924   }
```

And now we will review the keys *item-star*, *item-sym\** and *item-pos\** and pass them to `\l__enumext_store_anskey_arg_tl` along with the  $\langle \textit{argument} \rangle$  for `\anskey` or  $\langle \textit{body} \rangle$  for `anskey*`.

```
2925   \bool_if:NTF \l__enumext_store_item_star_bool
2926   {
2927     \tl_put_right:Nn \l__enumext_store_anskey_arg_tl { * }
2928     \tl_if_empty:NF \l__enumext_store_item_symbol_tl
2929     {
2930       \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2931       {
2932         [ \exp_not:V \l__enumext_store_item_symbol_tl ]
2933       }
2934     }
2935     \dim_compare:nT
2936     {
2937       \l__enumext_store_item_symbol_sep_dim != \c_zero_dim
2938     }
2939     {
2940       \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2941       {
2942         [ \exp_not:V \l__enumext_store_item_symbol_sep_dim ]
2943       }
2944     }
2945     \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
2946   }
2947   {
2948     \tl_put_right:Nn \l__enumext_store_anskey_arg_tl {#1}
2949   }
```

Finally we check if the `save-ref` key are active along with the `hyperref` package load, if both conditions are met, it will create the `\hyperlink` with “*symbol*” set by `mark-ref` key and then store in *sequence*.

```

2950 \bool_lazy_and:nnT
2951 { \bool_if_p:N \l__enumext_store_ref_key_bool }
2952 { \bool_if_p:N \l__enumext_hyperref_bool }
2953 {
2954   \tl_put_right:Ne \l__enumext_store_anskey_arg_tl
2955   {
2956     \hfill \exp_not:N \hyperlink { \exp_not:V \l__enumext_newlabel_arg_one_tl }
2957     { \exp_not:V \l__enumext_mark_ref_sym_tl }
2958   }
2959 }
2960 \__enumext_store_addto_seq:V \l__enumext_store_anskey_arg_tl
2961 }

```

(End of definition for `\__enumext_store_anskey_arg:n`.)

`\__enumext_anskey_show_wrap_arg:n`

The function `\__enumext_anskey_show_wrap_arg:n` “wraps” the  $\langle argument \rangle$  passed to `\anskey` and the  $\langle body \rangle$  for `anskey*` when using the `wrap-ans` and `wrap-sep` keys.

```

2962 \cs_new_protected:Npn \__enumext_anskey_show_wrap_arg:n #1
2963 {
2964   \par
2965   \bool_if:NTF \l__enumext_starred_bool
2966   {
2967     \dim_compare:nNnT { \l__enumext_mark_sym_sep_dim } = { \c_zero_dim }
2968     {
2969       \dim_set:Nn \l__enumext_mark_sym_sep_dim { \l__enumext_labelsep_vii_dim }
2970     }
2971     \__enumext_print_keyans_box:NN
2972     \l__enumext_labelwidth_vii_dim \l__enumext_mark_sym_sep_dim
2973   }
2974   {
2975     \dim_compare:nNnT { \l__enumext_mark_sym_sep_dim } = { \c_zero_dim }
2976     {
2977       \dim_set:Nn \l__enumext_mark_sym_sep_dim
2978       {
2979         \dim_use:c { \l__enumext_labelsep_ \__enumext_level: _dim }
2980       }
2981     }
2982     \__enumext_print_keyans_box:cc
2983     { \l__enumext_labelwidth_ \__enumext_level: _dim } { \l__enumext_mark_sym_sep_dim }
2984   }
2985   \__enumext_anskey_wrapper:n { #1 }
2986 }

```

(End of definition for `\__enumext_anskey_show_wrap_arg:n`.)

`\__enumext_anskey_show_wrap_left:n`

The function `\__enumext_anskey_show_wrap_left:n` will show the “*mark*” defined by the `mark-ans` key or the “*position*” of the  $\langle content \rangle$  stored in the *prop list* when using the `show-pos` key on the left margin next to the “wraps”  $\langle argument \rangle$  passed to `\anskey` and the  $\langle body \rangle$  in `anskey*` on the right side when using the `show-ans` key.

```

2987 \cs_new_protected:Npn \__enumext_anskey_show_wrap_left:n #1
2988 {
2989   \bool_if:NT \l__enumext_show_answer_bool
2990   {
2991     \__enumext_anskey_show_wrap_arg:n { #1 }
2992   }
2993   \bool_if:NT \l__enumext_show_position_bool
2994   {
2995     \tl_set:Ne \l__enumext_mark_answer_sym_tl
2996     {
2997       \group_begin:
2998       \exp_not:N \normalfont
2999       \exp_not:N \footnotesize [ \int_eval:n
3000       {
3001         \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop }
3002       }
3003       ]
3004       \group_end:
3005     }

```

```

3006         \__enumext_anskey_show_wrap_arg:n { #1 }
3007     }
3008 }

```

(End of definition for \\_\_enumext\_anskey\_show\_wrap\_left:n.)

### 13.33 The command \anskey

Since we will be “*storing content*” in a `list` environment within *sequences* and can (more or less) manage the options passed to each level, it is necessary that we have a little more control over `\item` when storing.

The `\anskey` command will cover this point and give it similar behaviour to that of `\item` in the `enumext` and `enumext*` environments executed as follows `\anskey[⟨key = val⟩]{⟨content⟩}`.

First we'll add the keys `break-col`, `item-join`, `item-star`, `item-sym*` and `item-pos*`.

```

break-col \keys_define:nn { enumext / anskey }
item-join
item-star
item-sym*
item-pos*
unknown
\__enumext_anskey_unknown:n
\__enumext_anskey_unknown:n
3009 \keys_define:nn { enumext / anskey }
3010 {
3011     break-col .bool_set:N = \l__enumext_store_columns_break_bool,
3012     break-col .default:n = true,
3013     break-col .value_forbidden:n = true,
3014     item-join .int_set:N = \l__enumext_store_item_join_int,
3015     item-join .value_required:n = true,
3016     item-star .bool_set:N = \l__enumext_store_item_star_bool,
3017     item-star .default:n = true,
3018     item-star .value_forbidden:n = true,
3019     item-sym* .tl_set:N = \l__enumext_store_item_symbol_tl,
3020     item-sym* .value_required:n = true,
3021     item-pos* .dim_set:N = \l__enumext_store_item_symbol_sep_dim,
3022     item-pos* .value_required:n = true,
3023     unknown .code:n = { \__enumext_anskey_unknown:n {#1} },
3024 }

```

The `⟨keys⟩` are stored in `\l_keys_key_str` and the value (if any) is passed as an argument to the function `\__enumext_anskey_unknown:n`.

```

3025 \cs_new_protected:Npn \__enumext_anskey_unknown:n #1
3026 {
3027     \exp_args:NV \__enumext_anskey_unknown:nn \l_keys_key_str {#1}
3028 }
3029 \cs_new_protected:Npn \__enumext_anskey_unknown:nn #1 #2
3030 {
3031     \tl_if_blank:nTF {#2}
3032     {
3033         \msg_error:nnn { enumext } { anskey-cmd-key-unknown } {#1}
3034     }
3035     {
3036         \msg_error:nnnn { enumext } { anskey-cmd-key-value-unknown } {#1} {#2}
3037     }
3038 }

```

(End of definition for `break-col` and others.)

- 🌱 The `\anskey` command will only be present when using the `save-ans` key in `enumext` and `enumext*` environments, otherwise it will return an error.

`\anskey` We will first call the function `\__enumext_anskey_safe_outer:` to be sure where we execute the command, then we will check the state of the variable `\l__enumext_check_answers_bool` set by the key `no-store`, if is true we will increment `\g__enumext_item_anskey_int` for the internal “*check answer*” system and execute the function `\__enumext_anskey_safe_inner:n` to ensure that the command is not nested and that the argument is not empty, finally search the `[⟨key = val⟩]` and call the function `\__enumext_store_anskey_arg:n`.

```

3039 \NewDocumentCommand \anskey { o +m }
3040 {
3041     \__enumext_anskey_safe_outer:
3042     \group_begin:
3043         \bool_if:NT \l__enumext_check_answers_bool
3044         {
3045             \tl_if_novalue:nF {#1}
3046             {
3047                 \keys_set:nn { enumext / anskey } {#1}
3048             }
3049             \tl_if_blank:nTF {#2}
3050             {
3051                 \msg_error:nn { enumext } { anskey-empty-arg }

```

```

3052         }
3053     {
3054         \__enumext_anskey_safe_inner:
3055         \__enumext_store_anskey_arg:n {#2}
3056     }
3057 }
3058 \group_end:
3059 }

```

(End of definition for `\anskey`. This function is documented on page 14.)

### 13.33.1 Internal functions for the command

```

\__enumext_anskey_safe_outer:
\__enumext_anskey_safe_inner:

```

The `\__enumext_store_anskey_safe_outer:` function will return the appropriate messages when the command is executed outside the environment in which the `save-ans` key was activated.

```

3060 \cs_new_protected:Nn \__enumext_anskey_safe_outer:
3061 {

3083     {
3084         \msg_error:nn { enumext } { anskey-nested }
3085     }
3086     \bool_if:NF \l__enumext_item_number_bool
3087     {
3088         \msg_error:nn { enumext } { anskey-unnumber-item }
3089     }
3090     \mode_if_math:T
3091     {
3092         \msg_error:nne { enumext } { anskey-math-mode } { \c_backslash_str anskey }
3093     }
3094 }

```

(End of definition for `\__enumext_anskey_safe_outer:` and `\__enumext_anskey_safe_inner:`.)

### 13.34 The environment `anskey*`

The original implementation of the `anskey*` environment used non-public functions from the `scontents`[4] package, which was not the best approach. Fortunately L<sup>A</sup>T<sub>E</sub>X release 2025-06-01 implemented the new `c`-type argument in the `\lcmd`[13], with which we can record the *(body)* of the environment in *verbatim mode* and `\tl_retokenize:n` (wrapper around the `\scantokens`) provide by L<sup>A</sup>T<sub>E</sub>X3 release 2025-07-08 do the work as the original implementation.

```

break-col
item-join
item-star
item-sym*
item-pos*
force-eol
write-env
overwrite
unknown

```

First we add the same keys from the `\anskey` command along with the `force-eol`, `write-env` and `overwrite` keys that were in the original implementation that used the `scontents` support package for these.

```

3095 \keys_define:nn { enumext / anskey* }
3096 {
3097     break-col .bool_set:N = \l__enumext_store_columns_break_bool,
3098     break-col .default:n = true,
3099     break-col .value_forbidden:n = true,
3100     item-join .int_set:N = \l__enumext_store_item_join_int,

```

```

3101     item-join .value_required:n = true,
3102     item-star .bool_set:N = \l__enumext_store_item_star_bool,
3103     item-star .default:n = true,
3104     item-star .value_forbidden:n = true,
3105     item-sym* .tl_set:N = \l__enumext_store_item_symbol_tl,
3106     item-sym* .value_required:n = true,
3107     item-pos* .dim_set:N = \l__enumext_store_item_symbol_sep_dim,
3108     item-pos* .value_required:n = true,
3109     force-eol .bool_set:N = \l__enumext_anskey_env_force_eol_bool,
3110     force-eol .initial:n = false,
3111     force-eol .default:n = true,
3112     write-env .code:n = {
3113         \bool_set_true:N \l__enumext_write_anskey_env_bool
3114         \tl_set:Nn \l__enumext_write_anskey_env_file_name_tl {#1}
3115     },
3116     write-env .value_required:n = true,
3117     overwrite .bool_set:N = \l__enumext_anskey_env_overwrite_bool,
3118     overwrite .initial:n = false,
3119     overwrite .default:n = true,
3120     unknown .code:n = { \__enumext_anskey_env_unknown:n {#1} },
3121 }

```

(End of definition for `break-col` and others.)

\\_\_enumext\_anskey\_env\_unknown:n  
 \\_\_enumext\_anskey\_env\_unknown:nn

The *⟨keys⟩* are stored in `\l_keys_key_str` and the value (if any) is passed as an argument to the function `\__enumext_anskey_env_unknown:n`.

```

3122 \cs_new_protected:Npn \__enumext_anskey_env_unknown:n #1
3123 {
3124     \exp_args:NV \__enumext_anskey_env_unknown:nn \l_keys_key_str {#1}

3164     \iow_now:Nn \__enumext_write_anskey_env_file_iow {#2}
3165     \iow_close:N \__enumext_write_anskey_env_file_iow
3166   }
3167 }
3168 \cs_generate_variant:Nn \__enumext_anskey_env_file_write:nn { VV }

```

(End of definition for `\__enumext_anskey_env_file_if_writable:n` and others.)

**anskey\*** First, we'll call the function `\__enumext_anskey_env_safe_outer:` to make sure where we're running the environment, then, we'll check the state of the variable `\l__enumext_check_answers_bool` set by the key `no-store`. If it's true, we'll look for `[⟨key = val⟩]` and verify that the *argument* *c*-type `⟨body⟩` is not empty. Finally, we'll run the internal check function `\__enumext_anskey_env_safe_inner:n` and call the function `\__enumext_store_anskey_arg:n`.

```

3169 \NewDocumentEnvironment{anskey*}{ o c }
3170 {
3171   \__enumext_anskey_env_safe_outer:
3172   \bool_if:NT \l__enumext_check_answers_bool
3173   {
3174     \tl_if_novalue:nF {#1}
3175     {
3176       \keys_set:nn { enumext / anskey* } {#1}
3177     }
3178     \tl_if_blank:nTF {#2}
3179     {
3180       \msg_error:nn { enumext } { anskey-empty-arg }
3181     }
3182     {
3183       \__enumext_anskey_env_safe_inner:
3184       \__enumext_store_anskey_env:n {#2}
3185     }
3186   }
3187 } { }

```

(End of definition for `anskey*`. This function is documented on page 15.)

### 13.34.1 Internal functions for the environment

`\__enumext_anskey_env_safe_outer:` The function `\__enumext_store_anskey_safe_outer:` will return the appropriate messages when `anskey*` is executed outside the environment in which the `save-ans` key was activated or within the `keyans`, `keyans*` or `keyanspic` environments.

```

3188 \cs_new_protected:Nn \__enumext_anskey_env_safe_outer:
3189 {
3190   \bool_if:NF \l__enumext_store_active_bool
3191   {
3192     \msg_error:nnn { enumext } { anskey-env-error } { anskey* }
3193   }
3194   \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
3195   {
3196     \msg_error:nnn { enumext } { anskey-env-wrong } { keyans }
3197   }
3198   \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
3199   {
3200     \msg_error:nnn { enumext } { anskey-env-wrong } { keyans* }
3201   }
3202   \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
3203   {
3204     \msg_error:nnn { enumext } { anskey-env-wrong } { keyanspic }
3205   }
3206 }

```

The function `\__enumext_anskey_env_safe_inner:` will first check if preceded by a not numbered `\item` or if it is in *math mode* returning the appropriate messages.

```

3207 \cs_new_protected:Nn \__enumext_anskey_env_safe_inner:
3208 {
3209   \bool_if:NF \l__enumext_item_number_bool
3210   {
3211     \msg_error:nn { enumext } { anskey-unnumber-item }

```

```

3212     }
3213     \mode_if_math:T
3214     {
3215         \msg_error:nnn { enumext } { anskey-math-mode } { anskey* }
3216     }
3217 }

```

The `\__enumext_store_anskey_env:n` function will first pass the `c`-type argument *(body)* to the variable `\l__enumext_store_anskey_env_tl` and replace the macro `\obeyedline` with `^^J` and then execute the `write-env` and `overwrite` keys, check the state of the variable `\l__enumext_anskey_env_force_eol_bool` managed by the `force-eol` key and we will add `\c__enumext_anskey_env_hidden_space_str` if necessary. Finally we will use `\exp_args:N` on the `\__enumext_store_anskey_arg:n` to expand the `\tl_retokenize:n` function which rescans the `\l__enumext_store_anskey_env_tl` variable before processing it.

```

3218 \cs_new_protected:Npn \__enumext_store_anskey_env:n #1
3219 {
3220     \tl_set:Nn \l__enumext_store_anskey_env_tl {#1}
3221     \RenewDocumentCommand \obeyedline { } { \iow_char:N ^^J }
3222     \tl_replace_all:Nee \l__enumext_store_anskey_env_tl { \obeyedline } { \iow_char:N ^^J }
3223     \__enumext_anskey_env_file_write:VV
3224     \l__enumext_write_anskey_env_file_name_tl \l__enumext_store_anskey_env_tl
3225     \bool_if:NF \l__enumext_anskey_env_force_eol_bool
3226     {
3227         \tl_put_right:Nc \l__enumext_store_anskey_env_tl
3228         {
3229             \c__enumext_anskey_env_hidden_space_str
3230         }
3231     }
3232     \exp_args:Nc
3233     \__enumext_store_anskey_arg:n
3234     {
3235         \tl_retokenize:n { \l__enumext_store_anskey_env_tl }
3236     }
3237 }

```

Since `\obeyedline` can be redefined by the user, for example to `\mbox{}\par`, it is necessary to redefine it to `^^J` in order to use `\tl_replace_all:Nee` otherwise it returns an error.

(End of definition for `\__enumext_anskey_env_safe_outer:`, `\__enumext_anskey_env_safe_inner:`, and `\__enumext_store_anskey_env:n`)

### 13.35 Executing check-ans system and write .log

`\__enumext_execute_after_env:`

The `\__enumext_execute_after_env:` function will first return the appropriate message for the end of the environment in which the `save-ans` key is being executed, then call the `\__enumext_item_answer_diff:` function and then will write the values of the global variables used to the `.log` file. If the key `check-ans` is active it will execute the function `\__enumext_check_ans_show:` and show the result in the terminal, otherwise it will execute the function `\__enumext_check_ans_log:` and write the results in the `.log` file and finally we execute the function `\__enumext_reset_global_vars:` returning the used variables to their original state.

```

3238 \cs_new_protected:Nn \__enumext_execute_after_env:
3239 {
3240     \int_compare:nNtT { \l__enumext_level_int } = { 0 }
3241     {
3242         \tl_if_empty:NF \g__enumext_store_name_tl
3243         {
3244             \__enumext_stop_save_ans_msg:
3245             \__enumext_item_answer_diff:
3246             \__enumext_log_global_vars:
3247             \__enumext_log_answer_vars:
3248             \bool_if:NTF \g__enumext_check_ans_key_bool
3249             {
3250                 \__enumext_check_ans_show:
3251             }
3252             { \__enumext_check_ans_log: }
3253         }
3254         \__enumext_reset_global_vars:
3255     }
3256 }

```

This function is passed to the function `\__enumext_after_env:nn` for the environments `enumext` (§13.42) and `enumext*` (§13.47) and it is executed only when the environments are not nested or at some level of these..

(End of definition for `\__enumext_execute_after_env:`.)

### 13.36 Common functions for `keyans`, `keyans*` and `keyanspic`

#### 13.36.1 Storing content in prop list

`\__enumext_keyans_addto_prop:n`

The function `\__enumext_keyans_addto_prop:n` will pass the the current  $\langle label \rangle$  for `\item*` in `keyans` environment and the current  $\langle label \rangle$  for `\anspic*` in `keyanspic` environment followed by the  $\langle contents \rangle$  of the *optional argument* of both commands to the `\l__enumext_store_current_label_tl` variable, which will be stored to the *prop list* defined by the `save-ans` key using the function `\__enumext_store_addto_prop:V`.

```

3257 \cs_new_protected:Npn \__enumext_keyans_addto_prop:n #1
3258 {
3259   \tl_clear:N \l__enumext_store_current_label_tl
3260   \int_compare:nNnTF { \l__enumext_keyans_pic_level_int } = { 1 }
3261   {
3262     \tl_put_right:Ne \l__enumext_store_current_label_tl { \l__enumext_label_vi_tl }
3263   }
3264   {
3265     \tl_put_right:Ne \l__enumext_store_current_label_tl { \l__enumext_label_v_tl }
3266   }

```

If the *optional argument* is present and the `save-sep` key is not empty, we save it.

```

3267   \tl_if_novalue:nF { #1 }
3268   {
3269     \tl_if_empty:NF \l__enumext_store_keyans_item_opt_sep_v_tl
3270     {
3271       \tl_put_right:NV \l__enumext_store_current_label_tl \l__enumext_store_keyans_item_opt_sep_v_tl
3272     }
3273     \tl_put_right:Nn \l__enumext_store_current_label_tl { #1 }
3274   }
3275   \__enumext_store_addto_prop:V \l__enumext_store_current_label_tl
3276 }

```

(End of definition for `\__enumext_keyans_addto_prop:n`.)

#### 13.36.2 The `save-ref` key for `keyans`, `keyans*` and `keyanspic`

The “*internal label and ref*” system for the `keyans`, `keyans*` and `keyanspic` environments has *slight differences* with the one implemented for `\anskey` basically because in this environments the interest is in the current  $\langle label \rangle$  for `\item*` and `\anspic*` with the  $\langle contents \rangle$  of the *optional argument*. The mechanism defined here will allow to execute `\ref{\langle store name : position \rangle}` and will return `1.(A)`.

`\__enumext_keyans_store_ref:`  
`\__enumext_keyans_store_ref_aux_i:`  
`\__enumext_keyans_store_ref_aux_ii:`

The function `\__enumext_keyans_store_ref:` handles the “*internal label and ref*” system used by the `save-ref` key for `\item*` and `\anspic*` commands. First we will create copies of the current  $\langle labels \rangle$  and remove the dots “.” from them, we do not want to get double dots in references.

```

3277 \cs_new_protected:Nn \__enumext_keyans_store_ref:
3278 {
3279   \bool_if:NT \l__enumext_store_ref_key_bool
3280   {
3281     \cs_set_protected:Npn \__enumext_tmp:n ##1
3282     {
3283       \tl_set_eq:cc { \l__enumext_label_copy_##1_tl } { \l__enumext_label_##1_tl }
3284       \tl_reverse:c { \l__enumext_label_copy_##1_tl }
3285       \tl_remove_once:cn { \l__enumext_label_copy_##1_tl } { . }
3286       \tl_reverse:c { \l__enumext_label_copy_##1_tl }
3287     }
3288     \clist_map_inline:nn { i, v, vi, vii, viii } { \__enumext_tmp:n {##1} }
3289     \__enumext_keyans_store_ref_aux_i:
3290   }
3291 }

```

The auxiliary function `\__enumext_keyans_store_ref_aux_i:` set the variable `\l__enumext_newlabel_arg_one_tl` which will contain  $\{\langle store name : position \rangle\}$  analyzing whether the environment in which they are executed is `enumext*` or `enumext`.

```

3292 \cs_new_protected:Nn \__enumext_keyans_store_ref_aux_i:
3293 {
3294   \bool_if:NT \g__enumext_starred_bool
3295   {
3296     \tl_set_eq:NN \l__enumext_label_copy_i_tl \l__enumext_label_copy_vii_tl
3297   }
3298   \int_compare:nNnT { \l__enumext_keyans_pic_level_int } = { 1 }
3299   {

```

```

3300     \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
3301     { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_vi_tl }
3302   }
3303   \int_compare:nNt { \l__enumext_keyans_level_int } = { 1 }
3304   {
3305     \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
3306     { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_v_tl }
3307   }
3308   \int_compare:nNt { \l__enumext_keyans_level_h_int } = { 1 }
3309   {
3310     \tl_put_right:Ne \l__enumext_newlabel_arg_two_tl
3311     { \l__enumext_label_copy_i_tl . \l__enumext_label_copy_viii_tl }
3312   }
3313   \tl_put_right:Ne \l__enumext_newlabel_arg_one_tl
3314   {
3315     \l__enumext_store_name_tl \c_colon_str
3316     \int_eval:n { \prop_count:c { g__enumext_ \l__enumext_store_name_tl _prop } }
3317   }
3318   \__enumext_keyans_store_ref_aux_ii:
3319 }

```

Now auxiliary function `\__enumext_keyans_store_ref_aux_ii:` save the result in the variable `\l__enumext_write_aux_file_tl` and finally we write in the `.aux` file.

```

3320 \cs_new_protected:Nn \__enumext_keyans_store_ref_aux_ii:
3321 {
3322   \tl_put_right:Ne \l__enumext_write_aux_file_tl
3323   {
3324     \__enumext_newlabel:nn
3325     { \exp_not:V \l__enumext_newlabel_arg_one_tl }
3326     { \l__enumext_newlabel_arg_two_tl }
3327   }
3328   \l__enumext_write_aux_file_tl
3329 }

```

(End of definition for `\__enumext_keyans_store_ref:`, `\__enumext_keyans_store_ref_aux_i:`, and `\__enumext_keyans_store_ref_aux_ii:`.)

### 13.36.3 Storing content in sequence

`\__enumext_keyans_addto_seq:n`  
`\__enumext_keyans_addto_seq_link:`

The function `\__enumext_keyans_addto_seq:n` will pass the contents of the current *⟨label⟩* `\l__enumext_label_v_tl` for the `keyans` environment and the `\l__enumext_label_vi_tl` for the `keyanspic` environment when using `\item*` and `\anspic*`, followed by the *⟨contents⟩* of the *optional argument* of both commands to the `\l__enumext_store_current_label_tl` variable to the sequence defined by the `save-ans` key.

```

3330 \cs_new_protected:Npn \__enumext_keyans_addto_seq:n #1
3331 {
3332   \tl_clear:N \l__enumext_store_current_label_tl
3333   \int_compare:nNt { \l__enumext_keyans_pic_level_int } = { 1 }
3334   {
3335     \tl_put_right:Ne \l__enumext_store_current_label_tl { \item \l__enumext_label_vi_tl }
3336   }
3337   {
3338     \tl_put_right:Ne \l__enumext_store_current_label_tl { \item \l__enumext_label_v_tl }
3339   }
3340   \tl_if_novalue:nF { #1 }
3341   {
3342     \tl_if_empty:NF \l__enumext_store_keyans_item_opt_sep_v_tl
3343     {
3344       \tl_put_right:NV \l__enumext_store_current_label_tl \l__enumext_store_keyans_item_opt_
3345     }
3346     \tl_put_right:Nn \l__enumext_store_current_label_tl { #1 }
3347   }
3348   \__enumext_keyans_addto_seq_link:
3349 }

```

Checks if the `save-ref` key is active along with the `hyperref` package load, if both conditions are met, it will create the `\hyperlink` and then store using the `\__enumext_store_addto_seq:V` function. Finally, copy the contents of the variable `\l__enumext_store_current_label_tl` into the global variable `\g__enumext_check_ans_item_tl` to be used by the function `\__enumext_check_starred_cmd:n` and increment the value of the integer variable `\g__enumext_item_anskey_int` handled by the `check-ans` key.

```

3350 \cs_new_protected:Nn \__enumext_keyans_addto_seq_link:

```

```

3351 {
3352   \bool_lazy_and:nnT
3353   { \bool_if_p:N \l__enumext_store_ref_key_bool }
3354   { \bool_if_p:N \l__enumext_hyperref_bool }
3355   {
3356     \tl_put_right:Ne \l__enumext_store_current_label_tl
3357     {
3358       \hfill \exp_not:N \hyperlink
3359       {
3360         \exp_not:V \l__enumext_newlabel_arg_one_tl
3361       }
3362       { \exp_not:V \l__enumext_mark_ref_sym_tl }
3363     }
3364   }
3365   \__enumext_store_addto_seq:V \l__enumext_store_current_label_tl
3366   \bool_if:NT \l__enumext_check_answers_bool
3367   {
3368     \int_gincr:N \g__enumext_item_anskey_int
3369   }
3370 }

```

(End of definition for `\__enumext_keyans_addto_seq:n` and `\__enumext_keyans_addto_seq_link:.`)

### 13.36.4 The show-ans and show-pos keys for keyans and keyanspic

The function `\__enumext_keyans_save_item_opt:n` will save the optional argument of `\item*` and `\anspic*` in the variable `\l__enumext_store_current_opt_arg_tl`.

```

\__enumext_keyans_save_item_opt:n
\__enumext_keyans_show_item_opt:
\__enumext_keyans_show_item_opt_viii:

```

```

3371 \cs_new_protected:Npn \__enumext_keyans_save_item_opt:n #1
3372 {
3373   \tl_if_novalue:nF { #1 }
3374   {
3375     \tl_set:Nn \l__enumext_store_current_opt_arg_tl { #1 }
3376   }
3377 }

```

The function `\__enumext_keyans_show_item_opt:` will print the optional arguments of `\item*` and `\anspic*` when the show-ans or show-pos keys are set next to the key `wrap-opt` in `keyans` and `keyanspic` environments.

```

3378 \cs_new_protected:Nn \__enumext_keyans_show_item_opt:
3379 {
3380   \tl_if_empty:NF \l__enumext_store_current_opt_arg_tl
3381   {
3382     \bool_lazy_or:nnT
3383     { \bool_if_p:N \l__enumext_show_answer_bool }
3384     { \bool_if_p:N \l__enumext_show_position_bool }
3385     {
3386       \__enumext_keyans_wrapper_opt_v:n
3387       { \l__enumext_store_current_opt_arg_tl } \c_space_tl
3388     }
3389   }
3390 }

```

The function `\__enumext_keyans_show_item_opt_viii:` will print the optional argument of `\item*` when the `show-ans` or `show-pos` keys are set next to the key `wrap-opt` in `keyans*` environment.

```

3391 \cs_new_protected:Nn \__enumext_keyans_show_item_opt_viii:
3392 {
3393   \tl_if_empty:NF \l__enumext_store_current_opt_arg_tl
3394   {
3395     \bool_lazy_or:nnT
3396     { \bool_if_p:N \l__enumext_show_answer_bool }
3397     { \bool_if_p:N \l__enumext_show_position_bool }
3398     {
3399       \__enumext_keyans_wrapper_opt_viii:n
3400       { \l__enumext_store_current_opt_arg_tl } \c_space_tl
3401     }
3402   }
3403 }

```

(End of definition for `\__enumext_keyans_save_item_opt:n`, `\__enumext_keyans_show_item_opt:`, and `\__enumext_keyans_show_item_opt_viii:.`)

```

    \__enumext_keyans_pos_mark_set:
\__enumext_keyans_show_ans:
\__enumext_keyans_show_pos:

```

The function `\__enumext_keyans_pos_mark_set:` adjusts the horizontal spaces for the `mark-sep*` key taking into account the value of the `align` key and the width of  $\langle label \rangle$ .

```

3404 \cs_new_protected:Nn \__enumext_keyans_pos_mark_set:
3405 {
3406   \__enumext_label_width_by_box:Nn

```

(End of definition for `\__enumext_keyans_pos_mark_set:`, `\__enumext_keyans_show_ans:`, and `\__enumext_keyans_show_pos:`.)

### 13.37 Redefining `\item` and `\makelabel` in `enumext`

Redefining the `\item` command is not as simple as I thought. This command works in conjunction with the `\makelabel` command so I have to redefine both of them, in addition to this, we will have to use a couple of *global* variables to pass the values from one command to the other.

When *labeling* PDF is active `\makelabel` is redefined as `\hss #1` and the only way to get the `align` key to work correctly is to redefine `\makelabel` using `\makebox`. The best way to implement this is to use the conditional command `\IfDocumentMetadataTF` to force this redefinition and the dedicated `mode-box` key to manually activate it by the user.

The `\item` and `\item[⟨custom⟩]` commands work in the usual way on `enumext` and we will add `\item*`, `\item*[⟨symbol⟩]` and `\item*[⟨symbol⟩][⟨offset⟩]`.

`\__enumext_default_item:n`

First we will see if the *optional argument* is present, if it is NOT present we will check the state of the variable `\l__enumext_check_answers_bool` set by the key `no-store`, set the boolean variable `\l__enumext_wrap_label_X_bool` to “true” for the key `wrap-label` and execute `\__enumext_item_std:w` and the key `itemindent`, otherwise we will check the state of the boolean variable `\l__enumext_wrap_label_opt_X_bool` set by the key `wrap-label*` and execute `\__enumext_item_std:w` with the *optional argument* and the key `itemindent`.

```

3478 \cs_new_protected:Npn \__enumext_default_item:n #1
3479 {
3480     \tl_if_novalue:nTF {#1}
3481     {
3482         \bool_if:NT \l__enumext_check_answers_bool
3483         {
3484             \int_gincr:N \g__enumext_item_number_int
3485             \bool_set_true:N \l__enumext_item_number_bool
3486         }
3487         \bool_set_true:c { l__enumext_wrap_label_ \__enumext_level: _bool }
3488         \__enumext_item_std:w \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl }
3489     }
3490     {
3491         \bool_set_eq:cc
3492         { l__enumext_wrap_label_ \__enumext_level: _bool }
3493         { l__enumext_wrap_label_opt_ \__enumext_level: _bool }
3494         \__enumext_item_std:w [ #1 ] \tl_use:c { l__enumext_fake_item_indent_ \__enumext_level: _tl }
3495     }
3496 }

```

(End of definition for `\__enumext_default_item:n`.)

`\__enumext_item_starred_exec:nn`

`\__enumext_item_starred_exec:`

The `\item*`, `\item*[⟨symbol⟩]` and `\item*[⟨symbol⟩][⟨offset⟩]` works like the *numbered* `\item`, but placing a `⟨symbol⟩` to the “left” of the “*label*” separated from it by the value the second *optional argument* `⟨offset⟩`.

`#1: \l__enumext_item_symbol_X_tl`

`#2: \l__enumext_item_symbol_sep_X_dim`

First we will make a copy of `\l__enumext_item_symbol_X_tl` which is set by the key `item-sym*` or passed as “*first*” *optional argument* in the global variable `\g__enumext_item_symbol_aux_tl`, followed by setting the variable `\l__enumext_item_symbol_sep_X_dim` set by the key `item-pos*` or by the “*second*” *optional argument*, then we will see the state of the variable `\l__enumext_check_answers_bool` set by the key `no-store`, set the boolean variable `\l__enumext_wrap_label_X_bool` to “true” for the key `wrap-label` and execute `\__enumext_item_std:w` and the key `itemindent`.

```

3497 \cs_new_protected:Npn \__enumext_item_starred_exec:nn #1 #2
3498 {
3499     \tl_if_novalue:nTF {#1}

```

```

3500     {
3501         \tl_gset_eq:Nc

3571         }
3572         { ##1 }
3573         \tl_use:c { l__enumext_label_fill_right_ \__enumext_level: _tl }
3574         \tl_gclear:N \g__enumext_item_symbol_aux_tl
3575     }
3576 }

```

Definition using `\makebox` when `\DocumentMetadata` is active or `mode-box` is active.

- Here it is necessary to use `\strut\smash` to maintain text *alignment* in case the user wants to use `\labelbx` for example. In my experiments with *mimicking* the `description` environment it was the only way out and it seems to have no adverse effects and may serve in the future as a basis for a more generic `list` environment package than `enumext`.

```

3577 \cs_new_protected:Nn \__enumext_make_label_box:
3578 {
3579     \RenewDocumentCommand \makeLabel { m }
3580     {
3581         \strut\smash
3582         {
3583             \makebox
3584             [ \dim_use:c { l__enumext_labelwidth_ \__enumext_level: _dim } ]
3585             [ \str_use:c { l__enumext_align_label_pos_ \__enumext_level: _str } ]
3586             {
3587                 \__enumext_item_starred_exec:
3588                 \tl_use:c { l__enumext_label_font_style_ \__enumext_level: _tl }
3589                 \bool_if:cTF { l__enumext_wrap_label_ \__enumext_level: _bool }
3590                 {
3591                     \use:c { __enumext_wrapper_label_ \__enumext_level: :n } { ##1 }
3592                 }
3593                 { ##1 }
3594                 \tl_gclear:N \g__enumext_item_symbol_aux_tl
3595             }
3596         } % close smash
3597     }
3598 }

```

(End of definition for `\__enumext_make_label:`, `\__enumext_make_label_std:`, and `\__enumext_make_label_box:`.)

### 13.38 Setting `item-sym*` and `item-pos*` keys

In order to have a cleaner implementation of `\item*` for the `enumext` and `enumext*` environments it is best to define a couple of keys that allow us to control and set by default the `<symbol>` and its `<offset>`.

```

item-sym* Define and set item-sym* and item-pos* keys for enumext and enumext*.
item-pos*
3599 \cs_set_protected:Npn \__enumext_tmp:nn #1 #2
3600 {
3601     \keys_define:nn { enumext / #1 }
3602     {
3603         item-sym* .tl_set:c = { l__enumext_item_symbol_#2_tl },
3604         item-sym* .value_required:n = true,
3605         item-sym* .initial:n = {\textborn},
3606         item-pos* .dim_set:c = { l__enumext_item_symbol_sep_#2_dim },
3607         item-pos* .value_required:n = true,
3608     }
3609 }
3610 \clist_map_inline:nn
3611 {

```

```

3612     {level-1}{i}, {level-2}{ii}, {level-3}{iii}, {level-4}{iv}, {enumext*}{vii}
3613   }
3614   { \__enumext_tmp:nn #1 }

```

(End of definition for *item-sym\** and *item-pos\**.)

### 13.39 Handling unknown keys

At this point in the code I already know that I will NOT add more *⟨keys⟩* for and since I have already been quite *paranoid and restrictive* with the definitions of environments and commands, the only thing left to do is do it with the *⟨keys⟩* (you have to be consistent in life).

- Well, the paragraph above is not so real, after all I had to add more *⟨keys⟩* than I had planned, not everything turns out the way one thinks in life.

#### 13.39.1 Handling unknown keys for keyans, keyans\* and keyanspic

Define and set *unknown* key for *keyans*, *keyans\** and *keyanspic* environments. Here it is necessary to set *\l\_\_enumext\_envir\_name\_tl* in case an *unknown* key is passed using *\setenumext*.

```

unknown
\__enumext_keyans_unknown_keys:n
\__enumext_keyans_unknown_keys:nn
3615 \cs_set_protected:Npn \__enumext_tmp:n #1
3616 {
3617   \keys_define:nn { enumext / #1 }
3618   {
3619     unknown .code:n = {
3620       \tl_set:Nn \l__enumext_envir_name_tl {#1}
3621       \__enumext_keyans_unknown_keys:n {##1}
3622     },
3623   }
3624 }
3625 \clist_map_inline:nn { keyans, keyans*, keyanspic } { \__enumext_tmp:n {#1} }

```

Internal functions for handling *unknown* key.

```

3626 \cs_new_protected:Npn \__enumext_keyans_unknown_keys:n #1
3627 {
3628   \exp_args:NV \__enumext_keyans_unknown_keys:nn \l_keys_key_str {#1}
3629 }
3630 \cs_new_protected:Npn \__enumext_keyans_unknown_keys:nn #1#2
3631 {
3632   \tl_if_blank:nTF {#2}
3633   {
3634     \msg_error:nne { enumext } { keyans-unknown-key } {#1}
3635   }
3636   {
3637     \msg_error:nnee { enumext } { keyans-unknown-key-value } {#1} {#2}
3638   }
3639 }

```

(End of definition for *unknown*, *\\_\_enumext\_keyans\_unknown\_keys:n*, and *\\_\_enumext\_keyans\_unknown\_keys:nn*.)

#### 13.39.2 Handling unknown keys for enumext\*

Define and set *unknown* key for *enumext\** environment.

```

unknown
\__enumext_starred_unknown_keys:n
\__enumext_starred_unknown_keys:nn
3640 \keys_define:nn { enumext / enumext* }
3641 {
3642   unknown .code:n = {
3643     \tl_set:Nn \l__enumext_envir_name_tl { enumext* }
3644     \__enumext_starred_unknown_keys:n {#1}
3645   },
3646 }

```

Internal functions for handling *unknown* key.

```

3647 \cs_new_protected:Npn \__enumext_starred_unknown_keys:n #1
3648 {
3649   \exp_args:NV \__enumext_starred_unknown_keys:nn \l_keys_key_str {#1}
3650 }
3651 \cs_new_protected:Npn \__enumext_starred_unknown_keys:nn #1#2
3652 {
3653   \tl_if_blank:nTF {#2}
3654   {
3655     \msg_error:nne { enumext } { starred-unknown-key } {#1}
3656   }
3657   {
3658     \msg_error:nnee { enumext } { starred-unknown-key-value } {#1} {#2}
3659   }
3660 }

```

(End of definition for *unknown*, *\\_\_enumext\_starred\_unknown\_keys:n*, and *\\_\_enumext\_starred\_unknown\_keys:nn*.)

### 13.39.3 Handling unknown keys for enumext

unknown Defines and set the key `unknown` for `enumext` environment.

```

3661 \cs_set_protected:Npn \__enumext_tmp:n #1
3662 {
3663   \keys_define:nn { enumext / level-#1 }
3664   {
3665     unknown .code:n = {
3666       \int_set:Nn \__enumext_level_int { #1 }
3667       \tl_set:Nn \__enumext_envir_name_tl { enumext }
3668       \__enumext_standar_unknown_keys:n {##1}
3669     },
3670   }
3671 }
3672 \clist_map_inline:nn {1, 2, 3, 4} { \__enumext_tmp:n {#1} }

```

Internal functions for handling `unknown` key.

```

3673 \cs_new_protected:Npn \__enumext_standar_unknown_keys:n #1
3674 {
3675   \exp_args:NV \__enumext_standar_unknown_keys:nn \l_keys_key_str {#1}
3676 }
3677 \cs_new_protected:Npn \__enumext_standar_unknown_keys:nn #1#2
3678 {
3679   \tl_if_blank:nTF {#2}
3680   {
3681     \msg_error:nne { enumext } { standar-unknown-key } {#1}
3682   }
3683   {
3684     \msg_error:nnee { enumext } { standar-unknown-key-value } {#1} {#2}
3685   }
3686 }

```

(End of definition for `unknown`, `\__enumext_standar_unknown_keys:n`, and `\__enumext_standar_unknown_keys:nn`.)

### 13.40 Redefining `\item` and `\makeLabel` in keyans

The `\item` and `\item[⟨custom⟩]` commands work in the usual way in `keyans`, but the `\item*` and `\item*[⟨content⟩]` commands *store* the current *⟨label⟩* next to the *⟨content⟩* if it is present in the *sequence* and *prop list* defined by `save-ans` key.

`\__enumext_keyans_default_item:n` The function `\__enumext_keyans_default_item:n` executes the original behavior of the `\item` along with the keys `wrap-label`, `wrap-label*` and `itemindent`.

```

3687 \cs_new_protected:Npn \__enumext_keyans_default_item:n #1
3688 {
3689   \tl_if_novalue:nTF { #1 }
3690   {
3691     \bool_set_true:N \__enumext_wrap_label_v_bool
3692     \__enumext_item_std:w \tl_use:N \__enumext_fake_item_indent_v_tl
3693   }
3694   {
3695     \bool_set_eq:NN \__enumext_wrap_label_v_bool \__enumext_wrap_label_opt_v_bool
3696     \__enumext_item_std:w [#1] \tl_use:N \__enumext_fake_item_indent_v_tl
3697   }
3698 }

```

(End of definition for `\__enumext_keyans_default_item:n`.)

`\__enumext_keyans_starred_item:n` The function `\__enumext_keyans_starred_item:n` will take as argument *#1* the *optional argument* [*⟨content⟩*] passed to `\item*` and save it via the `\__enumext_keyans_save_item_opt:n` function, then activate the `wrap-label` key, execute `\item` using `\__enumext_item_std:w`, the `itemindent` key and print the *optional argument* using the `\__enumext_keyans_show_item_opt:` function handled by the `wrap-opt` key.

```

3699 \cs_new_protected:Npn \__enumext_keyans_starred_item:n #1
3700 {
3701   \__enumext_keyans_save_item_opt:n { #1 }
3702   \bool_set_true:N \__enumext_wrap_label_v_bool
3703   \__enumext_item_std:w \tl_use:N \__enumext_fake_item_indent_v_tl
3704   \__enumext_keyans_show_item_opt:

```

Now *store* the current *⟨label⟩* first in the *prop list* (including the *optional argument*), run the internal “*label and ref*” system if the `save-ref` key is active, then *store* in the *sequence* and finally increments `\g__enumext_check_starred_cmd_int` for internal check system.

```

3705   \__enumext_keyans_addto_prop:n { #1 }

```

```

3706     \__enumext_keyans_store_ref:
3707     \__enumext_keyans_addto_seq:n { #1 }
3708     \int_gincr:N \__enumext_check_starred_cmd_int
3709 }

```

(End of definition for \\_\_enumext\_keyans\_starred\_item:n)

\item\*  
 \\_\_enumext\_keyans\_redefine\_item:

The function \\_\_enumext\_keyans\_redefine\_item: is responsible for adding the *starred argument* and *optional argument* by the \\_\_enumext\_list\_arg\_two\_v: function in the definition of the *keyans* environment. Here we will set to true the variable \l\_\_enumext\_item\_wrap\_key\_bool used by the *wrap-ans\** key only when \item\* is executed and additionally we need to use \peek\_remove\_spaces:n to avoid an unwanted space when using \item\* together with the *itemindent* key. This function are passed to \\_\_enumext\_list\_arg\_two\_v: used in the definition of the *keyans* environment (§13.41).

```

3710 \cs_new_protected:Nn \__enumext_keyans_redefine_item:
3711 {
3712     \RenewDocumentCommand \item { s o }
3713     {
3714         \bool_if:nTF {##1}
3715         {
3716             \bool_set_true:N \l__enumext_item_wrap_key_bool % wrap-ans*
3717             \peek_remove_spaces:n
3718             {
3719                 \__enumext_keyans_starred_item:n {##2}
3720             }
3721         }
3722         {
3723             \bool_set_false:N \l__enumext_item_wrap_key_bool
3724             \__enumext_keyans_default_item:n {##2}
3725         }
3726     }
3727 }

```

(End of definition for \item\* and \\_\_enumext\_keyans\_redefine\_item:. This function is documented on page 17.)

\\_\_enumext\_keyans\_make\_label:  
 \\_\_enumext\_keyans\_wrapper\_label:n  
 \\_\_enumext\_keyans\_make\_label\_std:  
 \\_\_enumext\_keyans\_make\_label\_box:

The function \\_\_enumext\_keyans\_make\_label: redefine \makelabel for the keys *mode-box*, *align*, *font*, *wrap-label*, *wrap-label\**, *wrap-ans\** and \item\* for *keyans* environment. This function are passed to \\_\_enumext\_list\_arg\_two\_v: used in the definition of the *keyans* environment (§13.41).

```

3728 \cs_new_protected:Nn \__enumext_keyans_make_label:
3729 {
3730     \IfDocumentMetadataTF
3731     {

3787         }
3788     }
3789 }

```

(End of definition for `\__enumext_keyans_make_label:` and others.)

### 13.41 Second argument of the lists

At this point in the code we have already programmed most of the tools needed to create a *custom list* environment, remember that the `\__enumext_start_list:nn` function takes two arguments, we have the “first” one ready, the “second” one we will define for all levels of the `enumext` environment, the `keyans` environment and the `enumext*` and `keyans*` environments.

Here we will implement the `\__enumext_list_arg_two_X:` function, which will be responsible for setting all the list parameters, the counter, the redefinition of `\item`, `\makeLabel` along with the keys `ref`, `itemindent` and `show-length`.

#### 13.41.1 Calculation of `\leftmargin` and `\itemindent`

Consider the figure 9 where the default margins (on the left) of a list are represented.

Figure 9: Representation of standard horizontal lengths in `list` environment.

The idea is to have control over these margins so that our list does not overlap the left margin of the page. The *key* relationship is that the “right edge” of the `\labelsep` equals the “right edge” of the `\itemindent`, so that the left edge of the “label box” is at `\leftmargin + \itemindent` minus `\labelwidth + \labelsep`. Thus, the handling of the margins by the package will be as shown in the figure 10.

Figure 10: Representation of horizontal lengths concept in list in `enumext`.

Where the default values will look like in the figure 11.

Figure 11: Default horizontal lengths in enumext.

```
\__enumext_calc_hspace:NNNNNNN
\__enumext_calc_hspace:ccccccc
```

The function `\__enumext_calc_hspace:NNNNNNN` takes seven arguments to be able to determine horizontal spaces for all list environment:

```
#1: \__enumext_labelwidth_X_dim      #2: \__enumext_labelsep_X_dim
#3: \__enumext_listoffset_X_dim      #4: \__enumext_leftmargin_tmp_X_dim
#5: \__enumext_leftmargin_X_dim      #6: \__enumext_itemindent_X_dim
#7: \__enumext_leftmargin_tmp_X_bool
```

And returns the “adjusted” values of `\leftmargin` and `\itemindent`.

```
3790 \cs_new_protected:Npn \__enumext_calc_hspace:NNNNNNN #1 #2 #3 #4 #5 #6 #7
3791 {
3792   \dim_compare:nNt { #1 } < { \c_zero_dim }
3793   {
3794     \msg_warning:nnnV { enumext } { width-non-positive } { labelwidth } #1
3795     \dim_set:Nn #1 { \dim_abs:n { #1 } }
3796   }
3797   \dim_compare:nNt { #2 } < { \c_zero_dim }
3798   {
3799     \msg_warning:nnnV { enumext } { width-negative } { labelsep } #2
3800     \dim_set:Nn #2 { \dim_abs:n { #2 } }
3801   }
}
```

If no value has been passed to the `labelwidth` and `labelsep` keys we set the default values for `\__enumext_leftmargin_tmp_X_dim`.

```
3802   \bool_if:NF #7 { \dim_set:Nn #4 { #1 + #2 } }
```

We now analyze the cases and set the values for `\leftmargin` and `\itemindent`.

```
3803   \dim_compare:nNtF { #4 } < { \c_zero_dim }
3804   {
3805     \dim_set:Nn #6 { #1 + #2 - #4 }
3806     \dim_set:Nn #5 { #1 + #2 + #3 - #6 }
3807   }
3808   {
3809     \dim_compare:nNt { #4 } = { #1 + #2 }
3810     { \dim_set:Nn #6 { \c_zero_dim } }
3811     \dim_compare:nNt { #4 } < { #1 + #2 }
3812     { \dim_set:Nn #6 { #1 + #2 - #4 } }
3813     \dim_compare:nNt { #4 } > { #1 + #2 }
3814     {

### 13.41.2 Setting second argument of the lists

We will “not set” `\leftmargini`, `\leftmarginii`, `\leftmarginiii` or `\leftmarginiv`, in this case, we will directly set the parameters for vertical and horizontal list spacing per level.

```
3822 \cs_set_protected:Npn \__enumext_tmp:n #1
3823 {
3824   \cs_new_protected:cpn { __enumext_list_arg_two_#1: }
3825   {
3826     \__enumext_calc_hspace:ccccccc
3827     { \__enumext_labelwidth_#1_dim } { \__enumext_labelsep_#1_dim }
3828     { \__enumext_listoffset_#1_dim } { \__enumext_leftmargin_tmp_#1_dim }
3829     { \__enumext_leftmargin_#1_dim } { \__enumext_itemindent_#1_dim }
3830     { \__enumext_leftmargin_tmp_#1_bool }
```

```

3831 \clist_map_inline:nn
3832 { labelsep, labelwidth, itemindent, leftmargin, rightmargin, listparindent }
3833 { \dim_set_eq:cc {####1} { \__enumext_####1_#1_dim } }
3834 \clist_map_inline:nn { topsep, parsep, partopsep, itemsep }
3835 { \skip_set_eq:cc {####1} { \__enumext_####1_#1_skip } }
3836 \clist_map_inline:nn { beginparpenalty, itempenalty, endparpenalty }
3837 { \int_set_eq:cc {@####1} { \__enumext_####1_#1_int } }
3838 \usecounter { enumX#1 }

3860   }
3861 }
3862 }
3863 }
3864 \clist_map_inline:nn { i, ii, iii, iv, v } { \__enumext_tmp:n {#1} }

```

(End of definition for `\__enumext_list_arg_two_i:` and others.)

`\__enumext_list_arg_two_vii:` For the horizontal environments `enumext*` and `keyans*` the implementation is similar, but, the value of `\partopsep` is always `\opt`. At this point we will modify the `parsep` key to make it take the value of the `itemsep` key and later, in the environment definition, we will modify `parindent` to make it set the value of `\listparindent` and `parsep` to set the value of `\parskip` locally.

- For compatibility with *tagged* PDF and L<sup>A</sup>T<sub>E</sub>X release 2026-06-01 we will move `\setcounter` to `\begin{list}`{*(arg one)*}{*(arg two)*}{`\setcounter`} in the definition of the environments `enumext*` and `keyans*` (see §13.47 and §13.48). This resolves the nesting problem reported by @teepeeemm in `enumext*` nested in `enumext` starts at 2 with DocumentMetadata this was caused by the `latex-lab-block`[19] update in this release.

```

3865 \cs_set_protected:Npn \__enumext_tmp:n #1

4011         \end{multicols}
4012         \__enumext_unskip_unkern:
4013         \__enumext_unskip_unkern:
4014         \par\addvspace{ \skip_use:c { \__enumext_multicols_below_ \__enumext_level: _skip } }
4015     }
4016     {
4017         \__enumext_stop_list:
4018         \__enumext_stop_store_level:
4019     }
4020 }

```

(End of definition for `\__enumext_multicols_stop:`)

`\__enumext_before_list:` The function `\__enumext_before_list:` first calls the function `\__enumext_vspace_above:` used by the keys `above` and `above*`, then calls the function `\__enumext_before_args_exec:` used by the key `before*` and finally execute the function `\__enumext_check_ans_active:` for the check answer mechanism.

```

4021 \cs_new_protected:Nn \__enumext_before_list:
4022 {
4023     \__enumext_vspace_above:
4024     \__enumext_before_args_exec:
4025     \__enumext_check_ans_active:

```

When the `mini-env` key is active it will set the value of the `\l__enumext_minipage_right_X_dim` to be the *width* of the `\__enumext_mini_page` environment on the “*right side*”, using this value together with the value of the `\l__enumext_minipage_hsep_X_dim` set by the `mini-sep` key, the value of `\l__enumext_minipage_left_X_dim` will be set, which will be the *width* of `\__enumext_mini_page` environment on the “*left side*”, always having a current `\linewidth` as *maximum width* between them.

```

4026     \dim_compare:nNnT
4027     { \dim_use:c { \l__enumext_minipage_right_ \__enumext_level: _dim } } > { \c_zero_dim }
4028     {
4029         \dim_set:cn { \l__enumext_minipage_left_ \__enumext_level: _dim }
4030         {
4031             \linewidth
4032             - \dim_use:c { \l__enumext_minipage_right_ \__enumext_level: _dim }
4033             - \dim_use:c { \l__enumext_minipage_hsep_ \__enumext_level: _dim }
4034         }

```

The boolean variable `\l__enumext_minipage_active_X_bool` will be activated and the integer variable `\g__enumext_minipage_stat_int` used by the `\miniright` command will be incremented, then the function `\__enumext_minipage_add_space:` is called and the `\__enumext_mini_page` environment on the “*left side*” will be initialized followed by the “*vertical spacing*” applied to preserve the “*baseline*” between the *left* and *right* side environments. After these actions, the function `\__enumext_multicols_start:` is called to handle the `multicols` environment.

```

4035     \bool_set_true:c { \l__enumext_minipage_active_ \__enumext_level: _bool }
4036     \int_gincr:N \g__enumext_minipage_stat_int
4037     \__enumext_minipage_add_space:

```

```

4038         \noindent
4039         \__enumext_mini_page{ \dim_use:c { \__enumext_minipage_left_ \__enumext_level: _dim } }
4040     }
4041     \__enumext_multicols_start:
4042 }

```

(End of definition for \\_\_enumext\_before\_list:.)

\\_\_enumext\_second\_part: The function \\_\_enumext\_second\_part: first check the state of the boolean variable \l\_\_enumext\_minipage\_active\_X\_bool, if it is “true” a small test will be executed to check if we have omitted the use of \miniright (the \\_\_enumext\_mini\_page environment has not been closed), then close \\_\_enumext\_mini\_page and add the *adjusted vertical space* \l\_\_enumext\_minipage\_after\_skip, otherwise we will close the multicols environment.

```

4043 \cs_new_protected:Nn \__enumext_second_part:
4044 {
4045     \bool_if:cTF { \__enumext_minipage_active_ \__enumext_level: _bool }
4046     {
4047         \int_compare:nNt { \g__enumext_minipage_stat_int } = { 1 }
4048         {
4049             \msg_warning:nn { enumext } { missing-miniright }
4050             \miniright
4051         }
4052         \int_gzero:N \g__enumext_minipage_stat_int
4053         \__enumext_unskip_unkern: % remove topsep + [partopsep]
4054         \end__enumext_mini_page
4055     }
4056     {
4057         \__enumext_multicols_stop:
4058     }

```

Now we will execute the functions \\_\_enumext\_after\_stop\_list: used by the key `after`, \\_\_enumext\_check\_ans\_key\_hook: used by the key `check-ans`, \\_\_enumext\_vspace\_below: used by the keys `below` and `below*`. Finally set \l\_\_enumext\_standar\_bool to false and call the function \\_\_enumext\_resume\_save\_counter: used by the `series`, `resume` and `resume*` keys.

```

4059     \__enumext_after_stop_list:
4060     \__enumext_check_ans_key_hook:
4061     \__enumext_vspace_below:
4062     \bool_set_false:N \l__enumext_standar_bool
4063     \bool_if:NF \l__enumext_print_keyans_cmd_bool
4064     {
4065         \__enumext_standar_save_counter:
4066     }
4067 }

```

(End of definition for \\_\_enumext\_second\_part:.)

\\_\_enumext\_set\_item\_width: The function \\_\_enumext\_set\_item\_width: will set the value of \itemwidth taking into account the value established by the `list-offset` key for each level of the environment.

```

4068 \cs_new_protected:Nn \__enumext_set_item_width:
4069 {
4070     \dim_set:Nn \itemwidth { \linewidth }
4071     \dim_compare:nT
4072     {
4073         \dim_use:c { \__enumext_listoffset_ \__enumext_level: _dim } != \c_zero_dim
4074     }
4075     {
4076         \dim_sub:Nn \itemwidth
4077         {
4078             \dim_use:c { \__enumext_listoffset_ \__enumext_level: _dim }
4079         }
4080     }
4081 }

```

(End of definition for \\_\_enumext\_set\_item\_width:.)

**enumext** Now create the `enumext` environment based on `list` environment by levels.

```

4082 \NewDocumentEnvironment{enumext}{0}{ }
4083 {
4084     \__enumext_safe_exec:
4085     \__enumext_parse_keys:n {#1}
4086     \__enumext_before_list:

```

```

4087   \__enumext_start_store_level:
4088   \__enumext_start_list:nn
4089   { \tl_use:c { l__enumext_label_ \__enumext_level: _tl } }
4090   {
4091     \use:c { __enumext_list_arg_two_ \__enumext_level: : }
4092     \__enumext_before_keys_exec:
4093   }
4094   \__enumext_set_item_width:
4095   \__enumext_after_args_exec:
4096 }
4097 {
4098   \__enumext_second_part:
4099 }

```

(End of definition for `enumext`. This function is documented on page 5.)

As we don't want our check to be executed `check-ans` by levels but on the complete list, we will take it out of the `enumext` environment using the “hook” function `\__enumext_after_env:nn`.

```

4100 \__enumext_after_env:nn {enumext}
4101 {
4102   \__enumext_execute_after_env:
4103 }

```

### 13.43 The environment `keyans`

The environment `keyans` also based on lists. The main differences with the `enumext` environment are the *nesting* and the way the *answers* (choice) will be stored and checked, this environment is intended exclusively for “multiple choice questions”.

The `keyans` environment will only be available if the `save-ans` key is active and can only be used at the “first level” within the `enumext` environment. We do not want the environment to be nested, so we will set a maximum at this point. If the conditions are not met, an error message will be returned.

```

4104 \cs_new_protected:Nn \__enumext_keyans_safe_exec:
4105 {
4106   \bool_if:NF \l__enumext_store_active_bool

4210       \l__enumext_listoffset_v_dim != \c_zero_dim
4211     }
4212   {
4213     \dim_sub:Nn \itemwidth { \l__enumext_listoffset_v_dim }
4214   }
4215 }

```

(End of definition for `\__enumext_keyans_set_item_width:`.)

**keyans** Now we define the environment `keyans` also based on lists.

```

4216 \NewDocumentEnvironment{keyans}{ 0{} }
4217 {
4218   \__enumext_keyans_safe_exec:
4219   \__enumext_keyans_parse_keys:n {#1}
4220   \__enumext_before_list_v:
4221   \__enumext_start_list:nn
4222     { \tl_use:N \l__enumext_label_v_tl }
4223     {
4224       \__enumext_list_arg_two_v:
4225       \__enumext_before_keys_exec_v:
4226     }
4227   \__enumext_keyans_set_item_width:
4228   \__enumext_after_args_exec_v:
4229 }
4230 {
4231   \__enumext_check_starred_cmd:n { item }
4232   \__enumext_second_part_v:
4233 }

```

(End of definition for `keyans`. This function is documented on page 16.)

### 13.44 Tagging PDF support for non-standart list environments

The  $\TeX$  release 2022-06-01 brings automatic support for *tagged* PDF in several aspects, including the standard *list environments* and the `list` environment. Unfortunately non-standard *list environments* like `keyanspic` or the horizontal list environments `enumext*` and `keyans*` are not structured in a nice way, i.e. the expected result in the PDF file is the expected one, but the underlying structure is not correct. In simple terms, for *tagged* PDF a `list` environment is a `list` environment, no matter what it looks like in the PDF file.

To maintain a correct `list` structure when `\DocumentMetadata` is active, it is necessary to do some things manually using `tagpdf`[18] and `ltsockets`[20]. This implementation is an adaptation of my answer thanks to Ulrike Fischer's comments in [How can I modify my \item redefinition to be compatible with tagging-pdf](#).

#### 13.44.1 Socket for tagging support in `enumext*` and `keyans*`

We will first define the necessary sockets and their behavior for `enumext*` and `keyans*`.

```

start-list-tags
stop-start-tags
stop-list-tags
\__enumext_start_list_tag:n
  \__enumext_stop_start_list_tag:
  \__enumext_stop_list_tag:n
4234 \socket_new:nn {tagsupport/\__enumext/starred}{ 1 }
4235 \socket_new_plug:nnn {tagsupport/\__enumext/starred} {start-list-tags}
4236 {
4237   \tag_resume:n {#1}
4238   \tag_struct_begin:n {tag=LI}
4239   \tag_struct_begin:n {tag=Lbl}
4240   \tag_mc_begin:n {tag=Lbl}
4241 }
4242 \socket_new_plug:nnn {tagsupport/\__enumext/starred} {stop-start-tags}
4243 {
4244   \tag_mc_end:
4245   \tag_struct_end:n {tag=Lbl}
4246   \tag_struct_begin:n {tag=LBody}
4247   \tag_struct_begin:n {tag=text-unit}
4248   \tag_struct_begin:n {tag=text}
4249 }
4250 \socket_new_plug:nnn {tagsupport/\__enumext/starred} {stop-list-tags}
4251 {
4252   \tag_struct_end:n {tag=text}
4253   \tag_struct_end:n {tag=text-unit}

```

```

4254         \tag_struct_end:n {tag=LBody}
4255     \tag_struct_end:n {tag=LI}
4256     \tag_suspend:n {#1}
4257 }

```

And now we'll wrap them so that they're only active when `\DocumentMetadata` is present.

```

4258 \cs_new_protected_nopar:Npn \__enumext_start_list_tag:n #1
4259 {
4260     \IfDocumentMetadataT
4261     {
4262         \socket_assign_plug:nn {tagsupport/__enumext/starred} {start-list-tags}
4263         \socket_use:nn {tagsupport/__enumext/starred} {#1}
4264     }
4265 }
4266 \cs_new_protected_nopar:Nn \__enumext_stop_start_list_tag:
4267 {
4268     \IfDocumentMetadataT
4269     {
4270         \socket_assign_plug:nn {tagsupport/__enumext/starred} {stop-start-tags}
4271         \socket_use:nn {tagsupport/__enumext/starred} { }
4272     }
4273 }
4274 \cs_new_protected_nopar:Npn \__enumext_stop_list_tag:n #1
4275 {
4276     \IfDocumentMetadataT
4277     {
4278         \socket_assign_plug:nn {tagsupport/__enumext/starred} {stop-list-tags}
4279         \socket_use:nn {tagsupport/__enumext/starred} {#1}
4280     }
4281 }

```

*(End of definition for start-list-tags and others.)*

### 13.44.2 Socket for tagging support in keyanspic

`start-list-tags` We will first define the necessary sockets and their behavior for `keyanspic` environment.

```

stop-start-tags
stop-list-tags
\__enumext_anspic_start_list_tag:
\__enumext_anspic_stop_start_list_tag:
\__enumext_anspic_stop_list_tag:
4282 \socket_new:nn {tagsupport/__enumext/keyanspic}{ 0 }
4283 \socket_new_plug:nnn {tagsupport/__enumext/keyanspic} {start-list-tags}
4284 {
4285     \tag_resume:n {keyanspic}
4286     \tag_struct_begin:n {tag=LI}
4287     \tag_struct_begin:n {tag=Lbl}
4288     \tag_mc_begin:n {tag=Lbl}
4289 }
4290 \socket_new_plug:nnn {tagsupport/__enumext/keyanspic} {stop-start-tags}
4291 {
4292     \tag_mc_end:
4293     \tag_struct_end:n {tag=Lbl}
4294     \tag_struct_begin:n {tag=LBody}
4295     \tag_struct_begin:n {tag=text-unit}
4296     \tag_struct_begin:n {tag=text}
4297     \tag_mc_begin:n {tag=text}
4298 }
4299 \socket_new_plug:nnn {tagsupport/__enumext/keyanspic} {stop-list-tags}
4300 {
4301     \tag_mc_end:
4302     \tag_struct_end:n {tag=text}
4303     \tag_struct_end:n {tag=text-unit}
4304     \tag_struct_end:n {tag=LBody}
4305     \tag_struct_end:n {tag=LI}
4306     \tag_suspend:n {keyanspic}
4307 }

```

And now we'll wrap them so that they're only active when `\DocumentMetadata` is present.

```

4308 \cs_new_protected_nopar:Nn \__enumext_anspic_start_list_tag:
4309 {
4310     \IfDocumentMetadataT
4311     {
4312         \socket_assign_plug:nn {tagsupport/__enumext/keyanspic} {start-list-tags}
4313         \socket_use:n {tagsupport/__enumext/keyanspic}
4314     }
4315 }
4316 \cs_new_protected_nopar:Nn \__enumext_anspic_stop_start_list_tag:

```

```

4317 {
4318   \IfDocumentMetadataT
4319   {
4320     \socket_assign_plug:nn {tagsupport/__enumext/keyanspic} {stop-start-tags}
4321     \socket_use:n {tagsupport/__enumext/keyanspic}
4322   }
4323 }
4324 \cs_new_protected_nopar:Nn \__enumext_anspic_stop_list_tag:
4325 {
4326   \IfDocumentMetadataT
4327   {
4328     \socket_assign_plug:nn {tagsupport/__enumext/keyanspic} {stop-list-tags}
4329     \socket_use:n {tagsupport/__enumext/keyanspic}
4330   }
4331 }

```

(End of definition for `start-list-tags` and others.)

### 13.45 The environment `keyanspic` and `\anspic`

The `keyanspic` environment is a `list` based environment that uses the same configuration for “*spacing*” and *⟨label⟩* as the `keyans` environment, but it does not use `\item`. The *⟨contents⟩* are passed to the environment by means of the `\anspic` command as replacement for `\item` command and placed inside `minipage` environments, with the *⟨label⟩* centered “*above*” or “*below*”, adjusting *widths* and *position* according to the options passed to the environment.

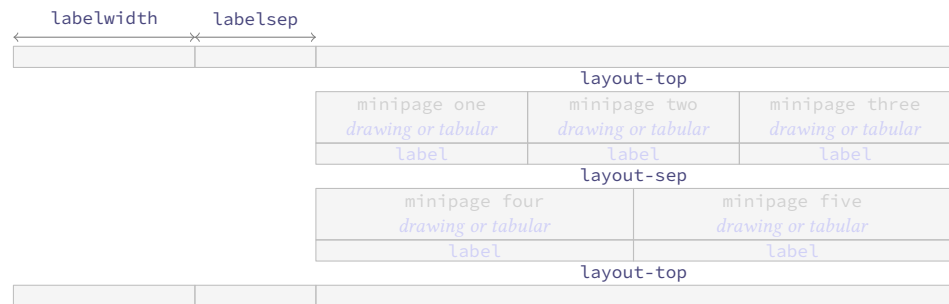

Figure 12: Representation of the `keyanspic` spacing in `enumext`.

In order for the `keyanspic` environment and the `\anspic` command to work correctly, we need to set and export some variables in the first part of the environment definition and pass them to `\anspic` which is executed in the second part of the environment. This implementation is adapted from the answer given by Enrico Gregorio (@egreg) in [How to process the body of an environment and divide it by a \macro?](#).

#### 13.45.1 The environment `keyanspic`

First we define the keys that allows us to process the position of the *⟨label⟩* centered “*above*” or “*below*” which will be `label-pos`, the vertical separation of these from *drawing or tabular* will be handled with the key `label-sep`. The “*layout style*” will be handled with the key `layout-sty` will take two values separated by comma *{⟨n° upper; n° lower⟩}* and will determine the number of `minipage` environments in which all arguments of `\anspic` will be printed at the “*upper*” and “*lower*” within the environments separated by the value of the key `layout-sep`. The vertical space “*top*” and “*bottom*” of the environment will be handled with the key `layout-top`.

```

label-pos  First we define the keys that allows us to process the position of the ⟨label⟩ centered “above” or “below” which
label-sep  will be label-pos, the vertical separation of these from drawing or tabular will be handled with the key
layout-sty label-sep. The “layout style” will be handled with the key layout-sty will take two values separated
layout-sep by comma {⟨n° upper; n° lower⟩} and will determine the number of minipage environments in which all
layout-top arguments of \anspic will be printed at the “upper” and “lower” within the environments separated by the
mark-ans   value of the key layout-sep. The vertical space “top” and “bottom” of the environment will be handled with
mark-pos   the key layout-top.

4369 show-pos   .value_required:n = true,
4370 unknown    .code:n          = {
4371                                     \tl_set:Nn \l__enumext_envir_name_tl { keyanspic }
4372                                     \__enumext_keyans_unknown_keys:n {#1}
4373                                 },
4374 }

```

(End of definition for `label-pos` and others.)

```

\__enumext_keyans_pic_safe_exec:
\__enumext_keyans_pic_parse_keys:n
\__enumext_keyans_pic_skip_abs:N
\__enumext_keyans_pic_arg_two:

```

The function `\__enumext_keyans_pic_safe_exec`: check the nested level position inside the `enumext` environment.

```

4375 \cs_new_protected:Nn \__enumext_keyans_pic_safe_exec:
4376 {
4377     \int_incr:N \l__enumext_keyans_pic_level_int
4378     \int_compare:nNnT { \l__enumext_keyans_pic_level_int } > { 1 }
4379     {
4380         \msg_error:nn { enumext } { keyanspic-nested }
4381     }
4382     \__enumext_keyans_name_and_start:
4383 }

```

Parse [`<key = val>`] for `keyanspic` environment.

```

4384 \cs_new_protected:Npn \__enumext_keyans_pic_parse_keys:n #1
4385 {
4386     \tl_if_novalue:nF {#1}
4387     {
4388         \keys_set:nn { enumext / keyanspic } {#1}
4389     }
4390 }

```

The function `\__enumext_keyans_pic_skip_abs:N` will return a positive value `\parsep` from `keyans` environment.

```

4391 \cs_new_protected:Npn \__enumext_keyans_pic_skip_abs:N #1
4392 {
4393     \dim_compare:nNnT { #1 } < { \c_zero_dim }
4394     {
4395         \skip_set:Nn #1 { -#1 }
4396     }
4397 }

```

The `\__enumext_keyans_pic_arg_two:` function will be used in the *second argument* of the `list` environment that defines the `keyanspic` environment, with this we will take the configuration of the “*spaces*” and the keys `label`, `wrap-label`, `parsep` and `topsep` from the `keyans` environment. The first thing we need to do is set the boolean variable `\l__enumext_leftmargin_tmp_v_bool` handled by the `list-indent` key to “false”, then copy the definition of the second list argument from the `keyans` environment definition and make sure that `\parsep` does not have a negative value.

```

4398 \cs_new_protected:Npn \__enumext_keyans_pic_arg_two:
4399 {
4400     \bool_set_false:N \l__enumext_leftmargin_tmp_v_bool
4401     \__enumext_list_arg_two_v:
4402     \__enumext_keyans_pic_skip_abs:N \parsep

```

Now we increment the counter `enumXv` of the `keyans` environment and save the *total height* of the *<label>* in `\l__enumext_anspic_label_htdp_dim` used by `\anspic` and we will adjust the values of `\parsep` only if the key `label-pos` is set to *below*.

```

4403 \bool_if:NF \l__enumext_anspic_label_above_bool
4404 {
4405   \stepcounter { enumXv }
4406   \hbox_set:Nn \l__enumext_anspic_label_box { \l__enumext_label_v_tl }
4407   \dim_set:Nn \l__enumext_anspic_label_htdp_dim
4408     {
4409       \box_ht_plus_dp:N \l__enumext_anspic_label_box
4410     }
4411   \skip_add:Nn \parsep
4412     {
4413       \l__enumext_anspic_label_htdp_dim
4414       + \box_dp:N \strutbox
4415       + \l__enumext_anspic_label_sep_skip
4416     }
4417 }

```

Finally we *adjust* the value of `\leftmargin` and `\topsep` then set `\listparindent`, `\partopsep` and `\itemsep` to zero so that the *horizontal* and *vertical* space is not affected.

```

4418 \dim_add:Nn \leftmargin { -\l__enumext_labelwidth_v_dim - \l__enumext_labelsep_v_dim }
4419 \ignorespaces
4420 \skip_add:Nn \topsep { 0.5\box_dp:N \strutbox }
4421 \dim_zero:N \listparindent
4422 \skip_zero:N \partopsep
4423 \skip_zero:N \itemsep
4424 }

```

(End of definition for `\__enumext_keyans_pic_safe_exec`: and others.)

**keyanspic** Now we define the environment `keyanspic`. For compatibility with *tagged* PDF we must use the `\begin{list}` form and a lot of conditional code using `\IfDocumentMetadataTF`. We will first stop the code for automatic *tagged* PDF for `list` environments, redefine `\item` so that it cannot be used, and stop the code for automatic *tagged* PDF for the `keyanspic` environment.

```

4425 \NewDocumentEnvironment{keyanspic}{ o }
4426 {
4427   \__enumext_keyans_pic_safe_exec:
4428   \__enumext_keyans_pic_parse_keys:n {#1}
4429   \begin{list} { } { \__enumext_keyans_pic_arg_two: }
4430   \IfDocumentMetadataT
4431     {
4432       \tag_suspend:n {list}
4433     }
4434   \item[] \scan_stop:
4435   \RenewDocumentCommand \item {}
4436     {
4437       \msg_error:nn { enumext } { keyanspic-item-cmd }
4438     }
4439   \IfDocumentMetadataT
4440     {
4441       \tag_resume:n {keyanspic}
4442       \tag_tool:n {para/tagging=false} % no socket for this now
4443       \tag_suspend:n {keyanspic}
4444     }
4445 }

```

In the second part of the environment definition we will manually place our code for *tagged* PDF and execute the command `\anspic` using the `\__enumext_anspic_exec`: function.

```

4446 {
4447   \IfDocumentMetadataT
4448     {
4449       \tag_resume:n {keyanspic}
4450     }
4451   \__enumext_anspic_exec:
4452   \IfDocumentMetadataT
4453     {
4454       \tag_suspend:n {keyanspic}
4455     }
4456   \end{list}
4457   \IfDocumentMetadataT
4458     {
4459       \tag_struct_end:n {tag=L}
4460     }

```

Finally we check if `\anspic*` has been used, set the counter `enumXvi` to zero and apply our “adjusted” vertical space bottom.

```

4461 \__enumext_check_starred_cmd:n { anspic }
4462 \setcounter { enumXvi } { 0 }
4463 \bool_if:NTF \l__enumext_anspic_label_above_bool
4464 {
4465   \par\addvspace{ 0.5\box_dp:N \strutbox }
4466 }
4467 {
4468   \par
4469   \addvspace
4470   {
4471     \dim_eval:n
4472     {
4473       \l__enumext_anspic_label_htdp_dim + \box_ht_plus_dp:N \strutbox
4474       + \l__enumext_anspic_label_sep_skip + \l__enumext_topsep_v_skip
4475     }
4476   }
4477 }
4478 }

```

(End of definition for `keyanspic`. This function is documented on page 17.)

### 13.45.2 The command `\anspic`

The `\anspic` command take three arguments, the *starred versions* `\anspic*[\langle content \rangle]` store the current `\label` next to the *optional argument* `[\langle content \rangle]` in the *sequence* and *prop list* defined by `save-ans` key. The third *mandatory argument* `{\langle drawing or tabular \rangle}` is NOT stored in the *sequence* or *prop list*.

- One of the complications here to make the `keyanspic` environment compatible with *tagged* PDF is the position of `\label`, the `\anspic` command processes the arguments in order, where #1 and #2 correspond to `\label` and #3 to the mandatory argument and puts all this inside a `minipage` environment. If #1 and #2, that is `\label`, is above #3 there are no problems with *tagged* PDF, but if #3 comes first the list created with *tagged* PDF will not be correct.

`\anspic`

We check that the command is active in the `keyanspic` environment only if the `save-ans` key is present, otherwise we return an error. The three arguments are handled by the function `\__enumext_anspic_args:nnn` and stored in the sequence `\l__enumext_anspic_args_seq` which is processed by the `keyanspic` environment.

```

4479 \NewDocumentCommand \anspic { s o +m }
4480 {
4481   \bool_if:NF \l__enumext_store_active_bool
4482   {
4483     \msg_error:nnnn { enumext } { wrong-place }{ keyanspic }{ save-ans }
4484   }
4485   \int_compare:nNnT { \l__enumext_level_int } > { 1 }
4486   {
4487     \msg_error:nn { enumext } { keyanspic-wrong-level }
4488   }
4489   \int_compare:nNnT { \l__enumext_keyans_level_int } = { 1 }
4490   {
4491     \msg_error:nnnn { enumext } { command-wrong-place }{ anspic }{ keyans }
4492   }
4493   \seq_put_right:Nn \l__enumext_anspic_args_seq
4494   {
4495     \__enumext_anspic_args:nnn { #1 } { #2 } { #3 }
4496   }
4497 }

```

The `\__enumext_anspic_body_dim:n` function will set the value of `\l__enumext_anspic_body_htdp_dim` equal to the “height plus depth” of the *mandatory argument* if the key `label-pos` is set “below”.

```

4498 \cs_new_protected:Npn \__enumext_anspic_body_dim:n #1
4499 {
4500   \bool_if:NF \l__enumext_anspic_label_above_bool
4501   {
4502     \IfDocumentMetadataT
4503     {
4504       \tag_suspend:n {keyanspic}
4505     }
4506     \vbox_set:Nn \l__enumext_anspic_body_box { #1 }
4507     \dim_set:Nn \l__enumext_anspic_body_htdp_dim
4508     {
4509       \box_ht_plus_dp:N \l__enumext_anspic_body_box

```

```

4510     }
4511     \IfDocumentMetadataT
4512     {
4513         \tag_resume:n {keyanspic}
4514     }
4515 }
4516 }

```

The `\__enumext_anspic_label:nn` function will process inside `\makebox` the *starred argument* ‘\*’ and *optional argument* passed to the command. Here we will store the `<label>` and *optional argument* in *prop list* and *sequence* and execute the `show-ans`, `show-pos`, `font`, `wrap-label`, `wrap-ans*` and `wrap-opt` keys.

```

4517 \cs_new_protected:Npn \__enumext_anspic_label:nn #1 #2
4518 {
4519     \makebox[ \l__enumext_anspic_mini_width_dim ][ c ]
4520     {
4521         \bool_if:nTF { #1 }
4522         {
4523             \bool_set_true:N \l__enumext_item_wrap_key_bool
4524             \bool_set_true:N \l__enumext_wrap_label_v_bool
4525             \__enumext_keyans_save_item_opt:n { #2 }
4526             \__enumext_keyans_addto_prop:n { #2 }
4527             \__enumext_keyans_store_ref:
4528             \__enumext_keyans_addto_seq:n { #2 }
4529             \int_gincr:N \g__enumext_check_starred_cmd_int
4530             \__enumext_keyans_show_ans:
4531             \__enumext_keyans_show_pos:
4532             \makebox[ \l__enumext_labelwidth_v_dim ][ c ]
4533             {
4534                 \tl_use:N \l__enumext_label_font_style_v_tl
4535                 \__enumext_keyans_wrapper_label:n { \l__enumext_label_vi_tl }
4536             }
4537             \skip_horizontal:n { \l__enumext_labelsep_v_dim }
4538             \__enumext_keyans_show_item_opt:
4539         }
4540         {
4541             \bool_set_false:N \l__enumext_item_wrap_key_bool
4542             \tl_use:N \l__enumext_label_font_style_v_tl
4543             \__enumext_wrapper_label_v:n { \l__enumext_label_vi_tl }
4544         }
4545     }
4546 }

```

The function `\__enumext_anspic_label_pos:nnn` will be in charge of handling the “*counter*” and the position of the `<label>`, set by `label-pos` key which will have the same configuration as the `keyans` environment.

```

4547 \cs_new_protected:Npn \__enumext_anspic_label_pos:nnn #1 #2 #3
4548 {
4549     \stepcounter { enumXvi }
4550     \__enumext_anspic_body_dim:n { #3 }
4551     \bool_if:NTF \l__enumext_anspic_label_above_bool
4552     {
4553         \__enumext_anspic_label:nn { #1 } { #2 }
4554     }
4555     {
4556         \raisebox
4557         {
4558             -\dim_eval:n
4559             {
4560                 \l__enumext_anspic_label_htdp_dim
4561                 + \l__enumext_anspic_body_htdp_dim
4562                 + \box_dp:N \strutbox
4563                 + \l__enumext_anspic_label_sep_skip
4564             }
4565         }
4566         [ opt ] [ opt ]
4567         {
4568             \__enumext_anspic_label:nn { #1 } { #2 }
4569         }
4570     }
4571 }
4572 %

```

The `\__enumext_anspic_args:nnn` function will be responsible for placing the code compatible with *tagged* PDF and the arguments within the `\l__enumext_anspic_args_seq` sequence which will be processed by the `\__enumext_anspic_print:n` function in the second part of the definition of the `keyanspic` environment.

```

4573 \cs_new_protected:Nn \__enumext_anspic_args:nnn
4574 {
4575   \__enumext_anspic_start_list_tag:
4576   \__enumext_anspic_label_pos:nnn { #1 } { #2 } { #3 }
4577   \__enumext_anspic_stop_start_list_tag:
4578   \bool_if:NTF \l__enumext_anspic_label_above_bool
4579   {
4580     \[\l__enumext_anspic_label_sep_skip] #3
4581   }
4582   {
4583     \[ #3
4584   }
4585   \__enumext_anspic_stop_list_tag:
4586 }

```

The value  $\langle n^{\circ} upper, n^{\circ} lower \rangle$  passed to the `layout-sty` key is split by comma and is handled directly by the function `\__enumext_anspic_print:n` and passed to the function `\__enumext_anspic_row:n`.

```

4587 \cs_new_protected:Nn \__enumext_anspic_print:n
4588 {
4589   \clist_map_function:nN { #1 } \__enumext_anspic_row:n
4590 }
4591 \cs_generate_variant:Nn \__enumext_anspic_print:n { e, V }

```

The function `\__enumext_anspic_row:n` will set the *widths* for the `minipage` environments and place *all arguments* passed to `\anspic saved` in the `\l__enumext_anspic_args_seq` sequence inside them.

```

4592 \cs_new_protected:Nn \__enumext_anspic_row:n
4593 {
4594   \dim_set:Nn \l__enumext_anspic_mini_width_dim { \linewidth / #1 }
4595   \int_set:Nn \l__enumext_anspic_above_int { \l__enumext_anspic_below_int }
4596   \int_set:Nn \l__enumext_anspic_below_int { \l__enumext_anspic_above_int + #1 }
4597   \int_step_inline:nnn
4598   { \l__enumext_anspic_above_int + 1 }
4599   { \l__enumext_anspic_below_int }
4600   {
4601     \IfDocumentMetadataT
4602     {
4603       \tag_suspend:n {minipage}
4604     }
4605     \begin{minipage}[ \l__enumext_anspic_mini_pos_str ]{ \l__enumext_anspic_mini_width_dim }
4606       \centering
4607       \seq_item:Nn \l__enumext_anspic_args_seq { ##1 }
4608     \end{minipage}
4609     \IfDocumentMetadataT
4610     {
4611       \tag_resume:n {minipage}
4612     }
4613   }
4614   \par
4615 }

```

The `\__enumext_anspic_exec:` function will execute all the code in the `\anspic` command in the second argument of the `keyanspic` environment definition. If the key `layout-sty` is not set, everything will be printed on a *single line*.

```

4616 \cs_new_protected:Nn \__enumext_anspic_exec:
4617 {
4618   \tl_if_empty:NTF \l__enumext_anspic_layout_style_tl
4619   {
4620     \__enumext_anspic_print:e { \seq_count:N \l__enumext_anspic_args_seq }
4621   }
4622   {
4623     \__enumext_anspic_print:V \l__enumext_anspic_layout_style_tl
4624   }
4625 }

```

(End of definition for `\anspic` and others. This function is documented on page 18.)

### 13.46 The horizontal environments

Generating *horizontal list environments* is NOT as simple as standard  $\text{\LaTeX}$  list environments. The fundamental part of the code is adapted from the `shortlist` package to a more modern version using `expl3`. It is not possible to redefine `\item` and `\makeLabel` using `\RenewDocumentCommand` as in the vertical *non starred* versions.

To achieve the *horizontal list environments* we will capture the `\item` command and the  $\langle content \rangle$  of this in *horizontal box* using `\makebox` for the `label` and a `minipage` environment for the  $\langle content \rangle$  passed to `\item`, we will also add the *optional argument* ( $\langle number \rangle$ ) to `\item` to be able to *join columns* horizontally, in simple terms, we want `\item` to behave in the same way as in the `enumext` environment but adding an *first optional argument* ( $\langle number \rangle$ ).

A side effect is the limitation of using `\item` in this way *without* using `\RenewDocumentCommand`, which loses the original definition and affects the *standard list environments* provided by  $\text{\LaTeX}$  and any environment defined using base `list` environment, including: `itemize`, `enumerate`, `description`, `quote`, `quotation`, `verse`, `center`, `flushleft`, `flushright`, `verbatim`, `tabbing`, `trivlist`, `list` and all environments created with `\newtheorem`.

One way to get around this is to use something like:

```
\AddToHook{env/enumerate/before}{recover original \item definition}
```

inside `minipage`, but in my partial tests this does not have the desired effect and the vertical and horizontal spacing is distorted. For now this will remain as a limitation and I will see if it is feasible to implement it in the future.

For compatibility with the *tagged* PDF we close the environments according to the presence or not of the `mini-env` key.

#### 13.46.1 Functions for item box width

We set the default value for the *width of the box* containing the  $\langle content \rangle$  of the items for `enumext*` environment.

```
\__enumext_starred_columns_set_vii:
\__enumext_starred_columns_set_viii:
4626 \cs_new_protected:Nn \__enumext_starred_columns_set_vii:

### 13.46.3 Functions for mini-env, mini-right and mini-right\* keys

The implementation of the `mini-env` key support is almost identical to the one used in the **enumext** and **keyans** environments, the difference is that the `\__enumext_mini_page` environment on the “right side” is executed “after” closing the environment, so it is necessary to make a global copy of the variable `\l__enumext_minipage_right_vii_dim` in the variable `\g__enumext_minipage_right_vii_dim`.

```

4786 \cs_new_protected:Nn \__enumext_start_mini_vii:
4787 {
4788     \dim_compare:nNnT { \l__enumext_minipage_right_vii_dim } > { \c_zero_dim }
4789     {
4790         \dim_set:Nn \l__enumext_minipage_left_vii_dim
4791         {

```

```

4792         \linewidth
4793         - \l__enumext_minipage_right_vii_dim
4794         - \l__enumext_minipage_hsep_vii_dim
4795     }
4796     \bool_set_true:N \l__enumext_minipage_active_vii_bool
4797     \dim_gset_eq:NN
4798         \g__enumext_minipage_right_vii_dim
4799         \l__enumext_minipage_right_vii_dim
4800     \__enumext_mini_addvspace_vii:
4801     \nointerlineskip\noindent
4802     \__enumext_mini_page{ \l__enumext_minipage_left_vii_dim }
4803 }
4804 }

```

The function `\__enumext_stop_mini_vii:` closes the `\__enumext_mini_page` environment on the “left side”, applies `\hfill` and set the variable `\g__enumext_minipage_active_vii_bool` to “true” which will be used in the function `\__enumext_after_env:nn` to execute the `minipage` on the “right side”. At this point we will execute the `\__enumext_stop_list:` and `\__enumext_stop_store_level_vii:` functions stopping the `list` environment and the level saving mechanism for storage in *sequence* of the `\anskey` command and `anskey*` environment. This function is passed to the `\__enumext_after_list_vii:` function in the second part of the `enumext*` environment definition (§13.47).

```

4805 \cs_new_protected:Nn \__enumext_stop_mini_vii:
4806 {
4807     \bool_if:NTF \l__enumext_minipage_active_vii_bool
4808     {
4809         \__enumext_stop_list:
4810         \__enumext_stop_store_level_vii:
4811         \IfDocumentMetadataT { \tag_resume:n {enumext*} }
4812         \end__enumext_mini_page
4813         \hfill
4814         \bool_gset_true:N \g__enumext_minipage_active_vii_bool
4815     }
4816     {
4817         \__enumext_stop_list:
4818         \__enumext_stop_store_level_vii:
4819     }
4820 }

```

(End of definition for `\__enumext_start_mini_vii:` and `\__enumext_stop_mini_vii:`.)

Finally we execute the `{\code}` passed to the `mini-right` or `mini-right*` keys stored in the variable `\g__enumext_miniright_code_vii_tl` in the `minipage` environment on the “right side”. For compatibility with the `caption` package and possibly other `{\code}` passed to this key, we will pass it to a box and then print it.

```

(End of definition for `\__enumext_start_mini_viii:` and `\__enumext_stop_mini_viii:.`)

### 13.47 The environment `enumext*`

`enumext*` First we will generate the environment and we will give a temporary definition to `\__enumext_stop_item_tmp_vii:` equal to `\__enumext_first_item_tmp_vii:` and next to `\item` equal to `\__enumext_start_item_tmp_vii:` which we will redefine later. Unlike the implementation used by the `shortlst`

package, we will not set the values of `\rightskip` and `\@rightskip` equal to `\@flushglue` whose value is `0.0pt plus 1.0 fil`, in the tests I have performed this fails in some circumstances and different results are obtained when using pdfTeX and LuaTeX.

```

4910 \NewDocumentEnvironment{enumext*}{ o }
4911 {
4912   \__enumext_safe_exec_vii:
4913   \__enumext_parse_keys_vii:n {#1}
4914   \__enumext_before_list_vii:
4915   \__enumext_start_store_level_vii:
4916   \__enumext_start_list:nn { }
4917   {
4918     \__enumext_list_arg_two_vii:
4919     \__enumext_before_keys_exec_vii:
4920   }
4921   \IfDocumentMetadataT { \tag_suspend:n {enumext*} }
4922   \__enumext_starred_columns_set_vii:
4923   \item[] \scan_stop:

```

For compatibility with *tagged* PDF in L<sup>A</sup>T<sub>E</sub>X release 2026-06-01, we will set `\setcounter` at this point in the environment definition, thereby avoiding the problem reported by @teepeeemm in `enumext* nested in enumext starts at 2 with DocumentMetadata` this was caused by the `latex-lab-block`[19] update in this release.

```

4924   \setcounter { enumXvii } { \int_eval:n { \int_use:c { \__enumext_start_vii_int } - 1 } }
4925   \cs_set_eq:NN \__enumext_stop_item_tmp_vii: \__enumext_first_item_tmp_vii:
4926   \cs_set_eq:NN \item \__enumext_start_item_tmp_vii:
4927   \ignorespaces
4928 }
4929 {
4930   \IfDocumentMetadataT { \tag_struct_end:n {tag=text-unit} }
4931   \__enumext_stop_item_tmp_vii:
4932   \__enumext_remove_extra_parsep_vii:
4933   \__enumext_after_list_vii:
4934 }

```

(End of definition for `enumext*`. This function is documented on page 5.)

`\__enumext_safe_exec_vii:`

We will first call the function `\__enumext_is_not_nested:` which sets `\g__enumext_starred_bool` to true if we are NOT nested within `enumext`, then call the function `\__enumext_internal_mini_page:` to create the environment `__enumext_mini_page`, we will increment `\l__enumext_level_h_int` to restrict nesting of the environment, set `\l__enumext_starred_bool` to true and finally call the function `\__enumext_is_on_first_level:` which sets `\l__enumext_starred_first_bool` to true if we are not nested, allowing the “storage system” to be used.

```

4935 \cs_new_protected:Nn \__enumext_safe_exec_vii:
4936 {
4937   \__enumext_is_not_nested:
4938   \__enumext_internal_mini_page:
4939   \int_incr:N \l__enumext_level_h_int
4940   \int_compare:nNnT { \l__enumext_level_h_int } > { 1 }
4941   {
4942     \msg_error:nn { enumext } { nested }
4943   }
4944   \int_compare:nNnT { \l__enumext_keyans_level_h_int } = { 1 }
4945   {
4946     \msg_error:nnn { enumext } { nested-horizontal } { keyans* }
4947   }
4948   \bool_set_true:N \l__enumext_starred_bool
4949   \bool_set_false:N \l__enumext_standar_bool
4950   \__enumext_is_on_first_level:
4951 }

```

(End of definition for `\__enumext_safe_exec_vii:`.)

`\__enumext_parse_keys_vii:n`

We will first check the state of the variable `\l__enumext_resume_count_vii_bool` set by the key `resume` and call the function `\__enumext_resume_last_counter:` if it is “true”, then we will clear the variable `\l__enumext_series_name_str` used by the key `series`, process the environment `[⟨key = val⟩]` and execute the function `\__enumext_parse_series:n` used by the key `series`, then we execute the function `\__enumext_store_active_keys_vii:n` and reprocess the `⟨keys⟩` to pass them to the storage *sequence* if the key `save-key` is not active.

- Here it is necessary to check the status of `\l__enumext_resume_count_vii_bool` in case the key `resume` is set using `\setenumext{enumext*}{resume}`.

```

4952 \cs_new_protected:Npn \__enumext_parse_keys_vii:n #1
4953 {
4954   \bool_if:NT \l__enumext_resume_count_vii_bool
4955   {
4956     \__enumext_resume_last_counter:
4957   }
4958   \tl_if_novalue:nF {#1}
4959   {
4960     \str_clear:N \l__enumext_series_name_str
4961     \keys_set:nn { enumext / enumext* } {#1}
4962     \bool_if:NF \l__enumext_print_keyans_cmd_bool
4963     {
4964       \__enumext_parse_series:n {#1}
4965     }
4966     \__enumext_store_active_keys_vii:n {#1}
4967   }
4968 }

```

(End of definition for \\_\_enumext\_parse\_keys\_vii:n.)

`\__enumext_before_list_vii:` The function `\__enumext_before_list_vii:` first calls the function `\__enumext_vspace_above_vii:` used by the keys `above` and `above*`, then calls the function `\__enumext_check_ans_active:` for the check answer mechanism and finally calls the functions `\__enumext_before_args_exec:` and `\__enumext_start_mini_vii:` used by the keys `before*`, `mini-env`, `mini-right` and `mini-right*`.

```

4969 \cs_new_protected:Nn \__enumext_before_list_vii:
4970 {
4971   \__enumext_vspace_above_vii:

5005     }
5006   }
5007 }

```

(End of definition for \\_\_enumext\_start\_store\_level\_vii: and \\_\_enumext\_stop\_store\_level\_vii:.)

### 13.47.1 The command \item in enumext\*

\\_\_enumext\_first\_item\_tmp\_vii: The \\_\_enumext\_first\_item\_tmp\_vii: function will remove horizontal space equal to \labelwidth plus \labelsep to the left of the “first” \item in the environment at the point of execution of this function, where it is equal to the \\_\_enumext\_stop\_item\_tmp\_vii: function inside the environment body definition.

```

5008 \cs_new_protected_nopar:Nn \__enumext_first_item_tmp_vii:
5009 {
5010   \skip_horizontal:n
5011   {
5012     -\l__enumext_labelwidth_vii_dim - \l__enumext_labelsep_vii_dim
5013   }
5014   \ignorespaces
5015 }

```

(End of definition for \\_\_enumext\_first\_item\_tmp\_vii:.)

```

\__enumext_start_item_tmp_vii:
\__enumext_item_peek_args_vii:
\__enumext_joined_item_vii:w
\__enumext_standar_item_vii:w
\__enumext_starred_item_vii:w
\__enumext_starred_item_vii_aux_i:w
\__enumext_starred_item_vii_aux_ii:w
\__enumext_starred_item_vii_aux_iii:w

```

First we will call the function \\_\_enumext\_stop\_item\_tmp\_vii: that we will redefine later, we will increment the value of \l\_\_enumext\_item\_column\_pos\_vii\_int that will count the item’s by rows and the value of \g\_\_enumext\_item\_count\_all\_vii\_int that will count the total of item’s in the environment. After that we will call the function \\_\_enumext\_item\_peek\_args\_vii: that will handle the arguments passed to \item.

```

5016 \cs_new_protected_nopar:Nn \__enumext_start_item_tmp_vii:
5017 {
5018   \__enumext_stop_item_tmp_vii:
5019   \int_incr:N \l__enumext_item_column_pos_vii_int
5020   \int_gincr:N \g__enumext_item_count_all_vii_int
5021   \__enumext_item_peek_args_vii:
5022 }

```

The function \\_\_enumext\_item\_peek\_args\_vii: will handle the \item(<number>). Look for the argument “(”, if it is present we will call the function \\_\_enumext\_joined\_item\_vii:w (<number>), which is in charge of joining the item’s in the same row, in case they are not present we will set the default value (1).

```

5023 \cs_new_protected:Nn \__enumext_item_peek_args_vii:
5024 {
5025   \peek_meaning:NTF (
5026     { \__enumext_joined_item_vii:w }
5027     { \__enumext_joined_item_vii:w (1) }
5028   }

```

The function \\_\_enumext\_joined\_item\_vii:w will first call the function \\_\_enumext\_starred\_joined\_item\_vii:n in charge of setting the width of the box that will store the content passed to \item. Then we will look for the argument “\*”, if it is present we will call the function \\_\_enumext\_starred\_item\_vii:w otherwise we will call the function \\_\_enumext\_standar\_item\_vii:w.

```

5029 \cs_new_protected:Npn \__enumext_joined_item_vii:w (#1)
5030 {
5031   \__enumext_starred_joined_item_vii:n {#1}

(End of definition for `\l__enumext_start_item_tmp_vii:` and others.)

`\l__enumext_fake_make_label_vii:n`

The `\l__enumext_fake_make_label_vii:n` function will be in charge of handling our definition of `\item`. First we increment the counter `enumxvii` for the enumerated items and activate support for the *check answers* mechanism, followed by support for `\item*[\langle symbol \rangle][\langle offset \rangle]` if present, then the `wrap-label` and `wrap-label*` keys which we execute using `\makebox` whose width will be given by the `labelwidth` key and position by the `align` key, inside the argument of this we will execute the `font` key together with the function defined by the `wrap-label` or `wrap-label*` keys. Finally we execute the `labelsep` key applying a `\skip_horizontal:N` and `\ignorespaces`.

- For compatibility with *tagged* PDF and `hyperref` when an environment `enumext` is nested in `enumext*` and the key `save-ans` is not active need setting the `\if@hyper@item` switch to “true”. The explanation for this is given by the master Heiko Oberdiek on `\refstepcounter{enumi}` twice (or more) creates destination with the same identifier. This patch is only needed if you are running `pdflatex` and not if you are running `lua1latex`

```

### 13.47.2 Real definition of \item in enumext\*

The functions \\_\_enumext\_start\_item\_vii:w and \\_\_enumext\_stop\_item\_vii: executing the true definition of \item inside the enumext\* environment, unlike the implementation in shortlst we will NOT use an extra group and the plain form of the \rbox environment.

```

\__enumext_start_item_vii:w
\__enumext_stop_item_vii:

```

The first thing we will do is set the value of \\_\_enumext\_stop\_item\_tmp\_vii: equal to \\_\_enumext\_stop\_item\_vii: which we will define later, after that we will start capturing \item and “item content” in a horizontal box where the width will be \itemwidth plus \labelwidth plus \labelsep.

```

5125 \cs_new_protected_nopar:Npn \__enumext_start_item_vii:w [#1]
5126 {
5127     \cs_set_eq:NN \__enumext_stop_item_tmp_vii: \__enumext_stop_item_vii:
5128     \hbox_set_to_wd:Nnw \l__enumext_item_text_vii_box
5129     {
5130         \l__enumext_joined_width_vii_dim
5131         + \l__enumext_labelwidth_vii_dim
5132         + \l__enumext_labelsep_vii_dim
5133     }

```

Redefine the \footnote command.

```
5134 \__enumext_renew_footnote_starred:
```

Now we insert our sockets for tagging PDF support and run \item.

```

5135 \__enumext_start_list_tag:n {enumext*}
5136 \__enumext_fake_make_label_vii:n {#1}
5137 \__enumext_stop_start_list_tag:

```

Finally we open the minipage environment, capture the “item content”, make \parindent take the value of the key listparindent and \parskip take the value of the key parsep, then execute the keys itemindent and first.

- Here the use of \unskip and \skip\_horizontal:n with the value of listparindent is necessary, otherwise an unwanted space is created when using \item[⟨opt⟩] and the value passed to the key itemindent is incremented.

```

5138 \__enumext_minipage:w [ t ]{ \l__enumext_joined_width_vii_dim }
5139 \dim_set_eq:NN \parindent \l__enumext_listparindent_vii_dim

```

```

5141     \__enumext_unskip_unkern:
5142     \__enumext_unskip_unkern:
5143     \skip_horizontal:n { -\l__enumext_listparindent_vii_dim } \ignorespaces
5144     \tl_use:N \l__enumext_fake_item_indent_vii_tl
5145     \tl_use:N \l__enumext_after_list_args_vii_tl
5146 }

```

The `\__enumext_stop_item_vii:` function will finish the fetching `\item` and “*item content*” by closing the `minipage` environment, the *sockets* for *tagging* PDF and the *horizontal box*.

```

5147 \cs_new_protected_nopar:Nn \__enumext_stop_item_vii:
5148 {
5149     \__enumext_endminipage:
5150     \__enumext_stop_list_tag:n {enumext*}
5151     \hbox_set_end:

```

Here we will reduce the *warnings* a bit by setting the value of `\hbadness` to `10000`, print `\item` and “*item content*” from the *horizontal box*.

```

5152     \int_set:Nn \hbadness { 10000 }
5153     \box_use_drop:N \l__enumext_item_text_vii_box

```

Finally apply the *vertical space* between rows set by `itemsep` key passed to `\parsep` using `\par\noindent` and *horizontal space* between columns set by `columns-sep` key using `\skip_horizontal:N`.

```

5154     \int_compare:nNnTF
5155     { \l__enumext_item_column_pos_vii_int } = { \l__enumext_columns_vii_int }
5156     {
5157         \par\noindent
5158         \int_zero:N \l__enumext_item_column_pos_vii_int
5159     }
5160     {
5161         \skip_horizontal:N \l__enumext_columns_sep_vii_dim
5162     }
5163 }

```

(End of definition for `\__enumext_start_item_vii:w` and `\__enumext_stop_item_vii:.`)

`\__enumext_remove_extra_parsep_vii:`

Remove the extra *vertical space* equal to `\parsep=\itemsep` when the total number of `\item` is divisible by the number of `\item` in the last row of the environment. Here the use of `\unskip` or `\removeatlastskip` fails and does not obtain the expected result, using `\vspace` is the option and in this case, we can use a simplified version since we are always in *vertical mode*.

```

5164 \cs_new_protected:Nn \__enumext_remove_extra_parsep_vii:
5165 {
5166     \int_compare:nNnT
5167     {
5168         \int_mod:nn
5169         { \g__enumext_item_count_all_vii_int } { \l__enumext_columns_vii_int }
5170     }
5171     =
5172     { 0 }
5173     {
5174         \para_end:
5175         \skip_vertical:n { -\l__enumext_itemsep_vii_skip }
5176         \skip_vertical:N \c_zero_skip
5177         \int_gzero:N \g__enumext_item_count_all_vii_int
5178     }
5179 }

```

(End of definition for `\__enumext_remove_extra_parsep_vii:.`)

As we don’t want our check to be executed `check-ans` by levels but on the complete list, we will take it out of the `enumext*` environment using the “*hook*” function `\__enumext_after_env:nn`.

```

5180 \__enumext_after_env:nn {enumext*}
5181 {
5182     \__enumext_execute_after_env:
5183 }

```

### 13.48 The environment keyans\*

**keyans\*** The implementation of **keyans\*** environment is the similar as that used by the **enumext\*** environment except for the `\__enumext_check_starred_cmd:n` function added in the second part.

```

5184 \NewDocumentEnvironment{keyans*}{ o }
5185 {
5186   \__enumext_safe_exec_viii:
5187   \__enumext_parse_keys_viii:n {#1}

5246 }

```

(End of definition for `\__enumext_before_list_viii:`.)

`\__enumext_after_list_viii:` The function `\__enumext_after_list_viii:` first call the function `\__enumext_stop_mini_viii:`, then apply the `{\code}` handled by the `after` key together with the *vertical space* handled by the `below` key if they are present.

```

5247 \cs_new_protected:Nn \__enumext_after_list_viii:
5248 {
5249     \__enumext_stop_mini_viii:
5250     \__enumext_after_stop_list_viii:
5251     \__enumext_vspace_below_viii:
5252 }

```

(End of definition for `\__enumext_after_list_viii:`.)

#### 13.48.1 The command `\item` in `keyans*`

The idea here is to make the `\item` command behave in the same way as in the `keyans` environment with the difference of the *optional argument* (`\number`) which works in the same way as in the `enumext*` environment. In simple terms we want to store the `\label` next to the `[\content]` if it is present in the *sequence* and *prop list* defined by `save-ans` key for `\item*`, `\item*[\content]`, `\item(\number)*` and `\item(\number)*[\content]` commands.

`\__enumext_first_item_tmp_viii:` The `\__enumext_first_item_tmp_viii:` function will remove horizontal space equal to `\labelwidth` plus `\labelsep` to the left of the “first” `\item` in the environment at the point of execution of this function, where it is equal to the `\__enumext_stop_item_tmp_viii:` function inside the environment body definition.

```

5253 \cs_new_protected_nopar:Nn \__enumext_first_item_tmp_viii:
5254 {
5255     \skip_horizontal:n
5256     {
5257         -\l__enumext_labelwidth_viii_dim - \l__enumext_labelsep_viii_dim
5258     }
5259     \ignorespaces
5260 }

```

(End of definition for `\__enumext_first_item_tmp_viii:`.)

`\__enumext_start_item_tmp_viii:` First we will call the function `\__enumext_stop_item_tmp_viii:` that we will redefine later, we will increment the value of `\l__enumext_item_column_pos_viii_int` that will count the item’s by rows and the value of `\g__enumext_item_count_all_viii_int` that will count the total of item’s in the environment. `\__enumext_item_peek_args_viii:` After that we will call the function `\__enumext_item_peek_args_viii:` that will handle the arguments passed to `\item`.

```

5261 \cs_new_protected_nopar:Nn \__enumext_start_item_tmp_viii:
5262 {
5263     \__enumext_stop_item_tmp_viii:
5264     \int_incr:N \l__enumext_item_column_pos_viii_int
5265     \int_gincr:N \g__enumext_item_count_all_viii_int
5266     \__enumext_item_peek_args_viii:
5267 }

```

The function `\__enumext_item_peek_args_viii:` will handle the `\item(<number>)`. Look for the argument “(”, if it is present we will call the function `\__enumext_joined_item_viii:w (<number>)`, which is in charge of joining the item’s in the same row, in case they are not present we will set the default value (1).

```

5268 \cs_new_protected:Nn \__enumext_item_peek_args_viii:
5269 {
5270   \peek_meaning:NTF (
5271     { \__enumext_joined_item_viii:w }
5272     { \__enumext_joined_item_viii:w (1) }
5273   }

```

The function `\__enumext_joined_item_viii:w` will first call the function `\__enumext_starred_joined_item_viii:n` in charge of setting the *width* of the box that will store the content passed to `\item`. Then we will look for the argument “\*”, if it is present we will call the function `\__enumext_starred_item_viii:w` otherwise we will call the function `\__enumext_standar_item_viii:w`.

```

5274 \cs_new_protected:Npn \__enumext_joined_item_viii:w (#1)
5275 {
5276   \__enumext_starred_joined_item_viii:n {#1}
5277   \peek_meaning_remove:NTF *
5278   { \__enumext_starred_item_viii:w }
5279   { \__enumext_standar_item_viii:w }
5280 }

```

The function `\__enumext_standar_item_viii:w` will first look for the argument “[”, if present it will set the state of the variable `\l__enumext_wrap_label_opt_viii_bool` equal to the state of the variable `\l__enumext_wrap_label_opt_viii_bool` handled by the key `wrap-label*` and finally execute the *non-enumerated* version `\item[<custom>]` by means of the function `\__enumext_start_item_viii:w`, otherwise we will set the value of the variable `\l__enumext_wrap_label_viii_bool` handled by the `wrap-label` key to true and set the switch `\if@noitemarg` to true to execute the enumerated version of `\item` by means of the function `\__enumext_start_item_viii:w [ \l__enumext_label_viii_tl ]`.

```

5281 \cs_new_protected:Npn \__enumext_standar_item_viii:w
5282 {

5450         { \l__enumext_columns_viii_int }
5451     }
5452     =
5453     { 0 }
5454     {
5455         \para_end:
5456         \skip_vertical:n { -\l__enumext_itemsep_viii_skip }
5457         \skip_vertical:N \c_zero_skip
5458         \int_gzero:N \g__enumext_item_count_all_viii_int
5459     }
5460 }

```

(End of definition for \l\_\_enumext\_remove\_extra\_parsep\_viii:.)

### 13.49 The command \getkeyans

```

\getkeyans
\__enumext_getkeyans_aux:n
\__enumext_getkeyans:nn

```

The `\getkeyans` command takes a *mandatory argument* of the form  $\{\langle store\ name : position \rangle\}$ . Retrieve a “single content” stored by `\anskey`, `\anspic*` and `\item*` and `anskey*` from *prop list* defined by `save-ans` key.

```

5461 \NewDocumentCommand \getkeyans { m }
5462 {
5463     \exp_args:Ne \__enumext_getkeyans_aux:n
5464     { \tl_to_str:e { \text_expand:n {#1} } }
5465 }

```

The internal function `\__enumext_getkeyans_aux:n` is in charge of *splitting* the *mandatory argument* using “.”. If “.” is omitted it will return an error.

```

5466 \cs_new_protected:Npn \__enumext_getkeyans_aux:n #1
5467 {
5468     \str_if_in:nnTF {#1} { : }
5469     {
5470         \use:e
5471         {
5472             \cs_set:Npn \exp_not:N \__enumext_tmp:w #1 \c_colon_str ##2 \scan_stop:
5473             { {##1} {##2} }
5474         }
5475         \exp_after:wN \__enumext_getkeyans:nn \__enumext_tmp:w #1 \scan_stop:
5476     }
5477     { \msg_error:nnn { enumext } { missing-colon } {#1} }
5478 }

```

The internal function `\__enumext_getkeyans:nn` will check for the existence of the *prop list*, if it does not exist it will return an error message, then it will fetch the content specified by the *second argument* from *prop list*.

```

5479 \cs_new_protected:Npn \__enumext_getkeyans:nn #1 #2
5480 {
5481     \prop_if_exist:cTF { g__enumext_#1_prop }
5482     {
5483         \prop_item:cn { g__enumext_#1_prop } {#2}
5484     }
5485     {
5486         \msg_error:nnn { enumext } { undefined-storage-anskey } {#1}
5487     }
5488 }

```

(End of definition for `\getkeyans`, `\__enumext_getkeyans_aux:n`, and `\__enumext_getkeyans:nn`. This function is documented on [page 19](#).)

### 13.50 The command \printkeyans

The `\printkeyans` command prints “all stored content” in the sequence defined by the `save-ans` key.

The first thing we will do is define a set of *filtered keys* with which we will control the options of the different nesting levels for the environment `enumext` and `enumext*` by storing their values in the list of tokens `\l__enumext_print_keyans_X_tl`.

The variable `\l__enumext_print_keyans_starred_tl` will have the default *keys* for `\printkeyans*` and will be set by `\setenumext[⟨print*⟩]` and the variable `\l__enumext_print_keyans_vii_tl` will have the default keys for the environment `enumext*` nested within the sequence and will be set by `\setenumext[⟨print,*⟩]`, the rest of the variables will be for the environment `enumext` and will be set by `\setenumext[⟨print,level⟩]`.

```

5489 \keys_define:nn { enumext / print }
5490 {
5491   print* .code:n = \keys_precompile:neN { enumext / enumext* }
5492               { \__enumext_filter_save_key:n {#1} }
5493               \l__enumext_print_keyans_starred_tl, % starred cmd
5494   print* .initial:n = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5495                       rightmargin=0pt, listparindent=0pt, nosep, label=\arabic*.,
5496                       columns=2, first=\small, font=\small },
5497   print-1 .code:n = \keys_precompile:neN { enumext / level-1 }
5498                  { \__enumext_filter_save_key:n {#1} }
5499                  \l__enumext_print_keyans_i_tl,
5500   print-1 .initial:n = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5501                       rightmargin=0pt, listparindent=0pt, nosep, label=\arabic*.,
5502                       columns=2, first=\small, font=\small },
5503   print-2 .code:n = \keys_precompile:neN { enumext / level-2 }
5504                  { \__enumext_filter_save_key:n {#1} }
5505                  \l__enumext_print_keyans_ii_tl,
5506   print-2 .initial:n = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5507                       rightmargin=0pt, listparindent=0pt, nosep, label=(\alph*),
5508                       first=\small, font=\small },
5509   print-3 .code:n = \keys_precompile:neN { enumext / level-3 }
5510                  { \__enumext_filter_save_key:n {#1} }
5511                  \l__enumext_print_keyans_iii_tl,
5512   print-3 .initial:n = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5513                       rightmargin=0pt, listparindent=0pt, nosep, label=\roman*.,
5514                       first=\small, font=\small },
5515   print-4 .code:n = \keys_precompile:neN { enumext / level-4 }
5516                  { \__enumext_filter_save_key:n {#1} }
5517                  \l__enumext_print_keyans_iv_tl,
5518   print-4 .initial:n = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5519                       rightmargin=0pt, listparindent=0pt, nosep, label=\Alph*.,
5520                       first=\small, font=\small },
5521   print-* .code:n = \keys_precompile:neN { enumext / enumext* }
5522                  { \__enumext_filter_save_key:n {#1} }
5523                  \l__enumext_print_keyans_vii_tl, % starred nested
5524   print-* .initial:n = { labelwidth=0pt, labelsep=0.3333em, itemindent=0pt, list-offset=0pt,
5525                       rightmargin=0pt, listparindent=0pt, nosep, label=\arabic*.,
5526                       first=\small, font=\small },
5527 }

```

🔗 The reason for storing *keys* in token lists using `\keys_precompile:neN` is because the keys are set via `\setenumext` but are later executed by running the command `\printkeyans` and they are not handled directly by its *optional argument*, except those related to the *first* opening level.

`\printkeyans`

Create a user command to print “all stored content” in sequence for `\anskey`, `anskey*`, `\item*` and `\anspic*`.

`\__enumext_printkeyans:nnn`

Within a group we will run our “precompiled keys” and then call the internal function `\__enumext_printkeyans:nnn`.

```

5528 \NewDocumentCommand \printkeyans { s O{ } m }
5529 {
5530   \group_begin:
5531     \bool_set_true:N \l__enumext_print_keyans_cmd_bool
5532     \tl_use:N \l__enumext_print_keyans_i_tl
5533     \tl_use:N \l__enumext_print_keyans_ii_tl
5534     \tl_use:N \l__enumext_print_keyans_iii_tl
5535     \tl_use:N \l__enumext_print_keyans_iv_tl
5536     \tl_use:N \l__enumext_print_keyans_vii_tl
5537     \__enumext_printkeyans:nnn { #1 } { #2 } { #3 }
5538     \bool_set_false:N \l__enumext_print_keyans_cmd_bool
5539   \group_end:
5540 }

```

The internal function `\__enumext_printkeyans:nnn` will check for the existence of the *sequence*, if it does not exist it will return an error message, then it will check if not empty.

```

5541 \cs_new_protected:Npn \__enumext_printkeyans:nnn #1 #2 #3
5542 {
5543   \seq_if_exist:cTF { g__enumext_#3_seq }
5544   {
5545     \seq_if_empty:cF { g__enumext_#3_seq }
5546     {

```

If the *starred argument* ‘\*’ is present we will check that the environment `enumext*` is not saved in the *sequence*, then execute the variable `\l__enumext_print_keyans_starred_tl` that contains the default *⟨keys⟩* for the environment `enumext*`, we set `\l__enumext_base_line_fix_bool` and `\l__enumext_print_keyans_star_bool` to true for *baseline correction*, open the `enumext*` environment passing the *optional argument* and map the *sequence*, then set `\l__enumext_base_line_fix_bool` and `\l__enumext_print_keyans_star_bool` to false.

```

5547       \bool_if:nTF {#1}
5548       {
5549         \seq_if_in:cnTF { g__enumext_#3_seq } { \end{enumext*} }
5550         {
5551           \msg_error:nnnn { enumext } { print-starred } {#3} { enumext* }
5552         }
5553         {
5554           \tl_use:N \l__enumext_print_keyans_starred_tl
5555           \bool_set_true:N \l__enumext_base_line_fix_bool
5556           \bool_set_true:N \l__enumext_print_keyans_star_bool
5557           \begin{enumext*}[#2]
5558             \seq_map_inline:cn { g__enumext_#3_seq } { ##1 }
5559           \end{enumext*}
5560           \bool_set_false:N \l__enumext_base_line_fix_bool
5561           \bool_set_false:N \l__enumext_print_keyans_star_bool
5562         }
5563       }

```

Otherwise it will open the environment `enumext` passing the *optional argument* to the “first level” then map the *sequence*.

```

5564       {
5565         \begin{enumext}[#2]
5566         \seq_map_inline:cn { g__enumext_#3_seq } { ##1 }
5567         \end{enumext}
5568       }
5569     }
5570   }
5571   {
5572     \msg_error:nnn { enumext } { undefined-storage-anskey } {#3}
5573   }
5574 }

```

(End of definition for `\printkeyans` and `\__enumext_printkeyans:nnn`. This function is documented on page 20.)

### 13.51 The command `\setenumext`

The command `\setenumext` will be in charge of managing the *⟨keys⟩* passed to all environments and to the `\printkeyans` command. We must take precautions with the `enumext*` and `enumext` environments so as not to capture *⟨keys⟩* that complicate us.

```

\__enumext_filter_level:n
  \__enumext_filter_level_key:n
  \__enumext_filter_level_pair:nn

```

The function `\__enumext_filter_level:n` will be in charge of filtering the *⟨keys⟩* passed to the `enumext` and `enumext*` environments.

```

5575 \cs_new:Npn \__enumext_filter_level:n #1
5576 {
5577   \use:e
5578   {
5579     \keyval_parse:NNn
5580     \__enumext_filter_level_key:n
5581     \__enumext_filter_level_pair:nn {#1}
5582   }
5583 }

```

The function `\__enumext_filter_level_key:n` will be responsible for filtering the *⟨keys⟩* that are passed “without value” by excluding the keys `resume*`, `reset` and `reset*` passed to the `enumext` and `enumext*` environments.

```

5584 \cs_new:Npn \__enumext_filter_level_key:n #1
5585 {

```

```

5586     \str_case:nnF {#1}
5587     {
5588         { resume* } {} { reset } {} { reset* } {}
5589     }
5590     { , { \exp_not:n {#1} } }
5591 }

```

The function `\__enumext_filter_level_pair:nn` will be responsible for filtering the *keys* that are passed “with value” by excluding the `series`, `resume` and `save-ans` keys passed to the `enumext` and `enumext*` environments.

```

5592 \cs_new:Npn \__enumext_filter_level_pair:nn #1#2
5593 {
5594     \str_case:nnF {#1}
5595     {
5596         { series } {} { save-ans } {} { resume } {}
5597     }
5598     { , { \exp_not:n {#1} } = { \exp_not:n {#2} } }
5599 }

```

(End of definition for `\__enumext_filter_level:n`, `\__enumext_filter_level_key:n`, and `\__enumext_filter_level_pair:nn`.)

Now define a “meta families” of *keys* to access from `\setenumext`.

```

5600 \keys_define:nn { enumext / meta-families }
5601 {
5602     enumext-1 .code:n = {
5603         \keys_set:ne { enumext / level-1 }
5604         {
5605             \__enumext_filter_level:n {#1}
5606         }
5607     },
5608     enumext-2 .code:n = {
5609         \keys_set:ne { enumext / level-2 }
5610         {
5611             \__enumext_filter_level:n {#1}
5612         }
5613     },
5614     enumext-3 .code:n = {
5615         \keys_set:ne { enumext / level-3 }
5616         {
5617             \__enumext_filter_level:n {#1}
5618         }
5619     },
5620     enumext-4 .code:n = {
5621         \keys_set:ne { enumext / level-4 }
5622         {
5623             \__enumext_filter_level:n {#1}
5624         }
5625     },
5626     enumext* .code:n = {
5627         \keys_set:ne { enumext / enumext* }
5628         {
5629             \__enumext_filter_level:n {#1}
5630         }
5631     },
5632     keyans .code:n = { \keys_set:nn { enumext / keyans } {#1} },
5633     keyans* .code:n = { \keys_set:nn { enumext / keyans* } {#1} },
5634     print* .code:n = { \keys_set:nn { enumext / print } { print* = {#1} } },
5635     print-1 .code:n = { \keys_set:nn { enumext / print } { print-1 = {#1} } },
5636     print-2 .code:n = { \keys_set:nn { enumext / print } { print-2 = {#1} } },
5637     print-3 .code:n = { \keys_set:nn { enumext / print } { print-3 = {#1} } },
5638     print-4 .code:n = { \keys_set:nn { enumext / print } { print-4 = {#1} } },
5639     print-* .code:n = { \keys_set:nn { enumext / print } { print-* = {#1} } },
5640     unknown .code:n = { \msg_error:nn { enumext } { unknown-key-family } },

5672   }
5673 }

```

Internal functions used by the `\setenumext` command.

```

5674 \cs_new_protected:Npn \__enumext_set_parse:n #1
5675 {
5676   \tl_set:Ne \__enumext_setkey_tmpb_tl { \tl_trim_spaces:n {#1} }
5677   \clist_map_inline:nn { 0, 1, 2, 3, 4, * } % <- max level
5678   { \tl_remove_all:Nn \__enumext_setkey_tmpb_tl {##1} }
5679   \tl_if_empty:NNTF \__enumext_setkey_tmpb_tl
5680   {
5681     \seq_put_right:Ne \__enumext_setkey_tmpa_seq
5682     { \tl_trim_spaces:n {#1} }
5683   }
5684   { \__enumext_set_error:nn {#1} { } }
5685 }
5686 \cs_new_protected:Npn \__enumext_set_error:nn #1 #2
5687 { \msg_error:nnnn { enumext } { invalid-key } {#1} {#2} }

```

(End of definition for `\setenumext`, `\__enumext_set_parse:n`, and `\__enumext_set_error:nn`. This function is documented on page 6.)

### 13.52 The command `\setenumextmeta`

The command `\setenumextmeta` will be responsible for adding new “meta-keys” for the `enumext` and `enumext*` environments. The implementation code was given by Jonathan P. Spratte (@Skillmon) answer in [Simplify syntax for command that adds .meta key to existing keys \(l3keys\)](#).

```

\setenumextmeta
__enumext_key_set_meta:nnn
__enumext_key_def_meta:nnn
__enumext_key_def_meta:Vnn
5688 \int_step_inline:nn { 4 }
5689 {
5690   \keys_define:nn { enumext }
5691   {
5692     #1 .code:n = \str_set:Nn \__enumext_meta_path_str { level-#1 }
5693     ,#1 .value_forbidden:n = true
5694   }
5695 }

```

And now we define the `<keys>` for the environments using `.code:n` for the `enumext` environment and `.meta:n` for the `enumext*` environment.

```

5696 \clist_map_inline:nn { enumext }
5697 {
5698   \keys_define:nn { enumext }
5699   {
5700     #1 .code:n = % ignored for now, might do something useful in the future
5701     ,#1 .value_forbidden:n = true

```

```

5702     ,#1* .code:n = \str_set:Nn \l__enumext_meta_path_str { #1* }
5703     ,#1* .value_forbidden:n = true
5704   }
5705 }
5706 \keys_define:nn { enumext }
5707 {
5708   * .meta:n = enumext*
5709   ,* .value_forbidden:n = true
5710 }

```

Now we create the user command taking care that unknown cannot be passed as an argument.

```

5711 \NewDocumentCommand \setenumextmeta { s O{enumext,1} m +m }
5712 {
5713   \str_if_eq:eeTF { \tl_trim_spaces:n {#3} } { unknown }
5714   { \msg_error:nn { enumext } { prohibited-unknown } }
5715   {
5716     \bool_if:nTF {#1}
5717     {
5718       \int_step_inline:nn { 4 }
5719       { \__enumext_key_set_meta:nnn { enumext, ##1 } {#3} {#4} }
5720       \__enumext_key_set_meta:nnn { enumext* } {#3} {#4}
5721     }
5722     { \__enumext_key_set_meta:nnn {#2} {#3} {#4} }
5723   }
5724 }

```

The internal functions `\__enumext_key_set_meta:nnn` and `\__enumext_key_def_meta:nnn` will check the *optional argument* and create the “*meta-key*”.

```

5725 \cs_new_protected:Npn \__enumext_key_set_meta:nnn #1
5726 {
5727   \keys_set:nn { enumext } {#1}
5728   \__enumext_key_def_meta:Vnn \l__enumext_meta_path_str
5729 }
5730 \cs_new_protected:Npn \__enumext_key_def_meta:nnn #1#2#3
5731 {
5732   \bool_lazy_or:nnTF
5733   { \keys_if_exist_p:nn { enumext / #1 } {#2} }
5734   { \keys_if_exist_p:nn { enumext / enumext* } {#2} }
5735   { \msg_error:nnn { enumext } { already-defined } {#2} }
5736   {
5737     \keys_define:nn { enumext / #1 }
5738     {
5739       #2 .meta:n = {#3},
5740       #2 .value_forbidden:n = true
5741     }
5742   }
5743 }
5744 \cs_generate_variant:Nn \__enumext_key_def_meta:nnn { V }

```

(End of definition for `\setenumextmeta`, `\__enumext_key_set_meta:nnn`, and `\__enumext_key_def_meta:nnn`. This function is documented on page 6.)

### 13.53 The command `\foreachkeyans`

The command `\foreachkeyans` will execute a *loop* over the *prop list* and return its contents. The implementation code is adapted from the answer provided by Enrico Gregorio (@egreg) in [Expand a .cs defined by key inside the function](#).

#### `\foreachkeyans`

```

\__enumext_parse_foreach_keys:nn
\__enumext_parse_foreach_keys:n
\__enumext_foreach_keyans:nn
\__enumext_foreach_add_body:n

```

We define a set of `<keys>` for command and we will save the default values of these in `\g__enumext_foreach_default_keys_tl` to avoid the use of group.

```

5745 \keys_define:nn { enumext / foreach }
5746 {
5747   before .tl_set:N = \l__enumext_foreach_before_tl,
5748   before .value_required:n = true,
5749   after .tl_set:N = \l__enumext_foreach_after_tl,
5750   after .value_required:n = true,
5751   start .int_set:N = \l__enumext_foreach_start_int,
5752   start .value_required:n = true,
5753   stop .int_set:N = \l__enumext_foreach_stop_int,
5754   stop .value_required:n = true,
5755   step .int_set:N = \l__enumext_foreach_step_int,
5756   step .value_required:n = true,
5757   wrapper .cs_set_protected:Np = \__enumext_foreach_wrapper:n #1,

```

```

5758     wrapper .value_required:n = true,
5759     sep      .tl_set:N = \l__enumext_foreach_sep_tl,
5760     sep      .value_required:n = true,
5761     unknown .code:n = { \l__enumext_parse_foreach_keys:n {#1} }
5762   }
5763   \keys_precompile:nnN { enumext / foreach }
5764   {
5765     before={},after={},start=1,step=1,stop=0,wrapper=#1,sep={; }
5766   }
5767   \l__enumext_foreach_default_keys_tl

```

Functions for handling unknown  $\langle keys \rangle$ .

```

5768   \cs_new_protected:Npn \l__enumext_parse_foreach_keys:nn #1#2
5769   {
5770     \tl_if_blank:nTF {#2}
5771     {
5772       \msg_error:nnn { enumext } { for-key-unknown } {#1}
5773     }
5774     {
5775       \msg_error:nnnn { enumext } { for-key-value-unknown } {#1} {#2}
5776     }
5777   }
5778   \cs_new_protected:Npn \l__enumext_parse_foreach_keys:n #1
5779   {
5780     \exp_args:NV \l__enumext_parse_foreach_keys:nn \l_keys_key_str {#1}
5781   }

```

We create the command.

```

5782   \NewDocumentCommand \foreachkeyans { +0{ } m }
5783   {
5784     \l__enumext_foreach_keyans:nn {#1} {#2}
5785   }

```

Finally the internal functions  $\l__enumext_foreach_keyans:nn$  and  $\l__enumext_foreach_add_body:n$  will loop through the prop list and print the contents.

```

5786   \cs_new_protected:Npn \l__enumext_foreach_keyans:nn #1 #2
5787   {
5788     \tl_use:N \l__enumext_foreach_default_keys_tl
5789     \keys_set:nn { enumext / foreach } {#1}
5790     \tl_set:Nn \l__enumext_foreach_name_prop_tl {#2}
5791     \prop_if_exist:cF { g__enumext_#2_prop }
5792     {
5793       \msg_error:nnn { enumext } { undefined-storage-anskey } {#2}
5794     }
5795     \int_compare:nNt { \l__enumext_foreach_stop_int } = { 0 }
5796     {
5797       \int_set:Nn \l__enumext_foreach_stop_int
5798       { \prop_count:c { g__enumext_#2_prop } }
5799     }
5800     \seq_clear:N \l__enumext_foreach_print_seq
5801     \int_step_function:nnnN
5802     { \l__enumext_foreach_start_int }
5803     { \l__enumext_foreach_step_int }
5804     { \l__enumext_foreach_stop_int }
5805     \l__enumext_foreach_add_body:n
5806     \seq_use:NV \l__enumext_foreach_print_seq \l__enumext_foreach_sep_tl
5807   }
5808   \cs_new_protected:Npn \l__enumext_foreach_add_body:n #1
5809   {
5810     \seq_put_right:Ne \l__enumext_foreach_print_seq
5811     {
5812       \exp_not:V \l__enumext_foreach_before_tl
5813       \l__enumext_foreach_wrapper:n
5814       {
5815         \prop_item:cn { g__enumext_ \l__enumext_foreach_name_prop_tl _prop }{#1}
5816       }
5817       \exp_not:V \l__enumext_foreach_after_tl
5818     }
5819   }

```

(End of definition for  $\backslash foreachkeyans$  and others. This function is documented on page 19.)
